[a] Exclusive of Alaska and islands belonging to the United States. [b] Census figures. [c] True valuation of real and personal property. [d] 1904. [e] Total debt prior to 1855. [f] Figures for the years 1800 to 1850 include the total public debt. [g] Gold and silver can not be stated separately prior to 1876. From 1862 to 1875, inclusive, gold and silver were not in circulation except on the Pacific coast, where it is estimated that the average specie circulation was about $25,000,000, and this estimate is continued for the three following years under the head of gold. After that period gold was available for circulation. [h] Total specie in circulation. Gold and silver not separately stated prior to 1876. [i] As the result of a special investigation by the Director of the Mint, a reduction of $135,000,000 was made in the estimate of gold coin in circulation on July 1, 1907, as compared with the basis of previous years. [j] Includes notes of Bank of United States; State-bank notes; demand notes of 1862 and 1863; fractional currency, 1863 to 1878; Treasury notes of 1890, 1891 to date; and currency certificates, act of June 8, 1872, 1892 to 1900. [k] 1905. [l] Exclusive of neighborhood industries and hand trades, included in previous years. [m] "Net ordinary receipts" include receipts from customs, internal revenue, direct tax, public lands, and "miscellaneous." [n] "Net ordinary expenses" include expenditures for War, Navy Indians, pensions, interest, and "miscellaneous." [o] Imports for consumption after 1860. [p] Domestic exports only after 1860. [q] Includes mules. [r] Doctor Soetbeer's estimate averaged for the period. [s] Estimated by the Director of the Mint. [t] 1814. [u] 1906. [v] Last six months of 1891. [w] 1845. [x] Andrew's Colonial and Lake Trade. [y] Western Union to 1880; includes Postal Telegraph after 1880. [z] Not including messages sent by Western Union over leased wires or under railroad contracts. [1] 1810 to 1860, inclusive, from census of 1880. [2] 1828. [3] After 1869, from Rowell's Newspaper Directory. [4] 1820 to 1850, includes aliens not immigrants; 1820 and 1830, years ending September 30; 1850, fifteen months ending December 31; 1840 and 1860, calendar years; after 1860, fiscal years.

COMMERCIAL AMERICA IN 1907.

INTRODUCTION.

AMERICAN COMMERCE.

The object of this study of American commerce is to present in concise form a statement of the commercial conditions in the various countries of all America. It has been deemed proper to include also brief statements of area, population, products, and productive capacities; transportation, present and prospective; and other subjects closely allied to commerce, with the thought that the information would not only be required by those desiring to study at the present moment economic conditions in these countries, but also be useful to general students; and the purpose has been to bring down to the latest available date facts of this character regarding all countries of the Western Hemisphere. The statement with reference to the United States has been made in general outlines only, since the details are presented in other publications of this Bureau, notably the Statistical Abstract of the United States and Commerce and Navigation of the United States, issued annually and to be obtained on application by any one desiring more detailed information on the commerce of the United States than is given in this work.

The total commerce of all America, as compiled for the latest available year, amounted to $5,544,608,000, of which $3,025,272,000 was that of the United States and the remaining $2,519,336,000 was distributed among the other countries of North, South, and Central America, and the West Indies, as is shown in Tables 1 and 2, on pages 6 and 7.

Considering the imports and exports separately, the total imports of all American countries amounted to $2,262,239,000, of which $1,144,421,000 was the value of imports into the United States, the remaining $1,117,818,000 being distributed among the other American countries. The total exports of all American countries were $3,282,369,000, of which $1,880,851,000 were from the United States, the remaining $1,401,518,000 being exported from the various other American countries.

Of the $1,117,818,000 representing the total imports of all American countries other than the United States, $407,003,000, or 36.4 per cent, was drawn from the United States; of the $1,401,518,000 representing the total exports of all American countries other than the United States, $455,228,000, or 32.5 per cent, was sent to the United States.[a]

A comparison of conditions of our trade with North and South America, respectively, indicates that a much larger share of the trade of the North American countries is carried on with the United States than of the South American countries. The total imports of all North American countries other than the United States (including in this term Central America and the West Indies) were in the latest available year $593,615,000, of which $334,448,000, or 56.3 per cent, was from the United States; and the total imports of the South American countries were $524,203,000, of which $72,555,000, or 13.8 per cent, came from the United States. The total exports of all North American countries other than the United States were in the latest available year $593,881,000, of which $312,582,000, or 52.6 per cent, went to the United States; the total exports of all South American countries were $807,637,000, of which $142,646,000, or 17.6 per cent, went to the United States.

TRADE OF THE UNITED STATES WITH OTHER COUNTRIES OF AMERICA.

The trade of the United States with other American countries has been an object of special interest and solicitude to our statesmen and economists. In spite of the close political and geographical proximity to the countries lying south of the United States within the same hemisphere, our trade, especially with the countries lying south of Mexico and Central America, constitutes a comparatively small fraction of their entire foreign trade. On the northern continent we have been more successful. To Canada the United States furnished, in 1906, 60.6 per cent of her total imports for consumption, and to Mexico nearly 65.9 per cent. These are the only large countries which take more than half of their imports from the United States. As we proceed farther south, the share of the commerce of the United States gradually diminishes. Thus, to the Central American States we supplied 49 per cent of their total imports, although individually five of the seven Central American States get from one-half to two-thirds of their imports from the United States; to Colombia, a little farther removed, but equally accessible by water, we sent 44 per cent of her imports; to Venezuela, similarly situated, we sent 30 per cent, and to the British West Indies 32 per cent. We furnished 30 per cent of the total imports of British Guiana, 21 per cent of those of Dutch Guiana, and less than 9 per cent of those of French Guiana. All the South American countries thus far mentioned either border on the Caribbean Sea or lie very near it, and the United States controls a considerable portion of their foreign trade; but the combined commerce of all these countries represents a very small portion of the entire South American commerce. Of the total imports of all South America, only 6 per cent is taken by the countries bordering on the Caribbean Sea or lying very near it, as do the Guianas and Venezuela.

Taking up the South American countries lying still farther south, we find our share in their trade to be very much smaller, as follows: To Brazil we furnished a little over 11 per cent of her total imports, valued at over $161,000,000 in 1906; to Uruguay and Paraguay, 9 per cent of their imports, worth $25,500,000 in 1904; to Argentina 14 per cent of a total valued at $198,000,000 in 1905. Our position is no better on the west coast. We furnished 10 per cent of the total imports into Chile ($69,000,000), 8 per cent of the imports into Bolivia ($8,900,000), 16 per cent of the imports into Peru ($21,100,000), but 29 per cent of the imports into Ecuador ($7,700,000), which of all countries of western South America lies nearest to the United States. The relative insignificance of our trade with South America is best brought out by a comparison

[a] A similar computation, made in the first edition of this monogaph (issued in 1906), gave the following results: Total imports of all American countries other than the United States, $1,005,242,000, of which $355,391,000, or 35.4 per cent, came from the United States; total exports of all American countries, $1,238,666,000, of which $431,145,000, or 34.8 per cent, was sent to the United States. A comparison of all the results of these two computations seems to indicate an increasing share of the United States in the imports of the other American countries and a decreasing share in the exports of these countries. This increase in the per cent of imports was mainly caused by the growth of trade with North American countries (from 54.7 per cent to 56.3 per cent), while the share of the United States in the imports of South American countries increased from 13.5 to 13.8 per cent only.

between our exports to South America and our total exports. Thus, in 1870, our exports to South America were over 4 per cent of our total exports of merchandise; in 1880 less than 3 per cent; in 1890 less than 5 per cent, and in 1900 less than 3 per cent. Since then some improvement has been noticeable, the proportion in 1907 being nearly 4.5 per cent.

SOME OF THE CAUSES OF SMALL TRADE WITH SOUTH AMERICA.

This situation may be partly explained by the fact that South America has not offered as convenient a market for our products as the other parts of the world, particularly Europe. Its population amounts at present to less than 45 millions, and it produces immense quantities of agricultural products, which have hitherto constituted the principal items in our own export trade. It is therefore not surprising that the southern continent has not offered as profitable an outlet for the surplus products of our farms and mines as the countries lying to the east of us in the Northern Hemisphere.

A study of the geographical relations of South America to the United States and Europe seems to offer additional explanation of our comparative failure in the southern continent. The commerce of the world reaching Brazil (south of the Amazon), Uruguay, Paraguay, and Argentina, on the Atlantic coast; and Chile, Peru, Ecuador, and the interior State of Bolivia, on the west, must reach them by water, and their sales to other parts of the world must also go by water. In this respect, however, the markets of Europe are practically as near to all of South America fronting on the Atlantic and Pacific as are those of the United States. This may seem a startling statement to the casual observer, but an examination of the map and of the distances actually traveled by the great steamships following the usual course of commerce between the countries in question will bear it out. The easternmost point of South America extends 2,600 miles farther east than New York, and the sailing distance from that point to New York is actually greater than that to the cities of southern Europe, and but slightly less than to the principal commercial cities of England and Germany, our greatest commercial rivals. This fact of itself would place the United States upon practically an equal footing with Europe in the matter of proximity alone; but when it is considered that nearly all of the steamship lines entering the ports of South America are controlled by European capital and European interests, it is not surprising that a large share of the commerce of those countries is diverted to Europe. Naturally a considerable share of their exports goes direct to Europe, and to that extent it would be quite reasonable to expect that their purchases would be from that part of the world.

Since the exports from the United States to Europe greatly exceed the imports from Europe into the United States, it becomes practicable for the vessels bringing rubber, coffee, hides, and wool from South America to the United States to load at our ports with grain or provisions for Europe, and there load again with goods for the South American markets, thus describing a triangle, of which the line from New York to British ports forms the base and the ports of Brazil and Argentina the apex. That this should occur under ordinary conditions would not be surprising, and that it should occur with lines of steamships controlled almost exclusively by European capital in the interests of European trade is to be expected. In addition to this, many other difficulties lie in the way of the proper development of trade between the United States and South America—banking and business facilities for direct communication with the United States are lacking; a close study of the trade methods and requirements of the South American countries has scarcely been made by the American merchants, and very few efforts are made to solicit trade in the language of the country where business is sought. Thus most valuable aids in stimulating commercial intercourse, and especially increasing our sales to the countries in question, are sadly lacking. That more frequent and direct steamship communication is an important factor in developing commerce with countries which can be reached only by steamship lines is evidenced by the more rapid growth of our exports to the countries fronting upon the Caribbean Sea, with which fairly satisfactory steamship connections now exist. This suggests the advantages which may be expected to accrue to our trade with at least the western coast of South America when an Isthmian Canal shall afford Ecuador, Peru, Bolivia, and Chile as direct communication with ports of the United States as countries fronting upon the Caribbean now possess. With a steamship route to western South America by way of the Isthmus, the completion of the trans-Andean road connecting western South America at Valparaiso with eastern South America at Buenos Aires and Montevideo, and increased steamship facilities between our ports and those of both coasts of South America, the manufacturers and producers of the United States may reasonably expect to increase their sales in those markets. At present their exports to those markets are but little more than one-half as large as their imports from them.

[a] Including gold and silver.
[b] Estimate, based upon value of exports into United States, United Kingdom, France, and Germany from Haiti.
[c] Imports into United States.
[d] Estimated. Exports of St. Croix, $483,671; exports of St. Thomas not stated, but probably equal to those of St. Croix.

SHARE OF PRINCIPAL COUNTRIES IN THE MARKETS SOUTH OF THE UNITED STATES.

The value of merchandise imported into the countries lying south of the United States is about 815 million dollars, according to the latest data. Of this about 230 millions is supplied by the United States, 160 millions by the United Kingdom, 75 millions by Germany, 50 millions by France, 33 millions by Italy, and 27 millions by Spain, the remainder being largely commerce between countries composing the group. Thus, about 575 millions of the 815 million dollars' worth of merchandise imported by all America south of the United States is drawn from the United States, the United Kingdom, Germany, France, Italy, and Spain, and a larger share from the United States than from any other country. Of the 815 million dollars' worth of merchandise imported into the countries south of the United States about 500 million dollars' worth, or approximately two-thirds of the total, consists of manufactures, which include cotton manufactures valued at over 100 million dollars; iron and steel manufactures, including machinery, nearly 100 millions; wood and manufactures thereof, 25 millions; manufactures of wool, a little more than 20 millions; leather and manufactures thereof, 15 millions; and agricultural implements, over 7 millions. Of cotton goods, the largest single group, the United Kingdom supplied, in 1904, 56 million dollars' worth, the United States 16 millions, Germany 12 millions, Italy nearly 9 millions, France 5½ millions, and Spain 4 millions. Thus, the United States, although the largest cotton producer of the world, supplied but about one-sixth of the cotton goods imported into the countries in question, and the United Kingdom considerably more than one-half. The share supplied by the United States is, however, something of an improvement upon the situation ten years earlier, when this country supplied only about one-ninth of the 75 million dollars' worth of goods then imported into the countries in question, while the United Kingdom at that time supplied nearly two-thirds of the total.

A comparison of the figures of cotton goods exported from the various cotton-manufacturing countries to the countries south of the United States in 1904 with those of 1894 shows that the exports of cotton goods from the United States to these countries grew from 8½ million dollars to a little over 16 millions, those of the United Kingdom from 46½ millions to 56 millions, those of Germany from about 7 millions to about 12¼ millions, those of Italy from a little less than 2 millions to nearly 9 millions, those of France from a little less than 5 millions to a little less than 6 millions, while those of Spain fell from 6⅓ millions to 4 millions.

In iron and steel manufactures the United States is doing better in the countries under consideration than in cotton manufactures. Of the practically 100 million dollars' worth of iron and steel manufactures exported to those countries in 1904, 36 millions, or more than one-third, was from the United States, 32 millions from the United Kingdom, about 18 millions from Germany, and 2½ millions from France.

Of the wood manufactures, valued at 25 million dollars, exported to the countries in question the United States supplied about 16 millions and Italy 6½ millions. Of the wool manufactures, amounting to about 21 millions, 11½ millions were from the United Kingdom, 5¼ millions from Germany, 3 millions from France, and but half a million from the United States. Of the 7½ million dollars' worth of agricultural implements 6¼ millions were from the United States. Coal imports into the countries in question amounted to about 20 million dollars in value, and of this 13 millions was from the United Kingdom and 5½ millions from the United States.

EXPORTS FROM COUNTRIES SOUTH OF THE UNITED STATES.

The total exports from this territory amounted, according to the latest available information, to 1,130 million dollars, of which about 355 million dollars' worth went to the United States. The United Kingdom occupies the second place as a purchaser of Latin-American goods, with about 210 million dollars annually; Germany and France follow, with about 178 and 108 million dollars, respectively, while Italy and Spain, coming next in order, receive no more than 12 to 14 million dollars' worth of merchandise each. Thus, the six countries enumerated absorb about 900 million dollars' worth, or two-thirds of the total exports from Latin America, while the greater portion of the remaining third probably belongs to the trade of the Latin-American countries among themselves. As is natural for countries of recent economic development, the bulk of the exports consists of a comparatively small number of foodstuffs or raw materials. Thus, in 1904, for which year a careful compilation has been made, the following articles occupy important positions in the exports of American countries south of the United States: Cereals, 110 million dollars, against 34 million dollars in 1894; coffee, 140 million dollars, against 154 million dollars a decade earlier; sugar, 96 million dollars; rubber and gutta percha, 67 million dollars; hides and skins, 54 million dollars; wool, 84 million dollars; copper ore and metal, 30 million dollars, and cocoa, 24 million dollars. These figures include the exports from Latin America only to the six countries above mentioned. The eight groups of merchandise enumerated thus represented a value of over 600 million dollars, or about two-thirds of the total exports to those countries.

In the distribution of these various products considerable difference may be found between the United States and the main European countries as markets for South American goods, this country taking nine-tenths of the Latin-American sugar, more than half of the coffee, and about one-half of its rubber and its copper ore; while the United Kingdom takes two-thirds of its cereals, almost 90 per cent of its provisions, and comparatively little of its coffee or its sugar. Germany also takes large quantities of the South American cereals, over 30 million dollars' worth of South American coffee, about 25 million dollars' worth of the wool, and 20 million dollars' worth of the hides and skins. France again takes almost half of the entire exports of Latin-American wool and large quantities of coffee and cocoa. Accordingly, the distribution of the main products of Latin-American industry may in a general way be indicated thus: Its sugar and its copper go mainly to the United States; its coffee and its hides and skins to the United States, Germany, and France; its cereals and provisions mainly to the United Kingdom and to some extent to Germany; and its wool to Germany and France.

These generalizations are obtained from a series of tables on page 118, showing the exports by principal articles from the United States, United Kingdom, Germany, France, Italy, and Spain to the countries south of the United States in 1894 and in 1904; and from a similar statement with reference to imports into the United Kingdom, Germany, France, Italy, and Spain from the countries south of the United States.

ORDER IN WHICH COUNTRIES ARE ARRANGED IN THIS STUDY.

American commerce has been considered as a whole in this discussion, and in analyzing that commerce it has been found convenient, though somewhat unusual, to arrange the countries in alphabetical order without reference to the section of the hemisphere in which they are located. This will give to those desiring to study conditions in the various countries opportunity to readily determine the relative position of any country in the great group forming all America. In this arrangement of countries the British, French, and other colonies in the West Indies have been grouped under the general head of "West Indies," those in Guiana under the head of "Guianas," and the Central American States and British Honduras under the general head of "Central American Republics."

Following the text discussion are tables showing the commerce of each country. These tables are also arranged alphabetically with reference to the countries whose commercial statistics they present.

Tables 1 and 2, on pages 6 and 7, show the total imports and total exports of America by countries and the share of the United States in the import and export trade, respectively, of each of the countries named.

ARGENTINA.

[Area, 1,136,000 square miles; population in 1903 estimated at 5,005,853.]

The total commerce of Argentina in 1905 was $509,518,000, of which $197,974,000 were imports and $311,544,000 exports. Of the imports 14.1 per cent was drawn from the United States, and of the exports 4.9 per cent was sent to the United States. The official figures of the United States with reference to its trade with Argentina show that the imports from that country have grown from $5,401,697 in 1890 to $8,114,304 in 1900 and $16,715,325 in 1907, and the exports thereto from $8,887,477 in 1890 to $11,558,237 in 1900 and $32,163,336 in 1907, these being fiscal-year figures in all cases.

AGRICULTURE.

Agriculture and stock raising is the chief industry of the country, and Argentina's wheat figures are an important factor in the world's grain markets. The land under cultivation was, in 1895, 4,892,005 hectares (over 12,000,000 acres); according to an estimate of the Argentina department of agriculture this area had increased to about 10,000,000 hectares, or double, in 1904; yet that area constituted less than one-tenth of the total arable land fit for cultivation, the latter being estimated at 104,300,000 hectares (257,700,000 acres). In addition, there are over 100,000,000 hectares which can so far be utilized only for stock breeding, and more than 90,000,000 hectares under forests and on mountains containing immense wealth in lumber and minerals. According to the returns of the Argentina department of agriculture, the area under cultivation in the agricultural year 1902–3 was 9,114,616 hectares (22,522,216 acres). The area under wheat more than trebled from the year 1891 to 1903, under corn more than doubled, and under alfalfa nearly trebled, etc. The production of cereals and linseed occupies about three-fourths of the total area under cultivation and is concentrated in the central portion of the country comprised within the provinces of Buenos Aires, Santa Fe, Cordova, Entre Rios, and in the territory of Pampa, which are especially favored by climatic conditions and proximity to the Atlantic ports. The cultivation of wheat, corn, and linseed is constantly increasing, the wheat area alone having reached 5,145,399 hectares (12,714,281 acres) in 1904–5, exceeding the total area under cultivation of all crops in Argentina for 1895, which was 4,892,005 hectares (12,088,144 acres). The linseed area has increased to 1,268,556 hectares (3,134,602 acres) and the corn area to 2,106,819 hectares (5,205,950 acres) in 1903–4.

The cultivation of cotton, though of very recent origin, gives some promise, and the northern territories and provinces of Argentina, especially those of El Chaco and Misiones, favored by their subtropical situation, bid fair to become important sources of the world's cotton supply. At present, however, the production of cotton is quite insignificant, having increased from 17 bales in 1902 to 495 bales in 1905. In addition to cotton there are also found indigenous textile plants known under the names of chaguar, caraguata, and palma caranday, which cover enormous areas and furnish valuable fiber.

There is also considerable production of sugar cane, which is likewise confined to the northern states. It was originally cultivated in the province of Tucuman, and gradually extended to the provinces of Santiago, Salta, and Jujuy, and is at present being introduced also in Chaco, Formosa, and Misiones. It is already beginning to furnish a surplus for export, which amounted to nearly 50,000 tons in 1901, when the total production exceeded 165,000 tons. The average yield per hectare varies between 25,000 and 35,000 kilos (55,000 to 77,000 pounds), occasionally rising to 46,000 kilos, or 101,000 pounds.

The production of the main agricultural articles in Argentina during the last decade is shown in the following table:

TABLE 3.—ANNUAL PRODUCTION OF CORN, WHEAT, TOBACCO, FLAXSEED, AND SUGAR IN ARGENTINA, 1895–1906.[a]

YEARS.	Corn.	Wheat.	Tobacco.	Flaxseed.	Sugar.[b]

1904	175,189,000	129,672,000	31,000,000	36,912,000	128,104
1905	140,708,000	150,745,000	43,000,000	29,133,000	137,308
1906	194,912,000	134,931,000	(c)	32,509,000	120,000

[a] From Yearbooks of the Department of Agriculture.
[b] Sugar year beginning June.
[c] No data available.

The following figures show the growth in the exports of the principal agricultural products of Argentina in ten years:

TABLE 4.—EXPORTS OF PRINCIPAL AGRICULTURAL PRODUCTS OF ARGENTINA IN 1895, 1900, AND 1905.

ARTICLES.	1895	1900	1905
Wheat ... bushels	37,121,000	70,903,000	105,391,000
Wheat flour ... barrels	607,000	376,000	1,628,000
Corn ... bushels	30,405,000	28,079,000	87,488,000
Linseed ... metric tons	276,000	223,000	655,000
Sugar ... pounds	185,000	33,444,000	4,848,000

The forests of Argentina abound in rare and valuable species of timber, such as quebracho, jacaranda, lapacho, rosewood, and other dyewoods. The export of wood products in 1905 were valued at nearly 6½ million dollars gold, of which the quebracho extract furnished $2,343,000 and quebracho logs $4,125,000.

The stock-breeding industry of Argentina is no less important than the cultivation of cereals and other agricultural products. The following table shows the number of live stock at the time of the taking of the last two censuses, and the estimated number in 1901:

TABLE 5.—LIVE STOCK IN ARGENTINA IN 1888, 1895, AND 1901.

KINDS.	Census of 1888.	Census of 1895.	1901 (estimated).
	Number.	*Number.*	*Number.*
Cattle	21,961,657	21,701,526	30,000,000
Horses	4,234,032	4,446,859	5,600,000
Asses and mules	417,494	483,369	500,000
Sheep	66,706,097	74,379,562	120,000,000
Hogs	393,758	652,766	800,000
Goats	1,894,386	2,748,860	3,100,000

Sheep raising is one of the most important branches of the animal industry. The sheep are grown principally for their wool and constitute a very important factor in the wool supply of the world. In 1870 the wool product of Argentina amounted to 130 million pounds, in 1891 to 310 million pounds, and in 1900 had grown to about 500 million pounds. The total quantity of wool entering into international trade has been computed by the United States Department of Agriculture at 1,671 million pounds in 1901, of which Argentina furnished 503 million pounds, or 30 per cent. In 1904 the total quantity exported from all countries decreased to 1,538 million pounds, of which 372 million pounds, or 24 per cent, came from Argentina. This, however, was a year of unusually small wool exports from Argentina, which thus furnishes from one-fourth to one-third of all wool entering the international trade.

Three-fourths of the wool produced is of white-faced long-wool sheep, one-fifth of merino, and about 5 per cent of black-face sheep. Sheep are also raised for slaughter, furnishing not only all the mutton used in the country, but also increasing shipments to foreign countries. In 1904, over 195 million pounds of mutton and 215 million pounds of frozen beef were shipped out of Argentina.

MANUFACTURES.

The manufacturing industries of Argentina, which gave employment to about 168,000 people in 1895, the last census year, and represented an investment of nearly 285 million dollars, are chiefly carried on for the supply of domestic wants, only the meat-packing industry furnishing a considerable contribution to the export trade. In 1903 five large freezing establishments were engaged in shipping meats to the United Kingdom; more meat-packing plants have been added since then, and with the completion of the factories in course of construction the capacity of the Argentine industry was expected to reach 850,000 cattle and 12 million sheep per annum. Among the other important industries are flour mills, distilleries, sugar refineries, and wine-making establishments, all of which have been producing a surplus for the export trade. The total investment in manufacturing and the number of persons employed have greatly increased since 1895, the date of the census above quoted.

The direction taken by Argentine industry has been in the line of building up those branches of manufacture for which the country is excellently equipped with raw materials. This is true of flour mills, meat-packing establishments, sugar refineries, breweries, distilleries, etc., all of which not only supply the needs of the country, but furnish increasing surplus quantities for export. There are also industries with considerable numbers of employees, and representing large investments of capital, which are satisfying to an increasing extent the needs of the people for clothing, footwear, furniture, and household goods, metallic products, chemicals, etc. Electric lighting and gas plants are also increasing in number and are largely in foreign hands. All this has had its effect on the character of the export trade.

TABLE 6.—EXPORTS FROM ARGENTINA IN 1872, 1895, AND 1905, BY CLASSES OF PRODUCTS.

PRODUCTS OF—	1872		1895		1905	
	Dollars.	*P. ct.*	*Dollars.*	*P. ct.*	*Dollars.*	*P. ct.*
The animal industry	41,823,100	94.8	72,018,000	62.1	136,106,481	43.7
Agriculture	94,600	.2	39,999,000	34.5	164,222,002	52.7
All other industries	2,250,400	5.0	3,850,000	3.4	11,160,823	3.6
Total	44,139,100	100.0	115,867,000	100.0	311,544,307	100.0

The above table shows that while the value of animal products constituted nearly 95 per cent of the entire export trade of the country in 1872, and more than trebled within thirty-three years, it amounted to less than two-thirds of the total exports in 1895 and but 43.7 per cent in 1905. On the other hand, the share of agricultural products in the total exports has increased from about one-fifth of 1 per cent to more than one-half of the total exports, the entire development of Argentine agriculture having been accomplished within these three decades. Manufactured products furnished only 3½ per cent of the total export trade in 1905, as against 5 per cent in 1872, but this must not obscure the fact that the exports of manufactured articles have increased from 2¼ million dollars to more than 11 million dollars.

COMMERCE.

A comparison of the import and export figures for the period 1891–1905 shows that while in 1891 the exports exceeded the imports by nearly 35 million dollars, in 1905 the exports exceeded the imports by more than 113 million dollars. During this period the imports trebled, increasing from nearly 65 million dollars to 198 millions, or over 200 per cent, while the exports increased from nearly 100 millions to 312 millions, or 212 per cent.

The United Kingdom, which enjoys the largest share of the import trade, sent to Argentina in 1905 merchandise worth 66 million dollars, or one-third of the total imports. Next in order of importance is Germany, the imports from which in 1905 exceeded 28 million dollars in value, closely followed by the United States, from which Argentina imported commodities worth nearly 28 million dollars. The only other countries of importance in the import trade of Argentina are France, with over 20 million dollars, and Italy, with 19½ million dollars. Until a few years ago the imports from the United Kingdom were greater than those from the United States, Germany, and France combined. In the last few years, however, the relative share of the British trade in Argentina has been gradually declining, and those of the United States, Germany, and France have been increasing, as shown by the following table:

TABLE 7.—PERCENTAGES OF TOTAL IMPORTS INTO ARGENTINA COMING FROM THE UNITED STATES, GERMANY, FRANCE, AND THE UNITED KINGDOM, 1890, 1894, 1898, 1902, AND 1905.

COUNTRIES.	1890	1894	1898	1902	1905
	Per ct.	*Per ct.*	*Per ct.*	*Per ct.*	*Per ct.*
United States	6.5	10.9	10.4	12.9	14.3
Germany	8.6	11.5	11.7	12.8	14.4
France	14.0	10.9	9.9	9.0	10.5
All three countries	29.1	33.3	32.0	34.7	39.2
United Kingdom	40.6	35.8	36.3	36.0	33.8

The growth of imports from the principal countries with which Argentina is doing business is shown in Table 8. The annual average for a five-year period is taken to avoid accidental fluctuations from year to year.

This table shows that while the imports from the United States have increased over 60 per cent, those from Germany advanced only 50 per cent, from England 24 per cent, and from France less than 26

per cent. From being fourth in the order of importance in the five-year period from 1896 to 1900, the United States advanced to the third place in the following quinquennial period, leaving Italy behind and being next to Great Britain and Germany, yielding the second place to the latter only by the very small margin of $397,000.

TABLE 8.—AVERAGE ANNUAL IMPORTS INTO ARGENTINA, 1896–1900 AND 1900–1905, BY PRINCIPAL COUNTRIES.

Italy	12,484,000	15,655,000	25.3

[a] Decrease.

The principal imports of Argentina are textiles and wearing apparel, various manufactures of iron and steel, pottery, glass, food products, manufactures of wood, beverages, chemicals, minerals and oils, paper, and tobacco; in most of these, textiles being a notable exception, the United States plays an important part. In fact, as shown by Special Agent Hutchinson, of the Department of Commerce and Labor, on the basis of annual averages for the five-year period, 1899–1903, the United States took first rank in four of the important classes of Argentine imports, viz, agricultural machinery and implements, sewing machines, cordage and twine, and scientific instruments; the United States ranked second in five classes of Argentine imports—machinery other than agricultural and sewing machines, iron and steel wire, builders' hardware, railway and street cars, chemicals and drugs. In five of the important classes of imports the United States ranked third or lower. The following tables show the relative positions of the principal countries from which goods were imported into Argentina:

[a] Decrease.
[b] The figures for Italy include straw goods, about one-third of the total.

The merchandise covered in the above table includes 90 per cent of the imports of Argentina from the United States and 60 per cent of the total imports of Argentina from foreign countries. The remaining 40 per cent of Argentine purchases from abroad include articles of which the United States supplies but little or nothing, such as coal, wines, porcelain, and other products.

As regards exports, the United Kingdom again figures as the most important purchaser from Argentina, being credited with more than 43 million dollars' worth of Argentina's exports in 1905. As a matter of fact, however, the exports to the United Kingdom are really much larger, since a large portion of the cereals shipped from Argentina to St. Vincent and Las Palmas "for orders" usually finds its way to that country. Thus, according to the estimate of the Argentine consul-general at London, the exports from the Republic to the United Kingdom in 1903 amounted to about 95 million dollars, as compared with the official figures which credited that country with only 35 millions. Next in order of importance among

Argentina's customers, according to the Argentine figures, is France with over 36 million dollars in 1905, followed by Germany with $35,761,000 worth, and Belgium with 20 million dollars' worth. It is probable, however, that a very large part of the exports to Belgium find their way ultimately to Germany, which would in that case rank second in order of importance, leaving France behind. The United States was credited in 1905 with more than 15 million dollars' worth of Argentina's exports, which is the largest figure on record in the history of trade relations between the two Republics, being more than double the figure of ten years ago. Argentina buys more from the United States than it sells to this country. The principal exports of Argentina are cereals, linseed, animal products, and dyewoods, for which articles the demand is much greater in the European countries than in the United States. In the fiscal year 1906, the most important articles imported into the United States from Argentina were as follows: Hides and skins, $7,644,969; wool, unmanufactured, $7,427,080; chemicals and drugs, $1,140,718, and tanning materials, $1,198,391; these constituting almost 95 per cent of the entire imports from Argentina into the United States. The course of the export trade in the principal products of Argentina in the twelve years ended 1905 will be seen from the following figures:

TABLE 10.—PRINCIPAL EXPORTS FROM ARGENTINA IN 1894 AND 1905.

Hay	440,000	773,000

The annual exports of Argentina have been regularly in excess of the imports since 1894. Previous to that the imports usually exceeded the exports. This may be explained by the facts (1) that the industries of Argentina are to an increasing extent satisfying the immediate wants of its people; (2) that its rapidly increasing population is furnishing a larger and larger surplus of agricultural products in excess of its own immediate needs; (3) that in the previous years a considerable part of the large imports represented investment of foreign capital in railways and manufacturing enterprises which reached the country in the form of steel rails, railway rolling stock, machinery, and other equipment required by railways and industrial plants, which were almost entirely imported from the countries which furnished the capital. A great part of the excess of exports represents now the interest on the investment which the foreign capitalists are deriving from Argentina, as well as the payment of interest and principal on the public debt held in Europe.

Detailed statements of the foreign trade of Argentina, both by countries and by articles, for a series of years, will be found on pages 73, 84, and 85, in the statistical appendix.

TRANSPORTATION.

Steamships and sailing vessels.—The shipping service of Argentina is rapidly developing, following the growth of her foreign trade, and a considerable number of vessels carry the Argentine flag. In 1869 there were 1,698 sailing vessels and steamships flying the Argentine flag; in 1895 the number had increased to 2,654. The progress in shipbuilding resulting in the building of larger steamers, the tonnage increased even to a larger extent, viz, from 151,177 tons in 1869 to 368,634 tons in 1895, an increase of 144 per cent. In 1895 there were 406 steamers, with a tonnage exceeding 190,000—more than one-half of the total tonnage of the country for that year. More than 66 per cent of the steamers and 88 per cent of the sailing vessels carried the Argentine flag. The growth of the foreign shipping of Argentina is shown by the following figures: In 1890, 11,847,424 tons; 1900, 13,364,884 tons; 1904, 18,648,389 tons. The proportion between the oversea trade and the coastwise and river trade will be seen from the following figures for 1904:

TABLE 11.—TONNAGE MOVEMENT IN THE FOREIGN AND DOMESTIC TRADE OF ARGENTINA IN 1904.[a]

TRADE.	STEAM VESSELS.		SAILING VESSELS.		TOTAL.	
	Number.	Tons.	Number.	Tons.	Number.	Tons.
Entered in—						
Foreign trade	8,251	8,791,879	3,113	623,650	11,364	9,415,529
Domestic trade	11,830	5,826,054	12,169	897,998	23,999	6,724,052
Cleared in—						
Foreign trade	9,011	9,633,656	3,001	599,204	12,012	10,232,860
Domestic trade	10,937	4,956,436	12,175	896,372	23,112	5,852,808

[a] Foreign shipping includes oversea movement and also river movement to and from foreign ports. Domestic trade includes coastwise and internal river shipping.

The Government is endeavoring further to increase the steamship service with European countries by offering advantageous contracts to foreign steamship companies which will undertake to furnish quick and frequent steamship transportation between European and Argentine ports at regular intervals.

With the great expansion of the Argentine trade serious difficulties are encountered in accommodating vessels which arrive in the Argentine ports, resulting in great delays in the discharge and unloading of the vessels. This is especially true during the "rush" seasons, such as the time of the arrival of large consignments of agricultural machinery and implements to be used in harvesting the crops, and at the time of the shipments of agricultural products to European countries. It is expected that such difficulties may be overcome in the near future, as preparations are going on for the enlargement of existing dock and wharf facilities at La Plata, Bahia Blanca, and other Argentine ports.

Railways.—Argentina has shown from the beginning of its industrial development a greater appreciation of and energy in providing adequate railway facilities than any other of the Latin-American countries. In 1905 it had the largest railway mileage of any country in America south of the United States. Most of the railways of Argentina are owned by private companies, but a few lines are owned and operated by the National Government or by some of the provinces. The first railway built in Argentina, in 1854, was 12 miles long. The first extension of the railway lines was directed with a view to connecting Buenos Aires with the other principal ports of the country and to opening the rich agricultural and grazing lands of the interior. In 1870 there were 454 miles of railway connecting Buenos Aires and Rosario on the Parana River and Cordoba in the heart of the country. Between 1870 and 1880 the great trunk lines were added, leading north to Tucuman and west to Villa Mercedes, in the province of San Luis. During the following decade railroad building broke all records, the mileage in 1890 reaching 5,860 and the entire country being covered by a network of railways radiating from the three great industrial centers on the Parana River—Buenos Aires, Santa Fe, and Rosario. The railway in that year extended as far north as Salta, near the Chilean frontier on the west, reached Mendoza at the foot of the Andes, and also near the Chilean boundary on the south, and extended to the sea at Bahia Blanca. The mileage

was nearly doubled again in the succeeding decade, aggregating 10,595 miles in 1900, including a southwest extension to Neuquen and a trans-Andean road connecting Mendoza with Punta de las Vacas. In 1904 the Argentine railway system had a length of 12,000 miles, with 1,529 miles of new lines under construction and contracts signed for 4,595 miles of further railroad extension.

TARIFF.

The import tariff aims to protect the few commodities which can be produced in Argentina. It divides the imports into eleven classes, nine of which have the following duties: 5, 10, 15, 20, 30, 35, 40, 50, and 25 per cent ad valorem. A duty of 25 per cent ad valorem is levied on all goods not specially enumerated in the tariff and not exempted from duty. The 5 per cent duty is levied on a large number of products, including iron and steel wire, jewelry, electric appliances, plows, crude sulphur, raw cotton and cotton yarn, iron in bars, plates, or ingots, tin plate, wool and flax yarn, agricultural machinery, typewriters, motors, and several other products; 40 per cent ad valorem is imposed on all kinds of cloth, leather goods, iron and steel safes, footwear of all kinds, tanned hides and skins, printed matter, furniture, etc.; 50 per cent ad valorem is applied to arms and ammunition, harness, vehicles, and perfumery. The 10 per cent class includes a large number of products principally classed under foods, beverages, and tobacco, and some miscellaneous products, all of which are subject to specific duties. The eleventh class includes articles admitted free of duty; among which are animals, coal, iron and steel rails and other equipment for steam and electric railways, flour, iron and steel scrap fruits, books, locomotives, reaping and binding machines, thrashing machines worked by steam, machines for sugar refining, for ships, butter making, and several other kinds of machinery, as well as other products. It should be added that the goods subject to ad valorem rates are assigned a certain fixed value in the tariff law, thus making the rates virtually specific. These values are usually revised once a year, thus resulting in annual changes of many of the schedules in the tariff.

BOLIVIA.

[Area, 729,000 square miles; population in 1904 estimated at 2,180,000.]

The total commerce of Bolivia in 1905, the latest year for which statistics are available, was $21,926,000, of which $8,931,000 were imports and $12,995,000 exports. Of the imports, 8.4 per cent was drawn from the United States, and of the exports only about $27,000 worth was sent to the United States. The official figures of the United States with reference to its trade with Bolivia show that the imports from that country were $30 in 1890, $22 in 1900, and nothing in 1905 and 1906, while the exports thereto have grown from $11,002 in 1890 to $59,223 in 1900, and $146,798 in 1906, these being fiscal-year figures in all cases.

COMMERCE.

The commerce of Bolivia, while showing some signs of growth during the last decade, is still insignificant considering the abundant natural resources of the country. The exports averaged $10,782,000 per annum during the period of 1895–1899 and $12,388,000 during 1900–1904, showing an increase of 15 per cent. The imports for the corresponding periods averaged $5,803,000 and $6,683,000, respectively, showing an increase of 15 per cent. As compared with these figures, the trade for 1905 shows a material increase, especially as far as exports are concerned. The distribution of the Bolivian export trade can not be determined with any degree of accuracy, owing to the fact that over 90 per cent of that trade is carried on by way of Chilean and Peruvian ports, especially Antofagasta and Mollendo, and the declarations of destination are so imperfect that about 60 per cent of the exports for 1905, and even 80 per cent in 1904, are stated as shipped for "destination unknown." (See Table 12.) This impairs the value of the data in regard to the remaining share of the exports, and all that may be gathered is that the United Kingdom, France, and Germany, in Europe, and Argentina, Brazil, and Chile, in South America, absorb the greatest share of the exports from Bolivia.

[a] Compiled from Boletín de la Oficina Nacional de Inmigración: Estadística y Propaganda Geográfica, and British Diplomatic and Consular Reports, No. 3758. Conversions of the boliviano made at rates furnished by the Director of the Mint, as follows: 1900, 44.8 cents; 1901, 43.2 cents; 1902, 38.2 cents; 1903, 39.2 cents; 1904, 41.9 cents; 1905, 44.1 cents.

The figures of imports, which are of greatest importance for the commerce of the United States, are more detailed, as far as the distribution by countries is concerned. (See Table 13.) According to the official figures for 1905, Germany supplied 17.5 per cent of the total imports, Great Britain 16.5 per cent, Peru 11.4 per cent, Chile 12.3 per cent, and the United States 8.4 per cent. It is probable that the figures of the imports from the United States are underestimated, while those for Chile and Peru are overestimated. The statistics of imports into Bolivia are presented in such way as to make their careful analysis very difficult, the data being given separately for each port and by countries, but totals for individual articles are not available either by ports or by countries, or for the total import trade of Bolivia. With some difficulty the total imports of a few most important articles into Bolivia were computed for 1903, the latest year for which such figures were available, and are shown in Table 14. Wheat flour, cotton and woolen goods, alcoholic liquors, sugar, iron and steel, and dynamite are the most important articles of import into Bolivia. The cotton goods imported are largely of the cheaper kinds and come mostly from Germany, England, the United States, and Peru. The two adjoining countries, Chile and Peru, supply a considerable proportion of the foodstuffs imported into Bolivia. The dynamite used in the mineral industry comes almost exclusively from Germany.

[a] Conversions of the boliviano made at the rate of 39.2 cents, as furnished by the Director of the Mint.

The general classification of the exports, as given in the official reports of Bolivia, is reproduced in Table 15. For the latest two years very incomplete data have been gathered from the British consular reports. Mineral products are seen to constitute the largest part of the exports, and agricultural products the bulk of the remainder. In 1900 mineral products equaled 67 per cent of the total value of the exports, and in 1905 76 per cent; agricultural products constituted in the same years 32 per cent and 20 per cent, respectively, leaving for all other articles 1 per cent in 1900 and 4 per cent in 1905.

[b] Included in "All other."

As appears from Table 16, giving the exports for the same years in a more detailed classification, tin, silver and copper ore, and bismuth constitute the main mineral articles, while the bulk of the so-called agricultural products consists of india rubber (98 per cent of the agricultural exports in 1905), which is a product of the forests.

[a] Figures for 1904 and 1905 compiled from British Diplomatic and Consular Reports, No. 3758. Conversions of the boliviano made at the following rates, as furnished by the Director of the Mint: 1900, 44.8 cents; 1901, 43.2 cents; 1902, 38.2 cents; 1903, 39.2 cents; 1904, 41.9 cents; 1905, 44.1 cents.
[b] Not separately stated.

BRAZIL.

[Area, 3,218,130 square miles; population in 1890, 14,333,915.]

The total commerce of Brazil in 1906 was $419,801,000, of which imports equaled $161,587,000 and exports $258,214,000. Of the imports 11.4 per cent was drawn from the United States, and of the exports 35.1 per cent was sent to the United States. The official figures of the United States with reference to its trade with Brazil show that the imports from that country decreased from $59,318,756 in 1890 to $58,073,457 in 1900, and increased to $97,881,158 in 1907, and the exports thereto decreased from $11,972,214 in 1890 to $11,578,119 in 1900 and $10,985,096 in 1905, but rose to $18,697,547 in 1907, these being fiscal-year figures in all cases.

Brazil is the largest country in South America; its total area, 3,218,130 square miles, exceeds by nearly 250,000 miles that of the United States excluding Alaska. It lies almost wholly within the Tropics. Its greatest length from north to south is about 2,660 miles and from east to west about 2,700 miles.

The population is variouly estimated to be from 16 to 20 million people, of which about 2,700,000 are foreigners, including over 1 million Italians, three-quarters of a million Portuguese, and about a quarter of a million Germans. The latest satisfactory census was that of 1890, which showed 14,333,915 people, of which 6,302,000 were whites, 4,638,000 mestizos or half castes, 2,097,000 negroes, and 1,296,000 Indians.

The country may be divided, roughly speaking, into three large regions—northern Brazil, central Brazil, and southern Brazil.

Northern Brazil, the first section, comprises the region along the Amazon and its tributaries, including the States of Amazonas, Pará, Maranhao, Piauhy, and part of the States of Matto Grosso and Goyaz. It consists mostly of low lands covered with dense forests, has a tropical climate marked by excessive heat and rainfall, and is but sparsely populated, having not much over 2 million people upon an area of 2,290,000 square miles, or less than 1 person to the square mile. Owing to these conditions there is not much industrial activity, work being largely confined to the utilization of the immense forests, especially the extraction of rubber. Agriculture is developed but slightly, as is the raising of stock, which is carried on mainly to produce hides. Northern Brazil produces about 96 per cent of the rubber exported from the country and 99 per cent of the Brazil nuts, but only 20 per cent of the cocoa, 10 per cent of the cotton, 16 per cent of the dry hides, and 7 per cent of the salt hides which go to make up the export trade of Brazil.

Central Brazil, the second section, is smaller in area, but much more populous and more important from an industrial point of view. It has, according to the census of 1890, a population of about 5½ millions, and an area of 342,000 square miles, making an average of about 16 persons per square mile. It includes the following States: Ceará, Rio Grande do Norte, Parahyba, Pernambuco, Alagôas, Sergipe, and Bahia, all bordering on the Atlantic. Although it is within the Tropics, the average temperature is not so high as in northern Brazil, owing to the high plateau and the mountains which cross a great part of this territory. For the same reason there is less moisture in the air and in the ground, making the latter more readily available for cultivation. Agriculture, therefore, is thriving to a greater extent than in the north, yielding some of the most valuable products of Brazil. This section furnishes 96 per cent of the tobacco exports, 97 per cent of the goat and sheep skins, 84 per cent of the cotton, 77 per cent of the cocoa, practically all the sugar, and 70 per cent of the diamonds exported from Brazil.

The third or southern section is the most important part of the country, having the largest population, nearly 9 million people according to the census of 1890, distributed over an area of 584,000 square miles, and comprising the States of Espirito Santo, Rio de Janeiro, Minas Geraes, Sao Paulo, Paraná, Santa Catharina, Rio Grande do Sul, and the Federal capital. The great plateau which traverses it from the north to the south parallel to the coast diminishes in height as it approaches the south, finally disappearing when it reaches the State of Rio Grande do Sul. This elevation makes the climate of the northern States of this section temperate in spite

of their location within the Tropics, while the southern States have a temperate climate owing to their location outside of the Tropics. The temperate climate and fertile soil, well drained by numerous rivers, favor abundant crops in this section, which furnishes practically all of the coffee crop of Brazil, amounting to considerably more than one-half of the world's supply. In addition to the cultivation of coffee and yerba maté, there is also considerable stock breeding, both for slaughter and for the hides. Mining is also carried on to a considerable extent, this section furnishing practically all the gold and manganese exported from Brazil.

INDUSTRIAL DEVELOPMENT.

Brazil is believed to be the richest country in minerals in the world. It is estimated that not less than 600 million dollars' worth of gold had been taken out of Brazil previous to 1820. At present the gold mining industry is insignificant, and is only now beginning to be developed, mostly by British companies. In 1900 about 2½ million dollars' worth of gold was exported. The country is also rich in diamonds, and has large deposits of iron, lead, copper, zinc, coal, manganese, and quicksilver. It is estimated that since the discovery of diamonds in 1723 fully 100 million dollars' worth of them have been exported from Brazil. In 1905 the total exports of minerals were valued at nearly 5 million dollars.

MANUFACTURING.

Manufacturing industries are in a backward state owing to scarcity of labor and capital. In recent times some industries have begun to thrive, mostly those for which there is abundant raw material in the country. The most important of these is the textile industry, especially the spinning and weaving of cotton, which is carried on principally in the States of Rio de Janeiro, Minas Geraes, and Sao Paulo. Woolen mills are located in the same region, but are not so important. The development of the textile industry has resulted in a considerable reduction of the import trade in cotton goods, especially the cheaper varieties. The next important industry is that of sugar refining. Another industry to which the Brazilian manufacturers are turning their attention is the manufacture of leather goods in all branches, from the working of hides to the final leather products. With the growth of the mining industry, smelting works, foundries, and various metal products are increasing. With the increasing immigration of skilled Europeans and the growing investments of European capital there is an increasing number of industrial establishments which manufacture products such as paper, glass, wines, beer, cotton-seed oil, matches, sulphuric acid, soap, candles, and other products required for consumption in the country.

COMMERCE.

Owing to the differences in climate and in the industrial resources of the various parts of the vast country, their respective wants differ, resulting in a considerable differentiation of the import trade. The States in the northern section (which is the nearest to the United States and the only part of Brazil which can be reached in less time from the United States than from Europe) take more freely of our manufactured products than do the States lying at the south, and offer an attractive field for American exports of flour, cheap cotton goods, hardware, provisions, etc. The southern sections are less favorable to the export trade of the United States, being no nearer to us than they are to the principal European markets. Owing to the growth of domestic industries they offer less opportunity for textiles, but on the other hand are developing a market for all kinds of iron and steel products, especially machinery, implements, and tools, and in all of these lines the United States has a growing trade.

The course of trade of Brazil with foreign countries is indicated in the two tables (17 and 20) which follow for the years 1901 to 1906. In these tables the countries are arranged in the order of decreasing magnitude of their trade in 1906. The United Kingdom is found to have undisputed possession of the first place among the countries supplying the Brazilian markets. Germany, though holding the second place, did not send in 1906 much more than one-half the quantity which came from the United Kingdom, but the imports from Germany are evidently growing much more rapidly, since only five years ago Germany contributed less than one-third as much as the United Kingdom. Within these five years the imports from the United Kingdom have increased about 50 per cent and those from Germany about 150 per cent. The United States and Argentina are contending for the third place, the imports from Argentina exceeding those from the United States in 1905, while in the other four years beginning with 1902 their relative positions were reversed. The fifth and sixth places belong to France and Portugal, respectively. In general it may be said that Brazil draws its imports from a wider range of countries than many other Latin-American Republics, since the six countries mentioned contribute only 80 per cent of the imports, and considerable quantities are imported from other European, American, and Asiatic countries.

[d] Imports from all British possessions.

IMPORTS INTO BRAZIL.

The nature of the imports into Brazil for the five years 1901 to 1905 is shown at some length in Table 18. Food products and beverages seem to constitute the most important and rapidly growing share of this import trade. Thus within this short period the amount of wheat imported has almost doubled and its value increased from $3,787,000 in 1901 to $6,811,000 in 1905, while the imports of flour have remained stationary. They amounted in 1905 to 1,580,000 barrels, worth $7,969,000. The rapid growth in the imports of wheat without a corresponding growth in the imports of flour indicates the rapid development of the milling industry in Brazil, due to the high protection accorded to the domestic product. Of other cereals imported, the most important is rice, though the imports of this article have declined from 223 million pounds, worth $4,444,000 in 1902, to 129 million pounds, worth $2,846,000, in 1905. The imports of meat products are very large, exceeding 9 million dollars in 1905. These consist mainly of the very cheap article known as jerked beef, which amounted to 115 million pounds, worth $8,325,000. Finally, the imports of wines grew very rapidly from $5,311,000 in 1901 to $6,755,000 in 1902, $7,430,000 in 1903, $7,982,000 in 1904, and $8,678,000 in 1905, having increased almost 64 per cent within four years. The imports of codfish also increased within the same period from $2,865,000 to $3,847,000.

Another very important class of imports is represented by textiles. The imports of cotton and cotton manufactures alone increased from 9 million dollars in 1901 to 19 million dollars in 1905, consisting of large quantities of bleached, printed, and dyed cloths, and wearing apparel, while the imports of unbleached cloths were very small.

The figures quoted indicate a very rapidly growing market for cotton goods in Brazil. On the other hand, the imports of cotton yarn and thread actually decreased from 9,200,000 pounds in 1903 to 6,200,000 pounds in 1904 and 4,800,000 pounds in 1905, being in the latter year very little greater than they had been in 1901, so that the competition of the domestic product with the imported goods does not seem to be very strong. The imports of woolen goods are not so great, but show an equally rapid growth, the imports of cloths alone representing in 1901 a value of $1,286,000 and in 1905 $2,333,000.

An entirely different aspect of the economic life of Brazil is indicated by the data of imports of raw materials, mainly coal, mineral oil, and iron. While the value of the coal imported in 1905 was a little less than in 1901, $6,353,000 as against $6,414,000, the actual quantity of coal imported increased from 793,000 tons to

TABLE 18.—IMPORTS (INCLUDING BULLION AND SPECIE) INTO BRAZIL, 1901–1905, BY ARTICLES—Continued.

ARTICLES.	1901	1902	1903	1904	1905
Hay ... 1,000 dolls	387	394	479	439	537
India rubber, and manufactures of: Manufactures of ... 1,000 dolls	391	497	574	559	699
Iron and steel, and manufactures of:					
Iron in bars, rods, and sheets ... met. tons	7,658	13,714	15,643	17,496	18,044
Iron in bars, rods, and sheets ... 1,000 dolls	388	637	609	756	788
Steel in bars, rods, and sheets ... met. tons	1,232	1,943	2,206	2,758	3,262
Steel in bars, rods, and sheets ... 1,000 dolls	107	149	215	243	330
Wire of iron and steel ... 1,000 dolls	516	839	837	940	1,075
Rails ... 1,000 dolls	1,032	1,428	1,483	1,698	2,650
Tinplates, and manufactures of ... 1,000 dolls	292	649	602	692	785
Cutlery ... 1,000 dolls	279	415	499	629	674
All other, and manufactures of ... 1,000 dolls	1,954	3,534	3,851	4,411	5,990
Machinery, parts of, including tools ... 1,000 dolls	5,197	5,267	5,986	6,792	8,889
Jewelry ... 1,000 dolls	255	286	241	345	455
Lead, and manufactures of: Pig, ingot, and sheet ... 1,000 dolls	117	185	138	152	236
Leather, and manufactures of:					
Leather ... 1,000 lbs	1,132	1,753	1,290	1,454	1,612
Leather ... 1,000 dolls	[c] 1,005	1,564	1,387	1,600	2,048
Boots and shoes ... 1,000 dolls		276	223	194	195
All other, and manufactures of ... 1,000 dolls	118	310	313	335	401
Malt ... 1,000 dolls	395	409	446	437	483
Naval stores ... 1,000 dolls	259	311	402	493	623
Oils:					
Mineral—Kerosene ... 1,000 dolls	2,021	2,411	2,706	2,927	3,023
Other lubricating oil ... 1,000 dolls	261	402	402	508	494
Olive oil ... 1,000 dolls	541	698	644	658	900
Paper, and manufactures of:					
Printing paper ... 1,000 dolls	558	660	691	722	892
Writing paper ... 1,000 dolls	.....	297	318	308	383
All other, and manufactures of ... 1,000 dolls	1,002	1,022	1,269	1,196	1,463
Perfumery ... 1,000 dolls	326	501	564	675	725
Provisions:					
Meats—					
Beef, jerked ... 1,000 lbs	134,732	106,994	105,141	113,462	114,584
Beef, jerked ... 1,000 dolls	8,330	6,088	5,610	6,163	8,325
Bacon ... 1,000 dolls	187	248	221	161	188
Lard ... 1,000 lbs	11,516	9,274	7,122	2,892	1,588
Lard ... 1,000 dolls	1,215	1,234	867	320	181
All other meats, including canned ... 1,000 dolls	265	304	307	332	433
Dairy products:					
Butter ... 1,000 lbs	6,058	6,271	5,496	5,642	6,568
Butter ... 1,000 dolls	1,564	1,657	1,443	1,471	1,781
Cheese ... 1,000 dolls	478	584	533	562	591
Milk canned ... 1,000 dolls	264	272	355	389	467
Rice ... 1,000 lbs	197,037	222,631	162,234	134,042	129,413

Gold and silver: Specie and foreign bank notes ... 1,000 dolls	5,980	4,786	4,617	3,907	14,121
Total imports ... 1,000 dolls	101,442	117,769	122,106	129,683	158,896

[a] Motors and locomobiles.
[b] Includes nitrate of soda.
[c] Includes hides and skins not specified, and boots and shoes.
[d] Wines only.

1,055,000 tons. The imports of iron show an increase even more remarkable. In 1901 they amounted to $9,765,000 and in 1905 to $21,181,000; that is, in four years the increase was over 117 per cent. The imports of machinery increased from $5,197,000 to $8,889,000; of rails, from a little over a million to $2,650,000; steel wire, from half a million to over a million dollars; and various iron manufactures from less than 2 million dollars to nearly 6 million dollars. This rapid growth in the coal, iron, and steel imports must be looked upon as a fair measure of the beginning of the industrial development of this large South American Republic.

As no official statistics of foreign trade were compiled in Brazil before 1901, figures of its imports and exports previous to that year had to be compiled from the returns of countries exporting to and importing from Brazil, and these are given on page 115, in the statistical appendix. These data indicate that the increase of imports into Brazil within the last five-year period, shown in Tables 18 and 19, represents a rapid recovery from the marked depression of imports during the end of the last and the beginning of the current century.

The exports from the United States to Brazil in 1906, though 3.5 million dollars greater than during the preceding year, were smaller than those in 1895, when the decline of trade began. The exports from the United Kingdom to Brazil in 1891 were nearly 42 million dollars, and then gradually declined to 34 million dollars in 1896, and 27 million dollars in 1899, reaching the bottom figure of less than 22 million dollars in 1901, after which a rapid recovery brought the figure back to 39 million dollars in 1906.

During the same period the exports from France to Brazil fell still lower, from 23.4 million dollars in 1891 to 8 million dollars in 1902 and 12 million dollars in 1905.

A computation of average annual exports to Brazil from the ten countries with which Brazil mainly trades, and imports into those countries from Brazil, is made in Table 19. An addition of the data for these ten countries combined gives substantially the total foreign trade of Brazil. Notwithstanding the increased trade of the most recent years, the average annual exports from the ten countries to Brazil (which represent the bulk of the imports into Brazil) for the period 1901 to 1905 were about 5 per cent smaller than during 1896 to 1900, while exports during which period were 22 per cent smaller than during 1891 to 1895. With the exception of one or two, all countries suffered in this decline, but Argentina, the United Kingdom, Germany, and France suffered most heavily in 1896 to 1900, their exports declining from 20 to 30 per cent, while for the United States the decline was only 8.6 per cent. In the last period further declines took place in the exports from France, the United Kingdom, United States, Portugal, and Uruguay. On the other hand, the imports into these ten countries from Brazil, representing substantially the exports from Brazil, though also declining somewhat during the period 1896 to 1900, increased rapidly during the last five years, even over the volume of like imports for 1891–1895.

TABLE 19.—ANNUAL AVERAGE COMMERCE OF BRAZIL DURING FIVE-YEAR PERIODS, 1891–1905, BY COUNTRIES.

COUNTRIES.	1891–1895	1896–1900	1901–1905	Increase (+) or decrease (−)	
				1896 to 1900	1901 to 1905
Exports to Brazil from—	*Dollars.*	*Dollars.*	*Dollars.*	*Per ct.*	*Per ct.*

a Four-year averages (1901–1904). b Three-year averages (1901–1903).

EXPORTS FROM THE UNITED STATES TO BRAZIL.

The export trade of the United States with Brazil has not suffered in total value as much as the exports of some other countries; the lowest figures were $10,391,000 in 1902, or 68.5 per cent of the highest figures ($15,165,000, in 1895), while the exports from the United Kingdom and from Germany to Brazil fell off more than one-half, and those from France were in 1902 little more than one-third of the exports in 1894. But while the total volume of trade remained more or less uniform, the character of the exports changed considerably. In 1892 the following seven articles constituted more than three-fourths of the total exports from the United States to Brazil: Wheat flour, $4,972,539; mineral oil, refined, $1,281,791; locomotives, $976,959; lumber, $567,834; bacon, $576,195; steam railway cars, $941,061; lard, $549,921. The exports of five of these seven articles have fallen off considerably during the last ten or fifteen years. The exports of wheat flour, declining constantly, amounted in the fiscal year 1906 to only $1,211,881, or less than one-fourth of the exports of fourteen years ago, and showed but a slight increase in 1907. The exports of bacon reached the highest point in 1895, amounting to $1,998,394, and fell off rapidly to only $77,021 in 1905, but they increased somewhat in later years, namely, to $203,140 in 1907. In other words, the exports of provisions and foodstuff products from this country to Brazil have fallen off considerably, the only notable exception being lard.

Another class of exports showing a still more rapid decline is railway materials. The exports of steam railway cars declined from the high-water mark of $1,279,578 in 1894 to less than $10,000 in 1905; the exports of locomotives from $1,648,758 in 1895 to less than $50,000 in 1901, since when a gradual increase brought the exports up to $581,411 in 1907.

The exports of cotton manufactures and of lumber also declined in the middle of this period, but greatly recovered in the more recent years. On the other hand, the exports of refined mineral oils rapidly increased from $944,427 in 1894 to $2,960,438 in 1907, and other articles showing increased exports are bituminous coal, scientific instruments, electrical apparatus, and various iron and steel products, such as wire, builders' hardware, machinery, etc. Exclusive of locomotives, the exports of iron and steel products to Brazil in 1892 amounted to $1,202,000, in 1900 to $1,775,000, and in 1906 to $3,525,000. These changes in the exports from the United States to Brazil seem to indicate a rapid development in Brazil of a market for fuel, raw materials, and machinery, due to the gradual industrialization of that country.

TRADE OF THE UNITED KINGDOM WITH BRAZIL.

The same tendency is marked in the development of the trade of the United Kingdom with Brazil. The exports of the United Kingdom to this South American country consist mainly of metals (primarily manufactures of iron and steel), fuel, and textiles. Of the total exports of domestic products of $38,501,000 in 1892, cotton goods amounted to $16,336,000, or 42.5 per cent, coal to $2,738,000, iron and steel and manufactures of, exclusive of machinery, to $4,708,000, machinery to $3,714,000, woolens to $2,001,000, and jute and linen manufactures to $1,413,000; together these few items represented a value of $30,910,000, or 80 per cent of the total trade. These are still the main articles exported from the United Kingdom

to Brazil, yet considerable changes have taken place. When the total exports reached the bottom level, in 1901, the exports of textiles suffered most, cotton goods declining to $5,224,000, or less than one-third, and woolen goods to $695,000, also less than one-third. Within the last five-year period these exports have increased, but have not reached the old level, cotton goods amounting to $10,797,000 and woolen goods to $1,181,000. The exports of jute piece goods decreased from $742,000 in 1892 to $317,000 in 1897, $93,000 in 1902, and only $29,000 in 1906, while exports of jute yarn for use in the textile factories of Brazil increased from 5 million pounds in 1892 to 31 million pounds in 1906, or, in value, from $273,000 to $2,533,000. Coal exports increased from 826,313 tons in 1892, worth $2,738,000, to 1,261,644 tons, worth $4,390,000 in 1906. Other articles showing considerable increases are machinery, implements and tools, copper, ships, and boats.

EXPORTS OF BRAZIL.

While the exports of Brazil, consisting as they do of large quantities of a very limited number of articles, are distributed over a wide range of countries, four countries, the largest consumers of coffee and rubber, receive by far the greatest share of Brazilian products. The United States, being the largest consumer of coffee, heads the list and claims a very large proportion of the entire exports, 43 per cent in 1901 and 35 per cent in 1906. The exports to Germany constituted in 1906 17.6 per cent, to the United Kingdom 16.1 per cent, and to France 12.2 per cent. The exports to Argentina, Netherlands, and Austria-Hungary equaled about 9 million dollars for each country, and altogether the seven countries named absorbed over 92 per cent of the Brazilian exports. (See Table 20.)

a Included in Asia Minor.
b Stated in the reports as northern Africa.
c Stated as French possessions.

Coffee, as is well known, constitutes the principal export of Brazil, amounting to about one-half of the total in some years and even considerably more than one-half in others, as in 1901 and 1902. (See Table 22.) Other important exports are rubber, tobacco, hides and skins, cocoa, yerba maté, sugar, gold, and diamonds. In 1905 the exports of coffee amounted to 104 million dollars, or 48 per cent of the total; rubber to 70 million dollars, or 32 per cent; hides and skins to 9 million dollars, or 4 per cent; yerba maté to 6 million dollars, or a little less than 3 per cent, and cocoa and raw cotton to over 5 million dollars, or 2½ per cent, each. These six articles constituted 92 per cent of the total exports in 1905. Of the other articles of secondary importance may be mentioned bran, Brazil nuts, manganese ore, raw sugar, and leaf tobacco. Since the official figures of the Brazilian Government do not go back of 1901, thorough comparisons are difficult, for considerable fluctuations have occurred in the exports of individual articles, but no great changes as a whole. The exports of coffee seem to have declined in quantity from nearly 15 million bags in 1901 to 11 million bags in 1905, and those of raw sugar fell off considerably more—from 370 million pounds in 1901 to 75 million pounds in 1905. The exports of leaf tobacco have also shown a marked tendency to decline, while the exports of cotton in 1905 were greater than in 1904 but much smaller than in 1902 and 1903; on the whole the excess of exports in 1905 over those of 1904 seems to have been due to a rise in prices (mainly of india rubber) rather than to an actual increase of exports.

For a few articles a much more complete record of exports from Brazil exists. The following table, compiled from the work of Dr. Vieira Soulo, professor of political economy at the Polytechnic School at Rio de Janeiro, on international commerce, navigation, and the finances of Brazil, shows the development of the exports of coffee, cotton, sugar, tobacco, india rubber, and hides and skins, the main products of Brazil, by a comparison of the average annual exports for three five-year periods—1840–1844, 1870–1874, and 1901–1905:

TABLE 21.—AVERAGE ANNUAL EXPORTS FROM BRAZIL, 1840–1844, 1870–1874, AND 1901–1905.

ARTICLES.	1840-1844	1870-1874	1901-1905
	Pounds.	*Pounds.*	*Pounds.*
Coffee	183,829,000	413,966,000	1,632,012,000
Cotton	22,852,000	118,457,000	48,273,000
Hides and skins	28,839,000	70,127,000	60,472,000
India rubber	422,000	13,382,000	69,598,000
Sugar	181,430,000	343,089,000	172,585,000
Tobacco	9,154,000	33,532,000	64,561,000

As shown by this table the exports of coffee have developed very rapidly, increasing fourfold within the last three decades, while the exports of india rubber, though much smaller, have increased fivefold, and those of tobacco have doubled. On the other hand, the exports of cotton have fallen off, due to the utilization of this article by the domestic spinning and weaving industry, and the exports of sugar have also decreased, due in part to the increased domestic consumption.

EXCHANGE.

One of the disturbing factors in the foreign trade of Brazil is the unstable currency, resulting from the flood of irredeemable paper money issued in the past. The value of the gold milreis, which is the standard of money in Brazil, is 54.6 cents; the paper milreis has fluctuated all the way from par in 1889 to less than 12 cents in 1899. Since then the value of the paper milreis has been gradually improving and was as high as 31.9 cents last year. In 1907 the average value was 30.6 cents. These fluctuations of the paper money, which is practically the sole medium of circulation, bring in an unhealthy element of speculation in the import and export transactions of the importers and native producers. This is intensified by the fact that the retail prices remain about the same, as they are mostly quoted in terms of paper money. It also affects the customs duties paid by importers of foreign merchandise, since the greater part of the duties is payable in paper money.

TABLE 22.—EXPORTS (SPECIAL COMMERCE, INCLUDING BULLION AND SPECIE) FROM BRAZIL, 1901–1905, BY ARTICLES.

TRANSPORTATION.

Water transportation.—The shipping facilities of Brazil are very good, but are better calculated to accommodate her trade with European countries than with the United States. Most of the oceanic lines are in the hands of the English, though German companies have been constantly increasing lines of direct steamship communication with Brazil. A French company has also one of the largest lines plying regularly between ports of France and Brazil. According to Mr. Hutchinson's report,[a] the European service "is carried on by large and fast steamers, thoroughly equipped in every way for freight, passenger, and mail business, running on accurate schedule time, and giving regular communication between Brazil and Europe, in each direction, at least six times per month; while the steamers from the United States are small and slow, have only inferior accommodation for passengers, and, with the exception of a single sailing each month (the Lamport & Holt Line), are more or less irregular as to time of departure and arrival."

In freight rates there is very little difference as between goods carried from the United States or European countries. On a large number of products a reduction from the regular freight rates is allowed if shipped in sufficiently large quantities (from 1 to 400 tons) by one steamer on one bill of lading. Since Europe ships greater quantities of these products than the United States and since the custom of combining many small shipments into one through the agency of an export commission house is much more in vogue in Europe than in the United States, the Europeans get to that extent somewhat more favorable rates than the United States. The difference, however, in most cases, amounts to about 60 cents per ton, which is not sufficiently large to be of material consequence in deflecting trade from one channel to another. The chief advantage of the European countries as regards shipping facilities lies, in the opinion of Mr. Hutchinson, in the frequency and regularity of the sailings of European lines. The following table was compiled by Mr. Hutchinson from consular invoices and other official sources to get a comparison of the cost of carrying goods from the United States and our chief European competitors:

TABLE 23.—COST OF GETTING SPECIFIED GOODS FROM THE PORT OF SHIPMENT TO THE CUSTOM-HOUSE IN BRAZIL, EXPRESSED IN PERCENTAGE OF THEIR VALUE.

Railways.—The railways of Brazil aggregate about 5,500 miles, but do not form a complete or unified system of communication between the different parts of that vast country. The high mountains rising abruptly within a short distance from the coast make communication with the interior exceedingly difficult, and the construction of railroads has been greatly hampered and delayed by these physical obstacles, as well as by the sparsity of population, which does not promise sufficient returns for the construction of costly roadbeds. As a result, the railroads of Brazil consist of many short and separate lines running from the various ports a comparatively short distance into the interior.

[a] Report on Trade Conditions in Brazil, by Lincoln Hutchinson. Washington, 1906.

Of late years efforts have been made to connect the various lines so as to bring them into a unified system from north to south. Roughly, the railroads of the country may be divided into three sections—north, middle, and south—although, to be more exact, they may be grouped under five heads, according to the principal centers from which they radiate. Beginning at the extreme north and taking them in their order southward the following railway systems may be enumerated: (1) Radiating from Pernambuco; (2) Bahia; (3) central Brazil; (4) Rio Grande do Sul; (5) various isolated lines.

As regards ownership and management, the railways of Brazil may be divided into three groups: Those owned and operated by the Government, about 1,000 miles; those owned by the Government and leased to private companies, about 1,400 miles, and those owned and operated by private companies, about 3,200 miles.

TARIFF.

The Brazilian tariff is highly protective, high duties being levied on every product which, in the opinion of the Brazilian people, can be produced at home. Many commodities which can not be produced in Brazil and which are important in the consumption of the people are also taxed by high duties in order to provide a revenue for the Government. Among these are wheat and petroleum. Among the few products admitted free of duty are dry and stuffed animals for museums, manures, eggs, trees, plants, and seeds imported for gardens, coal, broken glass, gold, silver, platinum in bar or dust, and agricultural implements. By special arrangements, however, machinery, implements, and other articles necessary for the equipment of plants in newly established industries are being admitted free at the discretion of the Executive, the Government being anxious to attract foreign capitalists and build up industries in the country. The tariff is revised once a year along with the budget. The duties are mostly specific. Although the tariff is very long, containing more than 1,000 schedules, which enumerate between three and four thousand articles, provision is made for unenumerated articles, which are to be rated as similar articles mentioned in the tariff, or at 50 per cent ad valorem if no analogous article can be found in the tariff.

In addition to the tariff rates proper there are numerous other taxes, such as port dues, custom-house fees, tonnage charges, etc., so that even articles nominally admitted free of duty pay something like 15 per cent ad valorem in fees of all kinds.

Previously duties were paid in paper money. Later provision was made for a small percentage of the duties to be paid in gold, which was gradually increased to 25 per cent. By the law which went into effect January 1, 1906, 35 per cent of the duties is payable in gold and the balance in paper, and on a considerable number of articles 50 per cent is payable in gold. The recent rise in the value of the paper milreis has resulted automatically in a further increase of the duty to the extent of about 25 per cent. By a recent order of the Brazilian Government a reduction of 20 per cent from the duties is granted to the following products coming from the United States: Manufactures of rubber, dyes, varnishes, clocks, condensed milk, windmills, air motors, electric machinery, firearms, carriages and buggies, drugs and druggists' supplies, glassware (the fair grades), hardware, launches, yachts, dredges, lubricating oils, medicinal preparations, paper and manufactures thereof, pianos, railroad material, scales, surgical instruments and appliances, toilet soap, typewriters, preserved fruits, Portland cement, manufactures of iron and steel, apples, men's ready-made clothes, suitings, etc., and cutlery.

CANADA.

[Area, 3,745,574 square miles; population in 1901, 5,371,315; estimated population in 1905, 5,683,396.]

The total commerce of Canada in the fiscal year ended June 30, 1906, was $550,873,000, of which $294,286,000 were general imports and $256,587,000 total exports. Omitting gold and silver, the trade amounted to $512,643,000, of which $283,282,000 represented imports for consumption and $229,361,000 exports both domestic and foreign. Of the imports of merchandise for consumption 60.6 per cent came from the United States, and of the exports 38.1 per cent was sent to the United States. The official figures of the United States with reference to its trade with Canada show that the imports from that country have grown from $39,042,977 in 1890 and $39,369,074 in 1900 to $73,334,615 in 1907, and the exports thereto from $40,282,108 in 1890 to $95,319,970 in 1900 and $183,206,067 in 1907, these being fiscal-year figures in all cases.

The Dominion of Canada comprises the northern half of North America with the exception of Alaska, Greenland, Labrador, and Newfoundland, which colony still continues its separate existence, not having joined the Canadian Confederation.

The census of Canada April 4, 1901, shows the following area and population:

TABLE 24.—AREA AND POPULATION OF THE DOMINION OF CANADA, 1901.

PROVINCES AND TERRITORIES.	Area.	Population.
	Sq. miles.	
British Columbia	312,630	178,657

Ontario	260,862	2,182,947
Prince Edward Island	2,184	103,259
Quebec	351,873	1,648,898
The Territories	2,694,880	211,649
Total	3,745,574	5,371,315

FOREIGN COMMERCE OF CANADA.

The growth of the foreign commerce of the Dominion since the confederation in 1868 is illustrated by the following table, which shows the total values of imports for consumption and exports for 1868, 1870, and every subsequent fifth year to 1900, and the annual commerce from 1900 to 1906, as stated in the Tables of the Trade and Navigation of the Dominion of Canada, published by the Canadian customs department:

TABLE 25.—FOREIGN COMMERCE (INCLUDING GOLD AND SILVER) OF THE DOMINION OF CANADA IN SPECIFIED YEARS, 1868-1906.

YEARS ENDED JUNE 30—	Imports for consumption.	Total exports.	Total.

In the case of imports the figures showing imports for consumption were taken, the only figures in terms of which imports by countries are stated for the entire period. The difference between the aggregate general imports and imports for consumption for the entire period 1868 to 1903 is about 5 per cent.

The value of the total foreign commerce of the Dominion appears to have increased about 322 per cent; the value of imports has more than quadrupled, while that of exports has increased nearly fivefold. Of the aggregate trade about 50 per cent is with the United States and about 37 per cent with the United Kingdom, the relative proportions since 1868 being as follows:

[b] Includes imports for consumption and total exports.

DISTRIBUTION OF CANADA'S TRADE.

The distribution of the imports and exports of Canada, by countries as well as by articles, for the last sixteen years is shown in some detail on pages 73, 74, and 86 to 89. While the list of countries to which Canada sends its surplus products and from which greater or smaller quantities of goods are imported into Canada is a very long one, yet it is disclosed at a glance that two countries, namely, the United States and the United Kingdom, absorb most of the trade of the Dominion. In 1906 the imports from these two countries amounted to 84 per cent of the total imports and the exports to them amounted to 89 per cent of the total exports. In the case of imports the United States not only occupies the first position, but sells to Canada a great deal more than all the other countries combined—in fact, almost 60 per cent of the total—while the United Kingdom supplies about 25 per cent. The reverse is true of domestic exports, in which the respective shares of the two countries are 58 per cent for the United Kingdom and 30 per cent for the United States. The conditions of commerce between Canada and the two countries named therefore deserve more detailed treatment, which is given in subsequent pages. Of all the other countries, only France and Germany and a few British colonies claim any considerable share of the commerce of Canada, imports from France in 1906 being over 7½ million dollars and from Germany almost 7 million dollars. The imports from France seem to have grown considerably during the last decade, but the growth practically stopped about 1902, while the imports from Germany rapidly grew until 1903, since which time they have also declined, though in the distribution of the exports of Canada even these countries play a very insignificant rôle, Newfoundland being in 1906 the only country outside the mother country and the United States which took more than 3 million dollars' worth of Canadian produce.

An examination of Table 27, giving the exports by large classes of articles, demonstrates that Canada still continues to export raw materials mainly. It is true that the exports of manufactures from Canada have been rapidly growing, increasing from about 2.6 million dollars in 1870 to more than 5.7 millions in 1890, 14.2 millions in 1900, and 24.6 millions in 1906, or over 113 per cent within thirty-five years. Still, manufactures do not represent much more than 10 per cent of the total exports from Canada, and the remaining 90 per cent consists almost exclusively of raw, or, at most, slightly manufactured, products of the mine, fishery, forest, animal industry, and agriculture. The exports of agricultural products in 1906 reached the unusually large sum of 54 million dollars, but this was an extraordinary year, and the large quantity was due both to good harvests and to high prices of agricultural commodities, mainly wheat. About two-thirds of this was destined to the United Kingdom and the remainder divided nearly equally between the United States on the one hand and all other countries on the other. The exports of animals and animal products have shown a persistent and rapid increase, reaching 66.5 million dollars in 1906 as against 34.4 millions in 1895 and 17.6 millions in 1880. Almost nine-tenths of these exports of animals and animal products are sold in the British market. A more even distribution took place in the fish exports. Of the forest products exported the United States receives about one-half of the total and most of the remainder goes to the United Kingdom, but in the exports of mineral products the United States occupies a position no less prominent than does the British market in the purchase of animal products. Canada, therefore, is seen to be a very important source

of supply of food products and various raw materials, of which the mother country makes very great use. As is seen from the detailed tables, the main articles of export consist of wheat and wheat flour, cattle, bacon and other meats, large quantities of cheese and butter, dried cod, canned lobsters, salmon and other fish, coal, copper ore, gold-bearing quartz, etc. Since many of these articles play an important part in the exports from the United States, Canada might be considered a serious competitor of the United States in the field of international commerce, but a study of imports into Canada will show that simultaneously with this development of the agricultural and other natural possibilities of Canada a very important market for manufactured articles of all kinds is rapidly developing, in which market American goods have acquired a strong position, for in fifteen years imports into Canada from the United States have increased from 50 to almost 170 million dollars. A vast variety of manufactured and other articles is imported, as may be seen from the long list on pages 86 et seq. To enumerate only the most important ones, Canada is buying very large quantities of anthracite and bituminous coal, millions of pounds of raw cotton, and also many millions of dollars' worth of cotton cloths; iron and iron manufactures, mainly machinery; silk, wool, and other textiles; more than 10 million dollars' worth of sugar, and hundreds of other articles in smaller quantities. As is shown in Table 28, the greatest share of the imports into Canada consists of manufactured articles, which constituted 65.3 per cent of the total imports for consumption in 1901 and 65.8 per cent in 1905.

PROGRESS OF CANADIAN TRADE WITH THE UNITED STATES AND THE UNITED KINGDOM.

The progress of Canadian trade with the United States and the United Kingdom reveals peculiarities deserving of notice. A comparison of the Canadian figures of imports for consumption for the years beginning with 1873 with those of more recent years shows that the relative importance of the mother country as a purveyor of goods to the Dominion has considerably decreased. The share of the United Kingdom in the total import trade of the Dominion was in 1873 nearly 54 per cent; in 1885 it was only a little over 40 per cent; in 1895 this share declined to less than 30 per cent, and in 1897 to 26.1 per cent.

In 1897 products from the United Kingdom entering the Dominion of Canada were admitted, by special arrangement, at a reduction of 12½ per cent below the tariff on imports from other countries. On August 1, 1898, the reduction in favor of British products was increased to 25 per cent, and on July 1, 1900, to 33⅓ per cent. This preferential tariff legislation since 1897 in favor of the United Kingdom was followed by a considerable increase of imports from that country, the import figures for 1906 being more than double those for 1897, viz, $69,194,000, against $29,412,000. During the same period the total imports, however, increased even at a greater rate, so that in 1906 the relative share of the United Kingdom in the total import trade of the Dominion had decreased to 23.8 per cent. The export trade of the Dominion with the United Kingdom shows a different development. There was an absolute growth of exports to the mother country from $38,740,000 in 1873 to $131,202,000 in 1903, or 238.6 per cent; in 1904 the exports declined to 117½ millions, and in 1905 a further decline to less than 102 million dollars took place; but in 1906 the exports to the mother country reached their high-water mark of over 133 million dollars. While in 1873 43.6 per cent of the total exports were to the mother country, this share was 52.1 per cent in 1880, 56.1 per cent in 1900, and 51.9 per cent in 1906.

The trade with the United States for the same period shows a larger growth, though the gains were smaller on the export side. Thus the increase of the imports into Canada from the United States between 1873 and 1906, from $47,736,000 to $175,862,000, amounts to nearly 268 per cent, while the exports from the Dominion to the United States for the same years shows an increase from $42,073,000 to $97,807,000, or 132 per cent—i. e., less than one-half the rate of increase of imports into Canada. Of the total imports for consumption the share from the United States constituted 37.4 per cent in 1873, 40.9 per cent in 1880, 46.4 per cent in 1890, 60.7 per cent in 1900, and 60.6 per cent in 1906, whereas of the total exports the shares sent to the United States during the same years were 46.9 per cent, 37.9 per cent, 41.9 per cent, 35.7 per cent, and 38.1 per cent, respectively.

[a] From Tables of the Trade and Navigation of the Dominion of Canada.

ANALYSIS OF COMMERCE OF THE UNITED STATES WITH CANADA.

Among the imports into the United States from Canada foodstuffs and raw materials for use in industry constitute the principal items. Considerable quantities of bituminous coal come from Nova Scotia and British Columbia, the imports into the eastern section of the United States especially showing considerable growth during the last decade.

While the imports from Canada have increased during the decade 1896 to 1906 nearly 67 per cent, the fact that the greater part of these imports is similar in character to those articles which are produced in abundance by the contiguous parts of the United States, and, as a rule, under more favorable conditions, accounts to some extent for the fact that an increasing proportion of Canadian exports had to seek a market oversea, chiefly in the United Kingdom.

Canada not only ships to the United States, but also receives from the United States, considerable quantities of breadstuffs, animals, and other raw materials of which, according to common notion, the Dominion is supposed to produce surplus quantities. The following table illustrates this observation:

TABLE 31.—IMPORTS FROM CANADA INTO THE UNITED STATES AND EXPORTS TO CANADA FROM THE UNITED STATES OF SPECIFIED ARTICLES, YEARS ENDING JUNE 30, 1896 AND 1906, BY ARTICLES.[a]

[b] Manufactures of copper not included.

United States exports to Canada show a gain of 163 per cent during the last decade, notwithstanding the application in April, 1897, of preferential tariff rates (reduction of 12½ per cent) to imports from Great Britain and some of its colonies, and the gradual increase of the preference to 25 per cent in August, 1898, and to 33⅓ per cent since July 1, 1900. This gain is the more remarkable as nearly one-half of these exports are subject to duty, and thus at a disadvantage when meeting competing products of British origin. The following

tables show the value of imports for consumption into Canada from the United States and Great Britain, both of dutiable and duty-free goods (the latter being chiefly raw materials for use in manufactures), and the relative shares of dutiable goods imported from the two countries for the period 1896 to 1906.

TABLE 33.—IMPORTS FOR CONSUMPTION INTO CANADA FROM THE UNITED KINGDOM AND THE PER CENT WHICH DUTIABLE ARTICLES FORM OF THE TOTAL IMPORTS, 1896–1906.

YEARS ENDED JUNE 30—	Dutiable goods.	Duty-free goods.	Total.	Per cent dutiable.
	Dollars.	*Dollars.*	*Dollars.*	
1896	24,366,179	8,613,563	32,979,742	73.9
1897	20,217,422	9,194,766	29,412,188	68.7
1898	22,556,479	9,944,438	32,500,917	69.4
1899	27,521,508	9,538,615	37,060,123	74.3
1900	31,561,756	13,227,974	44,789,730	70.5
1901	31,701,654	11,316,510	43,018,164	73.7
1902	35,062,564	14,143,498	49,206,062	71.3
1903	42,210,165	16,686,736	58,896,901	71.7
1904	44,939,829	16,837,745	61,777,574	72.6
1905	45,099,527	15,243,182	60,342,709	75.0
1906	52,615,725	16,578,863	69,194,588	76.0

The imports of dutiable goods from the United States increased from 29.1 million dollars in 1896 to 89.5 million dollars in 1906, or nearly 208 per cent; i. e., at a rate even higher than that shown by the total imports from the United States, which increased from 58.6 million dollars to 175.9 million dollars, or about 200 per cent, during the same period.

The dutiable imports into the Dominion from the United Kingdom for the same period show an increase of about 116 per cent, while the total imports from that country increased almost 110 per cent. In other words, notwithstanding preferential treatment, the rate of increase in the imports of British dutiable goods into Canada was smaller than the rate of increase in the imports of American dutiable goods.

[The entire subject of the trade of Canada with the United States and the United Kingdom was treated at length in a special study by the Bureau of Statistics entitled "Trade of the United States with the Dominion of Canada" and published in the Monthly Summary of Commerce and Finance for June, 1904, which may be obtained on application to the Bureau of Statistics, Department of Commerce and Labor.]

CENTRAL AMERICAN REPUBLICS.

[Area, 198,170 square miles; population, 4,488,000.]

The total commerce of the Central American Republics during the latest years for which statistics are available amounted to $58,934,000, of which imports equaled $27,063,000 and exports $31,871,000. Of the imports $13,357,000, or 49.4 per cent, came from the United States, and of the exports $14,481,000, or 54.4 per cent, was sent to the United States. On the other hand, the reports of the foreign commerce of the United States show that the imports from Central America have grown from $8,052,444 in 1890 to $8,630,554 in 1900 and $15,085,795 in 1907; and the exports thereto from $5,296,478 in 1890 to $5,926,579 in 1900 and $26,830,136 in 1907, these being fiscal-year figures in all cases.[a]

COSTA RICA.

[Area, 18,400 square miles; population in 1903, 322,618.]

The total commerce of Costa Rica in 1906 was $16,081,000, of which $7,278,000 were imports and $8,803,000 exports. Of the imports 54.5 per cent was drawn from the United States, and of the exports 47.4 per cent was sent to the United States. The official figures of the United States with reference to its trade with Costa Rica show that the imports therefrom have grown from $1,676,711 in 1890 to $2,980,030 in 1900 and $4,965,034 in 1907, and the exports thereto from $1,126,170 in 1890 to $1,462,355 in 1900 and $2,470,986 in 1907.

COMMERCE.

The total imports and exports of Costa Rica from 1883 to 1906 are shown on page 67. In the decade 1883 to 1893 the imports were almost invariably greatly in excess of the exports, but this relation has been completely reversed since 1894, the exports of merchandise in 1904 having been $780,000 in excess of the imports. In 1903 the excess of exports was even greater, namely, $2,370,000.

In Table 34 is shown the geographic distribution of the foreign trade of Costa Rica. In both its exports and imports the United States occupies at present the most important position, contributing more than half of its imports and taking nearly half of its exports. Of the other countries from which the imports into Costa Rica are derived, the most important ones are the United Kingdom, Germany, and France, British goods constituting approximately one-fifth to one-fourth of the total imports, while Germany contributes from 10 to 15 per cent annually. In the export trade the United Kingdom has until recently represented the most important market for Costa Rican goods, taking both in 1903 and 1904, 49 per cent, while the United States claimed in these two years 42 per cent. Since 1905, however, the respective positions of these two countries have been reversed, the exports to the United States showing a much more rapid development. Together these two countries take more than 92 per cent of the total exports, the only other countries of any importance in the export trade being Germany and France. It is characteristic that the trade of Costa Rica with other Latin-American countries is insignificant, which is probably due to the similarity of their products.

TABLE 34.—IMPORTS INTO AND EXPORTS FROM COSTA RICA, 1903–1906, BY PRINCIPAL COUNTRIES.[a]

Other countries	103,530	231,592	85,141	63,579
Total	7,264,120	6,757,463	8,138,152	8,802,650

[a] Compiled from Dirección General de Estadística de la República de Costa Rica, Sección Comercial, Importaciones y Exportaciones, 1903, 1904, 1905, 1906.

The exports by main articles for the years 1895 to 1906 are shown in Table 35. The exports, especially in the last year, consist almost wholly of coffee and bananas. In earlier years lumber

[a] The imports from and exports to Panama are included in the figures for 1907.

formed an item of some importance, but has gradually dwindled from its maximum export value of $485,695 in 1896 to $46,919 in 1905, though within the last year there was again an increase to $142,465. In 1895 the banana exports were $628,009, or about one-seventh of those of coffee ($4,320,712). In 1905 banana exports were valued at $3,641,501, or nearly equal to those of coffee ($3,771,033). In 1906 the exports of bananas amounted to $4,436,317, showing an increase of almost $800,000 in one year, and exceeded those of coffee by over a million dollars. The low figure for coffee in 1904 ($3,082,972) can not be regarded as normal, being due to unusually bad crops; in 1903 the total export ($4,229,158) was very close to the former maximum; on the whole there is an evident decline. The growth in banana exports, on the other hand, is continuous.

[a] Figures for 1895 to 1898 are from the Memoria de Hacienda y Comercio for the same years; figures for 1899 to 1904 from Memoria de Fomento, 1905, diagram "Exportaciones de Costa Rica" (under Dirección General de Estadística); figures for 1905 and 1906 from Departamento Nacional de Estadística, Sección Comercial, Importaciones y Exportaciones, años de 1905 y 1906.

[b] Includes gold and silver bullion and coin; also rubber and hides and skins for the years 1895 to 1898.

Up to the end of 1902 bananas were practically all shipped to the United States. In 1903 the United Fruit Company sent 650,000 bunches to the United Kingdom, and the experiment was so successful that in 1904 the shipments were increased to 1,299,500 bunches, in 1905 to 2,237,779 bunches, and in 1906 to 2,680,832 bunches, or 30 per cent of the total quantity exported.

Nearly three-fourths of the coffee goes to the United Kingdom. The increasing exports to that country are shown by the following table:

TABLE 36.—PERCENTAGE OF EXPORTS OF COSTA RICAN COFFEE TO VARIOUS COUNTRIES, 1897–1906.

YEARS.	United Kingdom.	United States.	Germany.	Other countries.
	Per cent.	*Per cent.*	*Per cent.*	*Per cent.*

1904	85	7	6	2
1905	70	20	7	3
1906	76	9	11	4

Of the $70,500 worth of cacao exported in 1906, the United Kingdom took $22,221, the United States $25,221, and France $12,363. The United States took more than half of the mahogany, the rest going mostly to Germany. Of the cedar exports, on the other hand, three-fourths went to Germany, and about 10 per cent to France and Spanish America. France took more than one-half of the dyewood. Gold bullion and skins went exclusively and hides almost exclusively to the United States. The same was true of rubber.

The imports into Costa Rica are derived mainly from six countries: United States, United Kingdom, Germany, France, Spain, and Italy. The share which each of these countries took of the imports during the years 1900 to 1906 is shown in the following table:

TABLE 37.—PERCENTAGE OF IMPORTS INTO COSTA RICA FROM PRINCIPAL COUNTRIES, 1900–1906.

YEARS.	United States.	United Kingdom.	Germany.	France.	Spain.	Italy.	Other countries.

1906	50.19	22.48	11.58	5.16	2.75	2.40	5.44

Costa Rica being almost exclusively an agricultural country, and its exports almost wholly products of the soil, its imports naturally consist for the most part of manufactures. The principal imports for the years 1903 to 1906, inclusive, are shown by articles in Table 38. The most important article was materials for railways and street cars, amounting to $1,275,600, or over one-sixth of the total imports; of this material 85 per cent came from the United States. Next followed cotton cloths, valued at $963,400, or one-eighth of the total; of this the United Kingdom contributed 40 per cent, the United States 27 per cent, and Germany 14 per cent. The next item in order of importance is wheat flour, $349,200, all from the United States. Cattle imports, valued at $220,700 in 1905, but only $46,600 in 1906, were all from Spanish America. More than half of the woolen-cloth imports came from the United Kingdom, one-fourth from Germany, and one-eighth from France. Imports of iron and manufactures thereof, exclusive of railway materials, amounted to $1,881,900, of which the United Kingdom furnished more than one-third, the United States one-fourth, and Germany a little more than one-fourth. Of this, machinery was imported in 1906 to the value of $164,600, of which the United States furnished more than three-fourths. Of the total rice imports, amounting to $109,700, nearly one-half came from Germany. Nearly half the drugs and medicines imported came from the United States, the remainder in almost equal amounts from the United Kingdom, France, and Germany. More than half the tobacco imported came from the United States and about one-fourth from the United Kingdom. Of the wine imported, 53 per cent came from France and 41 per cent from Spain. Of leather and manufactures thereof imported, more than half came from the United States and about one-third from Germany.

Among articles of minor importance imported, the following are furnished exclusively or almost exclusively by the United States: Steam boilers, salt pork, iron cisterns, dynamite, gasoline, corn, peanuts, sugar mills, grain-milling and rice-milling machinery, candle-making machinery, dairy apparatus, lumber-sawing machinery, windmills, mules, precious stones, rosin, tallow, wheat, bicycles, boots and shoes, salt beef, wagons and accessories, corn meal, manila rope, lumber, lard, sewing machines, typewriters, shoemaking machinery, electric appliances, street-car material, agricultural implements, petroleum, powder, and saws.

Gold specie was imported in 1906 to the value of $624,613, of which $518,000 was coin and $106,613 United States notes, equivalent to gold. What amount of this was imported by the United Fruit Company for the payment of its employees and other expenses is not stated, but in 1904 the relative shares were as follows:

Gold imported by the Costa Rican Government	$190,965
Gold imported by the United Fruit Company	250,000
United States notes imported by United Fruit Company	77,000
Total	517,965

The exports of gold in 1906 were $43,242, leaving a gain of $561,369 of gold and United States notes, equivalent to gold in circulation.

TARIFF.

The Costa Rican tariff consists of a little over one hundred schedules providing for specific rates on various products, divided into ten groups. By decree of June 14, 1901, a surtax of 15 per cent on the customs duties was established, and a permanent commission created for the preparation of a new tariff in which "articles of luxury and such manufactures as are capable of being turned out in the country shall be liable to the highest import duties, the minimum rates being applied to goods of primary necessity for consumption and to raw materials required for supplying and developing native industries." This commission has been recommending from time to time changes in the tariff, which are being enacted. In addition to the regular rates, wharfage dues and port charges are also levied.

GUATEMALA.

[Area, 46,774 square miles; population in 1903, 1,842,000.]

The total commerce of Guatemala in 1905, the latest year for which statistics are available, was $15.082,000, of which $6,844,000 were imports and $8,238,000 exports. Of the imports 44.8 per cent was drawn from the United States, and of the exports 34.9 per cent was sent to the United States. The official figures of the United States with reference to its trade with Guatemala show that the imports therefrom have grown from $2,281,681 in 1890 to $2,402,978 in 1900 and $3,872,538 in 1907, and the exports thereto decreased from $1,345,719 in 1890 to $785,462 in 1900 and then increased to $2,848,864 in 1907.

COMMERCE.

Guatemala passed through a severe crisis in 1902, having been visited in April by a terrible earthquake and in October by an eruption of the volcano of Santa Maria, which overwhelmed the coffee and other plantations in the west with heavy deposits of dust and cinders. The effect of these catastrophes was a diminution in exports, and, in consequence of the diminished purchasing power of the people, also a diminution in imports. Since then the exports have increased considerably and the imports have nearly doubled.

Since 1897 the value of the exports has exceeded that of the imports, except in 1906, as may be gathered from the following table:

TABLE 40.—COMMERCE OF GUATEMALA, 1896–1906.

YEARS.	Imports.	Exports.	YEARS.	Imports.	Exports.
	Dollars.	*Dollars.*		*Dollars.*	*Dollars.*
1896	11,429,194	9,972,825	1902	4,016,870	9,031,508
1897	8,584,821	7,910,344	1903	2,971,638	6,718,986
1898	4,850,835	4,881,733	1904	5,041,142	7,551,867
1899	3,757,555	8,370,556	1905	6,844,444	8,237,758
1900	3,127,102	7,393,204	1906	7,220,760	7,136,280
1901	4,258,956	7,519,485			

The distribution of the imports by countries of origin is shown in Table 41 for all recent years for which statistics are available, from which it appears that, as is the case with all Central American countries, the United States occupies the most important place and

the United Kingdom the second place, Germany following close behind. In 1900 the share of the United States in the total imports was 46 per cent, in 1903 44 per cent, and in 1906 42 per cent; during the same time the share of the United Kingdom decreased from 25 to 21 per cent, while that of Germany increased from 12 per cent in 1900 to 20 per cent in 1903 and 23 per cent in 1906; and that of France is about 5 per cent. The relative positions of these countries now evidently remain constant, with the exception of the growth of the German share, the imports from Germany having increased fivefold within the last six years, while those from the United States and the United Kingdom have only doubled. The predominance of the United States is partly explained by the fact that it furnishes almost the entire supply of wheat flour and railway materials, two important items of import into Guatemala.

TABLE 41.—IMPORTS INTO GUATEMALA, 1900 AND 1903–1906, BY COUNTRIES.[a]

[a] From Berichte über Handel und Industrie, Nov. 13, 1905; British Diplomatic and Consular Reports, No. 3924.
[b] Includes Belize.
[c] Includes the whole of South America.
[d] Included in United Kingdom.
[e] Included in "All other countries."

As shown in Table 42, the importance of the three leading commercial countries as markets for Guatemalan exports is even greater; Germany, the United States, and the United Kingdom having taken in 1906, 53.5, 30.3, and 12.1 per cent, respectively, of the total exports, or together 95.9 per cent. Even within this brief period for which statistics are available, the rapid growth of the shipments to Germany may be noticed, for in 1904 only 46.5 per cent went to that country, while the exports to the United Kingdom have fallen off from 17 to 12 per cent.

From a German authority is taken the following statement of the distribution of the Guatemalan imports and exports for the decade 1894 to 1904, expressed in percentages of the total:

TABLE 43.—DISTRIBUTION OF THE COMMERCE OF GUATEMALA IN THE DECADE 1894 TO 1904, BY COUNTRIES.

COUNTRIES.	Imports.	Exports.
	Per cent.	*Per cent.*
Germany	19.97	58.79
United States	36.59	25.86
United Kingdom	22.62	15.37
France	9.21	2.40
Other countries	11.61	2.58
Total	100.00	100.00

This predominance of Germany is explained by the fact that the largest coffee plantations in Guatemala belong to Germans. For the period 1894 to 1904 the exports to Germany constituted 59 per cent of the total exports. The United States took one-fourth and the United Kingdom a little less than one-sixth.

All other articles	1,042,995	[d] 1,268,280	[e] 1,843,090
Total imports	4,032,910	[d] 5,475,560	[e] 5,784,430

[a] Compiled from British Diplomatic and Consular Reports, Nos. 3469, 3686, and 3924.
[b] Not separately stated.
[c] Includes articles partly of iron.
[d] Includes $594,605 in free goods and $24,950 in imports by land, of which no classification was made.
[e] Includes $599,610 in free goods and $39,110 in imports by land, of which no classification was made.

The principal articles imported into Guatemala during the years 1904 to 1906 are shown in Table 44, compiled from the report of the British consular agent. It appears that cotton goods constituted the most important article and amounted in 1906 to $1,622,000, or almost 30 per cent. Second in importance are the imports of iron and steel manufactures, amounting to $800,000, which is considerable for a small country like Guatemala; moreover, these imports are rapidly growing, an increase of 80 per cent having taken place within two years, since in 1904 they amounted to only $440,000. Wines and liquors, drugs and chemicals, and woolen goods amounted to from $200,000 to $250,000 each. The imports of wheat flour were considerable both in 1904 and in 1905, reaching the sum of $580,000 in the latter year, no data being available for 1906. The bulk of the remainder of the imports, as far as classified, consists of coal, linen goods, leather and its manufactures, paper and its manufactures, silk goods, and wood and its manufactures. From $500,000 to $600,000 worth is imported annually free, and is not classified as to its nature. Of the important articles enumerated above, more than half the cotton cloths and almost all the cotton yarn come from the United Kingdom. On the other hand, all the wheat flour

and almost all the railway materials and a considerable part of the machinery and implements come from the United States. Germany contributes considerable quantities of cotton goods, chemicals, and machinery.

The exports of principal articles from Guatemala are shown in Table 45, as far as data are available, namely, from 1900 to 1906. Coffee is by far the largest item of export, forming from 84 to 90 per cent of the total exports during each of these six years. Other items of some importance are hides, rubber, timber, and bananas, which do not show any tendency to increase; the exports of rubber show some decline. The exports of sugar have fallen off considerably within the last five years.

TABLE 45.—EXPORTS FROM GUATEMALA, 1900–1906, BY PRINCIPAL ARTICLES.[a]

[a] Compiled from British Diplomatic and Consular Reports, Annual Series, Nos 2868, 3469, 3686, 3924.

The predominating importance of coffee in the exports from Guatemala justifies the following table, showing the amount of the exports and its distribution in the main markets:

TABLE 46.—EXPORTS OF COFFEE FROM GUATEMALA, 1896–1906, BY COUNTRIES.[a]

YEARS.	Total exports.	To Germany.	To United States.	To United Kingdom.	To all other countries.
	Pounds.	*Pounds.*	*Pounds.*	*Pounds.*	*Pounds.*
1896	68,772,633	44,268,078	11,962,467	10,332,847	2,209,241
1897	82,475,585	54,380,672	13,705,552	12,327,740	2,061,621
1898	82,603,283	49,927,011	12,837,323	17,999,913	1,839,036
1899	84,194,432	48,702,080	15,696,352	18,390,400	1,405,600
1900	72,982,448	44,416,068	14,057,120	11,467,680	3,041,580
1901	75,414,528	41,227,872	24,340,160	8,412,320	1,434,176
1902[b]	77,402,200	39,554,100	20,887,100	10,516,100	6,444,900
1904[b]	64,766,400	32,060,740	19,159,940	12,442,100	1,103,620
1905	90,811,392	(c)	(c)	(c)	(c)
1906	76,663,328	42,508,032	22,293,040	9,856,336	2,005,920

[a] Compiled from British Consular and Diplomatic Reports (1896–1901 and 1905–1906); Handelsarchiv, 1904, Vol. II, p. 74 (1902), and Berichte über Handel und Industrie, Vol. VIII, p. 728 (1904).
[b] 20 per cent of the weight of the unshelled beans discounted.
[c] No data available.

The total exports of coffee are found to have been decreasing during the last few years. The table somewhat exaggerates this decline, inasmuch as the German sources from which the data for 1902 and 1904 are taken discount 20 per cent of the weight of the unshelled beans, while the figures for 1896 to 1901 represent the gross weight. But even the gross weight of the coffee exported in 1904 was only 64,766,000 pounds, against 84,194,000 pounds in 1899.

While Germany remains the main market for Guatemalan coffee, taking 55 per cent in 1906, the share shipped to the United States has shown a constant increase, from 17.4 per cent in 1896 to 29.6 per cent in 1904.

TARIFF.

The tariff of Guatemala contains 3,000 schedules, providing specific rates for various imports. Additional surtaxes and charges are levied similar to those levied in other Spanish-American countries.

HONDURAS.

[Area, 45,000 square miles; population in 1901, 544,000.]

The total commerce of Honduras in 1906 was $5,392,000, of which $2,512,000 were imports and $2,880,000 exports. Of the imports 63.1 per cent was drawn from the United States, and of the exports 87.2 per cent was sent to the United States. The official figures of the United States with reference to its trade with Honduras show that the imports therefrom have grown from $984,404 in 1890 to $988,606 in 1900 and $2,296,556 in 1907, and the exports thereto from $552,024 in 1890 to $1,181,453 in 1900 and $1,833,056 in 1907.

COMMERCE.

The imports and exports of Honduras during the last eight fiscal years are shown in Table 47, compiled from various foreign sources because of the unsatisfactory condition of the commercial statistics of Honduras:

TABLE 47.—COMMERCE OF HONDURAS, 1899–1906.[a]

YEARS.[b]	Imports.	Exports.	YEARS.[b]	Imports.	Exports.
	Dollars.	*Dollars.*		*Dollars.*	*Dollars.*
1899	1,404,016	1,155,070	1903	1,437,009	1,755,062

1902[c]	1,750,865	2,468,142	1906	2,511,610	2,879,949

[a] 1899, 1900, 1901, 1903, and 1906 from British Diplomatic and Consular Reports; 1904 and 1905 from Memoria Presentada á la Asamblea Nacional Constituyente, 1903–1905.
[b] Since 1903 years ended July 31; years 1899–1901 ended June 30, according to statement of British consul reporting.
[c] From Bulletins of the Bureau of American Republics, which do not state whether fiscal or calendar year is meant.

While the foreign trade of this Republic is not very great, it has shown a healthy growth within the last few years. The steady increase both in exports and imports since 1899 was interrupted by a decline in the fiscal year 1902–3, due to internal disorders, but this has been followed by a rapid rise in exports and a still greater rise in imports, so that the trade is now more than double that of 1899. The distribution both of the import and export trade by countries is shown in Table 48.

TABLE 48.—IMPORTS INTO AND EXPORTS FROM HONDURAS, YEARS ENDED JULY 31, 1903–1906, BY COUNTRIES.[a]

Total	1,755,062	2,172,582	2,419,132	2,879,949

[a] Data for 1904 and 1905 from Memoria Presentada á la Asamblea Nacional Constituyente, 1903–1905; 1903 from British Diplomatic and Consular Reports, Annual Series, No. 3334; 1996 from No. 3756, same series.

The United States is far ahead of all other countries both in the imports and exports, her share in 1906 being about two-thirds of the imports and almost seven-eighths of the exports. It absorbs an increasing share of the exported products of Honduras, since in 1903 only 74 per cent of the total exports were consigned to the United States. The main competitors of the United States in the markets of Honduras, the United Kingdom and Germany, contributed in 1906 only a little over 10 per cent each, and France only 4 per cent, of the imports. As a market for the exports of Honduras, Cuba was quite important, taking in 1904 about 15 per cent, but the exports to Cuba rapidly fell to 7 per cent in 1905 and to less than 3 per cent in 1906, while the exports to Germany have materially increased, from less than 1 per cent in 1903 to almost 5 per cent in 1906.

In Table 49 the nature of the exports from Honduras is shown, as far it was possible to obtain the information, mainly from the reports of the British consular agents, for the eight years ended in 1906. Bananas are seen to constitute the main article of export, constituting nearly 40 per cent of the total. Nearly all of the bananas exported go to the United States. A few other agricultural products are exported, though in much smaller quantities, namely cocoanuts, rubber, and mahogany and cedar woods, but amounting together in the fiscal year 1906 to less than $200,000. The articles next in importance to bananas are silver in bars, and various ores of the precious metals. Especially rapid has been the increase in the exports of the ores, from less than $20,000 in 1899 to over $800,000 in 1906, while the exports of silver bars have not shown a corresponding increase. Some live stock is exported, mainly to Cuba and to the neighboring Central American States.

[a] Compiled from British Diplomatic and Consular Reports, Nos. 2463, 2756, 3334, and 3756, except 1901-2, compiled from "Honduras 1904," published by the International Bureau of the American Republics.
[b] Includes all fruit.
[c] No data.
[d] Includes all skins.
[e] Includes all woods.
[f] Included in "Cattle hides."

Honduras does not publish detailed statistics of her import trade by articles, and the following data are therefore based on the export statistics of the three most important countries in this respect, viz, the United States, the United Kingdom, and Germany. The chief item in the import trade is cotton goods, which in 1906 formed nearly one-third of the total exports from the United States to that country and more than two-thirds of the exports from the United Kingdom. The German figures, which group together Honduras, Nicaragua, and Salvador, also show a great preponderance of cotton goods in the exports, amounting to nearly one-fourth of the total German exports to those three countries. The next largest item in the imports is iron and steel and manufactures thereof, which formed about one-sixth of the exports from the United States to Honduras, while in the case of the United Kingdom it is slightly less than the exports of woolens to Honduras. Another large item is wheat flour, practically all from the United States. Manufactures of leather, mineral oil, and provisions complete the list of the more important items of importation.

TARIFF.

The import tariff of Honduras comprises more than 1,600 schedules, all specific duties being charged according to weight, the only exception being wood for building purposes, which is dutiable per 1,000 square feet. The rates range all the way from very low revenue duties to high protective duties. Export duties are levied on caoutchouc, mahogany, cedar, and cabinet woods, and sarsaparilla.

HONDURAS, BRITISH.

[Area, 7,562 square miles; population in 1901, 37,479.]

The total commerce of British Honduras in 1905, the latest year for which statistics are available, was $3,712,000, of which $1,877,000 were imports and $1,835,000 exports. Of the imports 50.9 per cent was drawn from the United States, and of the exports 52.1 per cent was sent to the United States. The official figures of the United States with reference to its trade with British Honduras show that the imports from that country have grown from $186,831 in 1890 to $198,040 in 1900 and $754,581 in 1907, and the exports thereto from $354,468 in 1890 to $615,522 in 1900 and $1,280,540 in 1907, these being fiscal-year figures in all cases.

COMMERCE.

While the foreign commerce of all the Central American Republics has shown within recent years a tendency toward healthy growth, the colony of British Honduras has rather retrograded commercially. This was especially noticeable in the middle of the last decade of the nineteenth century, since which time the volume of trade has been increasing somewhat. A probable explanation may be found in the fact that the port of Belize was formerly an important commercial center for the distribution of the European imports to Central America and the concentration of Central American products for shipment to Europe. With the improvement of direct steamship connections between Europe and the various Central American ports, Belize has lost a considerable part of this trade. The population of the colony is extremely small, only 36,668 in 1904, occupying an area of 7,562 square miles, or a little less than 5 inhabitants per square mile. A great part of the area of Honduras is covered with forests, though lumbering, continued for many years, has denuded a considerable part of it. The exports of British Honduras still consist mainly of timber, though within recent years the exports of fruits and nuts and some other agricultural products have been growing. In 1890 the exports of timber amounted to $775,000, or about 80 per cent of the total, while in 1904, the latest year for which statistics are available, they amounted to $742,000, or only 67 per cent. There has been some change in the classes of the wood exported; logwood, which fifteen years ago constituted two-thirds of the total exports, at present amounts to less than one-fourth, while the exports of mahogany have increased from 5 million cubic feet, worth $265,000, in 1890, to 9 million cubic feet, worth $531,000, in 1904. For the same period, exports of bananas have increased from 350,000 bunches to 508,000 bunches, and cocoanuts from 1,300,000 nuts to 3,400,000. The increase in the exports of sapodilla gum have been quite remarkable since they first appeared on the records in 1894, with exports worth $400; in 1904, ten years later, they amounted to $120,000.

The imports into British Honduras are of about the same nature as those of most Central American countries, with perhaps the distinction that a vastly greater proportion consist of consumption goods, there being scarcely any imports of raw materials or machinery and implements. The most important items are wheat flour, rice, meat, provisions and dairy products, distilled spirits, tobacco and its manufactures, wines, boots and shoes, drugs and chemicals, live animals, cotton manufactures, other textiles, and clothing, while in other Central American countries, such as Costa Rica, the growth in imports of various machinery has been quite noticeable. The trade of British Honduras, or practically Belize, which port is credited with 97 per cent of the tonnage of vessels arrived in 1904, is mainly with two countries, the United States and the United Kingdom, but to a small extent also with its neighbor, Mexico. In 1904 about three-fifths of the imports came from the United States, more than one-fourth from the United Kingdom, and about 10 per cent from Mexico, leaving less than 5 per cent for all other countries. Of the exports of the products of British Honduras, about 35 per cent were destined for the United Kingdom and almost 60 per cent for the United States. In addition to this, Belize exported foreign products to the amount of about $750,000, some of which were products of other Central American countries, and some other merchandise brought there from Europe or the United States. In 1904 the United States took from British Honduras all the bananas it exported, nine-tenths of its cocoanuts, almost all its sapodilla gum, all its plantains and rubber, most of its cedar, and more than half of its mahogany. The exports to the United Kingdom consist mainly of mahogany and logwood. As to the imports, most of the animal and vegetable food products were imported from the United States, as well as most of the hardware, cotton goods, drugs and chemicals, etc. The imports from the United Kingdom consisted mainly of malt liquors, ready-made clothing, confectionery, cotton goods, rice, paints, silks, soap, and tea.

For detailed statements of the trade of British Honduras by countries and articles for the last fifteen years, see pages 74, 89, and 90.

NICARAGUA.

[Area, 49,200 square miles; population, about 500,000.]

The total commerce of Nicaragua in 1905, the latest year for which statistics are available, was $6,836,000, of which $3,447,000 were imports and $3,389,000 exports. Of the imports 55.3 per cent was drawn from the United States, and of the exports 49.9 per cent was sent to the United States. The official figures of the United States with reference to its trade with Nicaragua show that the imports therefrom have decreased from $1,655,690 in 1890 to $1,520,266 in 1900 and $1,028,166 in 1907, and the exports thereto increased from $1,373,019 in 1890 to $1,817,869 in 1900 and $1,923,111 in 1907.

In the several tabular statements which follow, the trade of Nicaragua is given by countries and by articles for the years 1898 to 1904, as far as information is available. The violent fluctuations of the Nicaraguan currency, coupled with the fact that the statistics of the earlier years until 1903 and especially the data for exports are stated in that fluctuating currency, make the determination of the actual amounts of the trade a very difficult matter. The tables were compiled from the reports of the Nicaraguan Government and have been converted at the rate of exchange indicated in these publications. It must be pointed out though that the values thus obtained are greatly at variance with those published by the British consuls, and it was impossible to determine the causes of these differences.

The exports from Nicaragua amount to about 3 to 4 million dollars annually, except for 1902, when the small value stated in Table 50 was the result of the very high rate of exchange for gold, though in the currency of the country the exports for 1902 were even greater than for 1901. Since 1899 the United States has held the lead among the purchasers of the products of Nicaragua, taking annually from 50 to 60 per cent of the total exports, though in 1898 both Germany and the United Kingdom were ahead of the United States. In 1904, the latest year for which data are available, 53 per cent were sent to the United States, 13 per cent to Germany, and about 12 per cent each to the United Kingdom and France. These exports consist mainly of coffee, of which over 20 million pounds were exported, valued at $1,404,000, or 36 per cent of the total exports. Next in importance in 1904 came timber and lumber, consisting mainly of mahogany, and amounting to $840,000, or nearly 22 per cent. Some mahogany was exported in the years 1898 to 1900, but the exports were almost discontinued in the subsequent three years, amounting in 1903 to $17,000 only, so that the high exports of 1904 seem to indicate a sudden revival of the forest industry. Among other articles of export may be mentioned bananas, cattle, and india rubber. The exports of the latter, however, are not as large now as they were five or six years ago. While the exports thus seem to consist of agricultural products mainly, some quantities of gold dust are also exported, varying in value from $300,000 to $800,000 annually. The United States takes practically all the bananas exported, almost all the mahogany, all the rubber, and almost all the gold, but very little coffee, which constitutes the bulk of the exports to the other countries mentioned above. Thus, coffee comprises 99 per cent of the exports to Germany and 96 per cent of the exports to France, but only 54 per cent of the exports to the United Kingdom, to which country are also exported some quantities of mahogany and gold.

[d] Not separately stated.

In the import trade of Nicaragua the preponderance of the United States is equally great, more than half having come from this country during the last five years, although as late as 1898 the United Kingdom sent almost twice as much as the United States. About 24 per cent of the imports in 1904 came from the United Kingdom, about 13 per cent from Germany, and 8 per cent from France. These consist mainly of cotton manufactures, provisions, flour, iron and steel manufactures, and many other manufactured articles.

[b] Compiled from British Diplomatic and Consular Reports, No. 2329. Data for the port of Bluefields not included in official publication of Nicaragua.
[c] Included in "Central American States."
[d] Included in "All other."
[e] Includes $746,808 imports into Atlantic coast ports not classified.

COMMERCE.

According to a report of the British foreign office, all the flour, kerosene, building lumber, dynamite, leaf tobacco, windmills, and imitation jewelry come from the United States, which also occupies first place in supplying provisions, agricultural machinery, hardware, drugs, rice, manufactures of silk, hempen rope, tramway rails, leather, tallow, beer, barbed wire, spirits, paints, sewing machines, candles, manufactured tobacco, umbrellas, and salt.

The United Kingdom leads in manufactures of cotton and wool, soap, jute bags, and lubricating oil; Germany in paper, hats, matches, ready-made clothing, manufactures of glass, Portland cement, earthenware, prussian blue, and pianos, while France ranks first in wines and perfumery. The United Kingdom appears first in the importation of firearms, but in these returns does not appear the value of the arms introduced by the Government of Nicaragua for military purposes, nearly all of which come from the United States. No returns are obtainable of the value of gunpowder, percussion caps, shot, and cartridges imported. The sale of these articles is a Government monopoly, and they do not pass through the custom-house, but all or nearly all of them were received from the United States.

A noticeable item is the almost complete monopoly held by the United States in the sale of boots and shoes. Until recently these goods were imported from Austria-Hungary, a few coming from the United Kingdom, France, and Germany. Most of the better class of boots and shoes are now imported into Nicaragua from New Orleans, while coarser boots for workmen are received from Boston.

Beer comes from the United States and Germany, and the greater part of the ordinary soap is from the United Kingdom, but imports of the latter article have of late years been much reduced, owing to the establishment of several native soap factories that turn out a fairly good article, and as the materials are admitted duty free the product is able to compete successfully in prices with foreign soap. All the tallow and most of the materials used in soap making come from the United States.

The leather imports, which amount in value to about $30,000 per annum, are nearly equally divided between the United States and Germany.

[b] Not separately stated.
[c] Includes $715,600 imports into port of Bluefields not classified.
[d] Includes $11,358 in Nicaraguan treasury notes.

TARIFF.

The tariff of Nicaragua contains over 1,600 schedules providing specific rates of duty on imports. The duties are in several cases quite high, although a large number of products required in the industries are admitted free, such as lumber, charcoal, wood pulp for paper making, railway appliances, iron and steel products, etc. Goods not mentioned and not resembling any articles mentioned in the tariff are subject to a duty of "150 per cent of their value, according to the consular invoice." The law further provides that if such goods "consist of raw materials similar to those of national production they shall be chargeable with duty at the rate of 200 per cent of the amount of the invoice." Should unenumerated articles consist of materials for arts or trade or for agricultural or industrial purposes and not be serviceable for ordinary use, but for especial and exclusive service, "they shall be assessed with a duty of 100 per cent of the amount of the invoice."

PANAMA.

[Area, 31,570 square miles; population, estimated at 340,000.]

The total commerce of Panama in 1904, the latest year for which statistics are available, was $1,845,000, of which $759,000 were imports and $1,086,000 exports. Of the imports 68.7 per cent was drawn from the United States, and of the exports 96.6 per cent was sent to the United States. The official figures of the United States with reference to its trade with Panama show that the imports therefrom have grown from $440,747 in 1904 to $813,154 in 1905, $1,065,887 in 1906, and $1,752,314 in 1907, and the exports thereto from $979,724 in 1904 to $4,745,562 in 1905, $12,460,289 in 1906, and $16,150,953 in 1907.

The bulk of the population of Panama is concentrated on the Pacific slope of the Cordillera, west of Panama City, and, with the exception of the towns of Panama and Colon (20,000 and 3,000 inhabitants, respectively), all the more important towns are in the interior, evidently for hygienic reasons. The eastern part of the Republic, comprising most of the province of Panama, which stretches from the Canal Zone to the Colombia boundary, is mostly

a wilderness, the only settlements being those along Tuira River, in the southeastern corner.

The soil is of great fertility and the climate induces luxuriant growth of tropical vegetation; of the whole area about one-half is unoccupied, and of the remainder only a small part is properly cultivated. Bananas are the most important crop, the industry being concentrated in the province of Boca del Toro, in the northwest corner, which depends almost entirely on this crop. Coffee is grown in all the inhabited districts, the best results being obtained in Chiriqui Province, near the Costa Rican frontier (500,000 trees), and in the Cocle Province (50,000 trees). Cacao grows in many parts, but best in Cocle Province (southwest of the Canal Zone). Tobacco of good quality is produced, but not in sufficient quantity to supply the home demand. Sugar cane is raised in Chiriqui, Los Santos, Cocle, and Veraguas provinces. Corn, rice, and other cereals are grown, but not enough to supply the home demand. Rubber is collected in the mountains and near the coast. Cotton, indigo, vanilla, cocoanuts, cloves and other spices, tropical fruits and vegetables, palms, ivory nuts, sarsaparilla, and ipecacuanha grow wild and in cultivation.

MANUFACTURES.

Except a few small soap, match, chocolate, ice, and aerated water factories, Panama can not be said to have any manufactures. A carbonating plant has been established at the Paraiso Springs, in the Canal Zone, 8 miles from Panama. The plant is equipped with American machinery. A central school for the manufacture of "Panama hats" has been established in the district of Arrijan, a little west of Panama City. At present "Panama hats" are made in Ecuador.

The prospect of security and of a large influx of capital has led to increased immigration and colonization. The main obstacle, the unsatisfactory reputation the country has borne from a sanitary point of view, will probably be lessened by the labors of the sanitary commission. In fact, that reputation, which grew out of conditions in the two cities of Panama and Colon, has been unjustly extended to the whole country. The larger part of the Republic is mountainous, and therefore not subject to the miasmas which create the fevers in the lowlands. The tract to be colonized is in the southeastern part of the Republic, which at present is almost uninhabited. It is very well watered, an excellent grazing country, and rich in minerals. Each foreigner who will undertake to establish cultivation of any kind or to raise live stock there will receive 247 acres of land and an advance, not to exceed $1,000 in gold, for transportation of himself and family and for seeds, implements, etc., repayments to be made, without interest, in five annual installments.

TRANSPORTATION.

The Panama Railroad, completed on January 28, 1855, is the most important means of transportation on the Isthmus. It is a single-track 5-foot gauge road, 47½ miles in length, connecting the cities of Colon and Panama. It handles the local trade, but its importance lies chiefly in the transit trade between the Atlantic and Pacific. In 1903 this transit trade amounted to 281,778 tons, or 80 per cent of a total freight tonnage of 349,538 tons; during the same year 77,865 passengers were carried. In 1904 the total traffic was 415,000 tons, of which 366,570 tons, or 81.46 per cent, was transit; 114,000 passengers were carried. Of the total tonnage, 56.71 per cent was west bound and 43.29 per cent east bound in 1904. The road is controlled by the United States Government, which owns over 97 per cent of the stock. Two wagon roads lead out of Panama—one, the Royal road, extends northwest a distance of 17 miles to Cruces; the other, an old and little used road, reaches across the Isthmus to Porto Bello, almost due north of Panama. There are no other highways in the country, except crude roads and trails along the railway and in the vicinity of the larger towns; but an extensive network of new roads has been planned and in part begun.

The chief ports and trade centers on the Isthums are Colon, Boca del Toro, and Panama, in the Republic of Panama; and Cristobal and Ancon, in the Canal Zone. Other ports are, on the Atlantic side, Porto Bello and Chagres; on the Pacific side, Aguadulce, San Miguel (Pearl Islands), Taboga (island of Taboga, off Panama City), and Flamenco (Canal Zone). Steamship lines making regular calls at Colon include three British (Royal Mail Steam Packet Company, Leyland Line, Harrison Line), one German (Hamburg-American), one French (Compagnie Générale Transatlantique), one Italian (La Veloce, for Genoa and Trieste), one Spanish (La Compañía Trasatlántica de Barcelona), and one American (Panama Railroad Steamship Company). The American line has a weekly service between Colon and New York. The United Fruit Company has also vessels plying between New Orleans and Mobile and Colon and Boca del Toro. Camors, McConnell & Co. make connection between Mobile and Boca del Toro about eight times a month; the Di Giorgio Steamship Company, Mobile to Boca del Toro, twice a month. On the Pacific side the steamers of the Pacific Steam Navigation Company, of Liverpool, and of the Chilean Steamship Company, of Valparaiso, maintain weekly communication between Panama and the principal ports of South and Central America; the Pacific Mail Steamship Company maintains a weekly service between Panama and San Francisco, calling at the principal Central American ports; and the German Kosmos Line calls about once a month, establishing communication with the principal ports of the west coast of North and South America.

COMMERCE.

Statistics of the commerce of Panama are difficult to obtain, as they were merged with those of Colombia previous to November, 1903, and the machinery of the new Government was not fully organized for some time after its establishment. A large part of the records of the port of Panama, moreover, was destroyed by fire in June, 1904. The only statistics available of the total foreign trade are those of imports into Colon for the fiscal years 1903 and 1904, and imports into and exports from Boca del Toro for the fiscal year 1904. The publication of monthly returns of the foreign trade of Panama was begun by the recently organized general statistical office of the Republic in the fall of 1907, so that full returns will be available in the future. The trade of the United States with Panama is shown elsewhere in this report.

During the second half of 1903 the total imports into the Republic were $835,043, of which the United States contributed more than one-third, the United Kingdom a little less than one-third, and Germany one-sixth. In the second half of 1903 the following articles came almost exclusively from the United States: Carts, trucks, cement, flour, wheat, hams, rubber manufactures, lard, canned goods, cars, petroleum, phonographs, resins, turpentine, and typewriters. The United States tables of imports from and exports to Panama for the four fiscal years ended June 30, 1907, show that the imports from Panama almost quadrupled, while the exports to Panama increased more than sixteen times.

The largest item in the imports into the United States from Panama is bananas, valued at $263,000 in 1904, $415,000 in 1905, and $713,442 in 1906, constituting in the first two years more than one-half and during 1906 almost three-fourths of the total imports. By far the larger share is exported through Boca del Toro and the remainder through Colon. The next largest item is india rubber ($77,700 in 1904, $154,000 in 1905, $98,750 in 1906, and $146,968 in 1907). Imports of hides and skins, the next largest item ($37,000 in 1904, $92,000 in 1905, $91,000 in 1906, and $146,000 in 1907), have nearly quadrupled. Imports of cabinet woods have risen from $27,000 in 1904 to $84,000 in 1907. This trade admits of vast extensions, as the resources of Panama in that respect have hitherto remained almost undeveloped, owing to the difficulty of transportation.

Among the exports from the United States to Panama all articles show a great increase from 1903 to 1906, and in most cases the

increase is two or three fold. The greatest increase is shown in exports of iron and manufactures thereof, which rose from $105,323 to $4,728,858. In machinery the increase was from $26,312 to $2,107,932. The great increase in exports of wood, from $62,886 to $1,951,717, is explained by the demand for lumber in the erection of dwellings, wharves, and for framework. The increase in the exports of vehicles, from $7,675 to $1,619,477, testifies to the increased activity in railway and other transportation. The increased exports of foodstuffs (wheat flour, $67,650 to $349,730; bacon and hams, $8,584 to $125,688; lard, $39,321 to $458,470), manufactures of cotton ($107,605 to $796,572), boots and shoes ($39,436 to $420,894), and medicines ($16,107 to $92,423) bear evidence of the increase of population and of the increased purchasing power due to the large disbursements of American money.

TARIFF.

The tariff of Panama provides for a general duty of 10 per cent on the invoice value of imports. Some articles, such as liquors, neat cattle, salt, tobacco, matches, etc., are subject to special rates. According to the agreement between the United States and Panama, wares and merchandise imported for use in the construction of the canal or maintenance of the Panama Railroad or for sale by the Government commissary to the employees of the Government may enter the zone by the ports of the Republic of Panama free of duty. Goods intended for sale or general consumption are not admitted through the ports of the zone and are required to pass through the ports of the Republic of Panama and are subject to the general customs duties. In addition to the duty proper, there are also a number of additional taxes and consular fees.

SALVADOR.

[Area, 7,225 square miles; population in 1901, 1,006,848.]

The total commerce of Salvador in 1905, the latest year for which statistics are available, was $9,986,000, of which $4,346,000 were imports and $5,640,000 exports. Of the imports 31.2 per cent was drawn from the United States, and of the exports 21.8 per cent was sent to the United States. The official figures of the United States with reference to its trade with Salvador show that the imports therefrom have fluctuated between $1,453,958 in 1890, $738,674 in 1900, and $1,171,187 in 1907, and the exports thereto between $899,546 in 1890, $679,440 in 1900, and $1,603,166 in 1907.

COMMERCE.

The commerce of Salvador for the last six years for which statistics are available was as follows (in gold):

TABLE 54.—COMMERCE (INCLUDING BULLION AND SPECIE) OF SALVADOR, 1900–1905.

	1900	1901	1902	1903	1904	1905
	Dollars.	*Dollars.*	*Dollars.*	*Dollars.*	*Dollars.*	*Dollars.*
Imports	2,688,000	2,615,151	2,746,517	3,088,478	3,610,377	4,346,070
Exports	4,095,925	4,761,651	3,915,976	5,556,153	6,950,628	5,639,533

This table shows that with the exception of 1905 the exports have regularly been nearly twice as large as the imports; and about the same proportion holds true in the case of the exports during earlier years, the exports in 1895 and 1896 having been more than double the imports.

The foreign trade of Salvador is distributed mainly among the same four countries which divide nearly the entire Central American trade, namely, the United States, the United Kingdom, France, and Germany. Of the exports from Salvador, nearly 30 per cent are absorbed by France, and the share destined for the United States, constantly growing, has nearly doubled within the last four years, increasing from 16 per cent to 22 per cent of the total exports. The exports to Germany also nearly doubled, but those to the United Kingdom and Italy remained about the same. Altogether these five countries took nearly 94 per cent of the total exports in 1905. (See Table 55.)

In the nature of the articles exported Salvador bears a strong resemblance to its northwestern neighbor, Guatemala, coffee being by far the most important article. In 1901 the value of the coffee exported constituted 75 per cent of the total exports and in 1905 over 77 per cent. The other important articles are precious minerals, indigo, of which the exports are rapidly declining, and sugar. Small quantities of balsam, rice, rubber, tobacco, and some hides and skins are also exported.

All other countries	15,000	19,000	23,000	87,000
Total	3,582,000	2,922,000	4,072,000	5,644,000

Of the other articles of importance, nearly all the minerals went to the United Kingdom; of the indigo, France in 1903 took $109,000, the United Kingdom $47,000, Germany $43,000, and the United States $33,000 worth; of the sugar, the United Kingdom took $38,000, the United States $34,000, and Colombia $24,000 worth; of

the balsam, Germany took $61,000 and the United States $26,000 worth, these two countries sharing practically the entire crop between them.

Total	2,615,151	2,746,517	3,088,478	3,610,377	4,346,070

In Table 58 are shown the imports into Salvador by main countries of origin, and the same four countries are found at the top of the list which, as was shown above, absorb 94 per cent of its exports; but in the imports their share is not as great, being only 80 per cent in 1905. The most noteworthy feature of the import trade of Salvador is the rapid increase of the imports from the United States, which have nearly doubled in five years, and constituted in 1905 over 31 per cent of the total imports as against 28 per cent in 1901, this country occupying in 1905 for the first time the first place in the list of the importing countries, exceeding the United Kingdom by about $40,000, while in the preceding year the United Kingdom was ahead of the United States by about $300,000.

As is the case with all Central American countries, the imports into Salvador consist of small quantities of a large variety of manufactured articles ready for consumption, and food supplies, exchanged for the raw materials in the production of which the Central American countries have specialized. Cotton manufactures head the list of imported goods, constituting about 30 per cent of the total imports. Flour, ironware, drugs and medicines, soap and candles, cotton thread, etc., are imported in quantities varying from $100,000 to a quarter of a million dollars. Various other textiles, such as silks, linen, wool, and other dry goods; articles of food, such as wines, cheese, butter, liquors, beer, ginger ale, cacao, etc.; articles of household use, such as china, earthenware, perfumery, hats, glassware, matches, and furniture make up the bulk of the rest of the imports. (See Table 59.) Thus Salvador, like all the other Central American Republics, represents potentially a very active market for many lines of manufactures in which this country excels, and the rapid growth of imports into Salvador from the United States, as noticed in Table 58, is especially gratifying.

TABLE 59.—IMPORTS INTO SALVADOR, 1901–1905, BY ARTICLES.

United States	22,073	17,132	18,344	20,972
France	12,444	19,084	14,481	15,115

Shoes come nearly all from Germany and France; more than half the beer and ginger ale comes from the United States; more than one-third the foodstuffs come from the United States; two-thirds of the manufactured leather comes from Germany; woolen cloth is about equally divided between the United Kingdom and France; earthenware and china come nearly all from Germany; machinery nearly all from the United States; illuminating oil practically all from the United States; more than two-thirds of perfumery from France; cheese and butter practically all from Honduras and Nicaragua, in about equal parts; silk yarn in 1903 nearly all from China.

TARIFF.

The duties are practically all specific. In addition to the import duties proper, there are a number of taxes, custom-house charges for warehousing, and other fees, which, in some cases, greatly exceed the duties proper. Agricultural machinery, scientific instruments not specified in the tariff, barbed wire for fences, plows, and surgical instruments are among the articles admitted free of duty.

CHILE.

[Area, 307,620 square miles; population in 1903, 3,205,992.]

The total commerce of Chile in 1905, the latest year for which statistics are available, was $165,639,000, of which $68,839,000 were imports and $96,800,000 exports. Of the imports 10 per cent was drawn from the United States, and of the exports 16.1 per cent was sent to the United States. The official figures of the United States with reference to its trade with Chile show that the imports from that country have grown from $3,183,249 in 1890 to $7,112,826 in 1900 and $18,287,029 in 1907; and the exports thereto from $3,226,364 in 1890 to $3,287,565 in 1900 and $10,195,657 in 1907, these being fiscal-year figures in all cases.

The coast region of Chile rises steeply from the sea toward the Coast Cordillera, a diversified table-land not above 3,300 feet at its highest altitude. The Andes run along the eastern frontier and inclose with the Coast Cordillera the central valley or llano. At the south the coast is broken up into numerous archipelagos, islets, and peninsulas. This is a densely wooded region, with a very heavy rainfall and a sparse population. The northern region bordering on Peru is a desert country, thinly inhabited, but valuable as the source of the great saltpeter industry. Agriculture is thus confined to the central valley, where the largest estates are situated. A large part of the favorably situated agricultural land is in the possession of the ruling families and the Catholic Church, whose influence in Chile is greater than in any other of the South American States. It is estimated that about one-half of the population is engaged in agriculture, but is largely employed on the great estates.

The value of the crops of the year 1903–4 was estimated at over $22,000,000. Cattle raising is of minor importance. In 1906 the live stock of the country consisted of 698,880 horses, 2,477,064 head of cattle, 2,405,584 sheep, 287,612 pigs, and 461,908 goats; there were 27,936 mules and 17,574 asses in 1902.

The minerals of Chile, and especially the nitrate deposits, play at present the chief part in the economic development of the country. Since the acquisition of the Provinces of Tarapaca and Antofagasta from Peru and Bolivia, respectively, in 1884, the exploitation of the nitrate deposits has been the dominating factor in the industrial life of the country, affecting agriculture and the mineral industries, and providing a very large part of the country's revenue. The nitrate is found chiefly in Tarapaca and Antofagasta, and about 90 per cent of the total deposits is believed to be located in the former region. The deposits of Tarapaca were worked as early as 1830, but while the Province was under the dominion of Peru the industry was carried on on a comparatively small scale. It is only since the acquisition of the nitrate territories by Chile, when nitrate became an important factor in agriculture as well as in the chemical industry, that the industry has become an object of interest to the chief agricultural and industrial nations of the world. It is controlled to a large extent by English capital, but the German share is also important, German firms having contributed about one-fifth of the total exports of nitrate and subsidiary products in 1904–5.

The development of the nitrate industry may be seen from the following table:

TABLE 61.—AVERAGE ANNUAL EXPORTS OF NITRATES FROM CHILE, 1840–1904, BY FIVE-YEAR PERIODS.

PERIODS.	Average annual exports.	PERIODS.	Average annual exports.
	Tons.		*Tons.*
1840–1844	14,646	1875–1879	273,083
1845–1849	18,961	1880–1884	444,185
1850–1854	29,992	1885–1889	663,704
1855–1859	51,879	1890–1894	962,734
1860–1864	65,407	1895–1899	1,240,927
1865–1869	97,465	1900–1904	1,413,083
1870–1874	219,125		

TRANSPORTATION.

In railway transportation Chile is one of the most advanced countries in South America. The construction of railways has been facilitated by the configuration of the coast region, and accelerated by the existence of the nitrate deposits, which could not be worked without railway facilities. At the end of 1903 the railways of Chile had a total length of 2,885 miles, of which the Government owned 1,375 miles. The private lines are largely in the north, and are controlled by the Nitrate Railway Company. Of the longitudinal railway line which is to connect Tacna with Puerto Montt at the entrance of the Chiloe Archipelago 1,020 miles are in operation, and the remaining 1,058 miles, mostly in the northern section, have been partly surveyed. The short link in the Transandine line which is to connect Buenos Aires with Valparaiso is now under construction, and its completion is expected shortly. The cost of the State lines to the end of 1900 was $75,208,000. Besides the railways, Chile has more than 20,000 miles of roads and 700 miles of navigable waterways. The telegraph lines, which belong largely to the State, had a total length of more than 9,300 miles at the end of 1904.

COMMERCE.

Detailed information as to the foreign commerce of Chile for the last fifteen years and a more general review of its commerce since 1870 will be found in the tables on pages 67, 75, and 90 to 92. In this place only a more general statement can be given.

The exports from Chile are considerably larger than the imports, and show a higher increase during the last decade than the imports, which have increased only slightly. The increase in the exports occurs largely in nitrates, which have increased from 35 million dollars in value in 1895 to 67.3 millions in 1905. The total exports in 1895 were 54 million dollars and in 1905, 97 millions. Nitrate formed about 70 per cent of the exports in 1905.

The exports for 1905 were classified as follows: Animal products, $3,312,000; vegetable products, $5,193,000; mineral products, $80,365,000. The chief animal products were hides and skins, leather, wool, and wax. The most important vegetable products were barley and other cereals, dried fruits, flour, wheat, and various seeds. The chief mineral products included, besides nitrates, copper, iodine, gold, and silver.

The total imports for the same year (1905), which amounted to $68,838,000, were classified as follows: Animal products, $4,784,000; vegetable products, $6,740,000; mineral products, $13,482,000; textiles, $19,301,000; oils, fuel, and paints, $11,323,000; paper, cardboard, and manufactures of, $1,334,000; beverages and liqueurs, $738,000; perfumery, drugs, and chemicals, $1,173,000; machines, instruments, and apparatus, $9,142,000, and arms, ammunition, and explosives, $576,000. The chief items in the group of animal products were live animals, fish, and leather. The chief vegetable products were coffee, yerba maté, tea, sugar, wood and its manufactures, and edible oils. The chief mineral products were iron and steel, wire, nails, etc., supplies for railways, telegraphs, etc., lime and cement, glassware, and earthenware. The chief textiles were cotton cloth, cotton yarn, cotton underwear, woolen goods, and silk. Among the chief items in the group of oils, fuel, and paints are coal, petroleum and its products, and prepared colors. Agricultural and mining machinery, machinery for electric and gas light, and railway cars are the chief articles in the group of machinery, instruments, etc.

In 1905 Great Britain supplied Chile with more than 45 per cent of the total imports of textiles, 43 per cent of the mineral products (largely manufactures of iron and steel), over 54 per cent of the mineral oils, fuel, etc. (chiefly coal), and more than 32 per cent of the machinery, etc. Germany supplied 36 per cent of the mineral products, 25 per cent of the textiles and textile goods, 45 per cent of the paper and paper manufactures, and over 42 per cent of the machinery, instruments, etc. The United States contributed about 18 per cent of the vegetable products, about 10 per cent of the mineral oils, fuel, etc., less than 4 per cent of the textiles and manufactures thereof, about 28 per cent of the paper and its manufactures, and

over 6 per cent of the animal products. Argentina supplied about 47 per cent of the animal products, and Peru about 30 per cent of the vegetable products (chiefly sugar). Textiles form the greatest share of imports from France, which supplied in 1905 15 per cent of the total imports of textiles, or about four times as much as came from the United States, and even from Italy the imports of textiles were greater than from the United States.

The chief imports into the United Kingdom from Chile during 1906 were nitrates, copper, wool, and cotton. Tin to the amount of $6,500,000 is credited to Chile, but this is evidently Bolivian tin exported through Chilean ports, as Chile produces only small quantities of that mineral. The chief imports into Germany from Chile during the same year were nitrates, iodine, and leather, the imports of nitrates constituting nearly 90 per cent of the total. In the imports into the United States from Chile during the fiscal year 1906 nitrate figures to the extent of 70 per cent, the remainder being made up chiefly of copper, hides and skins, and wool.

TARIFF.

The import tariff of Chile divides all imports into six classes, subject to ad valorem rates of 60, 35, 15, 5, and 25 per cent, respectively, and duty free. The 60 per cent class includes articles of fur, paper, cereals, boots and shoes, carriages and wagons, meats, articles of personal wear, fruits, biscuits, household goods, dairy products, etc. Goods subject to 35 per cent include various kinds of cloth, leather goods, ammunition, paintings, mirrors, woolen blankets, gloves, toys, books, twine, sheet iron, and other products. The 15 per cent class includes steam boilers, iron and steel chains, dynamite and other explosives, hemp and jute tissues, iron and steel bridges, domestic utensils, and structural iron and steel. The 5 per cent class includes many kinds of chemicals, railway switches, lead, copper, bronze, iron and steel pipes, various fibers, appliances for machines, wines and liquors, sugar, coffee, cigars, tobacco, etc. The duty-free list comprises metal wire, raw cotton, live animals, agricultural machinery, fire engines, iron and steel in various shapes, machinery of various kinds, iron and steel plants for railways, harrows and rakes, etc. All articles not mentioned in the tariff under the above classes are subject to a duty of 25 per cent ad valorem. A few specific rates are provided for animals. The Chilean tariff, like that of several other South American countries, contains a valuation tariff setting forth the value for almost every article mentioned in the 2,260 schedules, making the rates virtually specific.

TRADE BY COUNTRIES.

The statistics of commerce by countries, as given for sixteen years beginning with 1890, on page 75, show that in the foreign trade of Chile, as in that of Central America, the principal shares are credited to the same four industrial countries—the United Kingdom, Germany, France, and the United States. In 1905 they absorbed over 90 per cent of the exports from Chile and contributed over 80 per cent of its imports. It is characteristic of all South American countries, however, that the volume of trade with Germany and the United Kingdom considerably surpasses that with the United States or France, and that, while both in imports and exports the United Kingdom still holds the first place, Germany, its chief competitor, shows a much more rapid development. Thus, while the total exports from Chile have nearly doubled from 1891 to 1905, the exports to the United Kingdom have increased but slightly and constitute now only 40 per cent of the total exports as against 65 per cent in 1891. On the other hand, the exports to Germany have increased almost fivefold, and proportionately to the total trade from nearly 12 per cent to 27 per cent. A similar development is shown by the imports into Chile; the imports from the United Kingdom have hardly increased within the last fifteen years and constituted, in 1907, 37 per cent of the total, as against 44 per cent in 1891, while the imports from Germany have almost doubled and their proportion to the total imports has increased from 19 to 25 per cent.

The trade of Chile with the United States is subject to marked fluctuations. The exports from Chile to the United States fell off considerably during the last decade of the past century, averaging from a million and a half to two and a half million dollars annually, but have shown a tendency toward rapid growth since 1902, amounting in 1905 to over 15½ million dollars. While there has been some tendency toward increase in the imports into Chile from the United States as well, it has not been so marked.

COLOMBIA.

[Area, 465,714 square miles; population, estimated at 4,300,000.]

The latest official figures of the foreign commerce of Colombia relate to the calendar year 1898, when they amounted to $29,570,000, of which $11,083,000 were imports and $18,487,000 exports. Of the imports 44.5 per cent was drawn from the United States, and of the exports 37 per cent was sent to the United States. The official figures of the United States with reference to its trade with Colombia show that the imports from that country have grown from $3,575,253 in 1890 to $4,307,814 in 1900 and $6,308,680 in 1907, and the exports thereto from $2,585,828 in 1890 to $2,710,688 in 1900 and $3,084,718 in 1907, these being fiscal-year figures in all cases.

AREA, POPULATION, AND RESOURCES.

The Republic of Colombia, in the northwestern part of the South American continent, is bounded by the Caribbean Sea and the Republic of Panama on the north, by Venezuela and Brazil on the east, by Peru and Ecuador on the south, and by the Pacific Ocean on the west. The area is estimated officially at 465,714 square miles. No reliable statistics of the present population are obtainable, the last census having been taken in 1871, when the population was given as 2,951,323. In 1898 the population was estimated at about 4,000,000, including about 150,000 uncivilized Indians; for 1905 the estimated population is given as 4,280,000. The western part of the country is occupied largely by the Andean Cordilleras, which are divided into three main chains. The eastern part consists mainly of the vast plains or "llanos," sparsely inhabited and well adapted for cattle raising. The coasts are well indented and have a number of good harbors. The chief ports are Barranquilla and Cartagena, both on the Caribbean Sea.

The agricultural resources are abundant. The fertile valleys of the Cordilleras and the regions along the coast produce coffee, cacao, bananas, sugar, and many tropical fruits, but agriculture is in a very backward state, even in the most populous and civilized districts. The chief products exported are tobacco and coffee. Cattle raising is carried on to a considerable extent, but there is very little done toward improving the breed of the native cattle.

Colombia possesses enormous mineral resources, gold being found in almost every Department, either in alluvial deposits or in streams. At present the center of gold mining is the Department of Antioquia. The chief silver mines are in Tolima and Cauca. No reliable statistics of the mineral output of Colombia are available. The country has also deposits of iron, coal, petroleum, platinum, lead, mercury, salt, and emeralds. The salt mines are worked by the Government. The richest mines are in the remote interior, and the lack of modern transportation facilities makes it impossible to carry on mining operations on a large scale.

TRANSPORTATION.

In transportation facilities Colombia may be classed among the most backward countries of South America. It has about 400 miles of railways, consisting of short, mostly narrow-gauge, lines, running from the coast to the Magdalena River, which is navigable for about 900 miles and forms the chief waterway of the country. The roads are mere mule tracks, and the mule is the chief means of transportation, both for passengers and freight, in the interior.

COMMERCE.

Owing to the disturbed state of the country during recent years, no official reports regarding the commerce of Colombia have been published by its Government since 1898. For some years the British consuls were able to obtain some information in regard to the trade of the two main ports, namely, Barranquilla and Cartagena, which included, in the earlier years, about 80 per cent of the exports and 90 per cent of the imports; the information obtained by them was, however, extremely fragmentary—quantities only being given for some years and values only for other years—thus rendering a careful comparison impossible.

The port of Cartagena has a trade which represents about one-fourth of the total trade of Colombia. Data are available for the exports from this port in 1898 and 1906, and the total value of these exports seems to have fallen off from $5,567,000 to $3,658,000. The main exports from this port in both of these years were cattle, coffee, hides and skins, tobacco, rubber, and gold bullion; the decline in exports was most marked in tobacco—the exports in 1906 being only 4 million pounds as against 8 million pounds in 1898. There has also been some decline in the exports of cattle, as well as of hides and skins. As to imports into Cartagena, data are available only for weights in 1906 compared with 1898, and the imports of food and spices seem to have fallen off from 5 million pounds to less than a million; imports of liquors from over 2 million pounds to 660,000 pounds; a similar decline occurred in the imports of iron and steel, construction material, and textiles.

The foreign trade of Barranquilla amounts to more than one-half of the total trade of Colombia. No values are obtainable for a period later than 1900, so that a comparison is possible only for quantities of individual articles. The chief exports are similar to those of Cartagena, and here again a decline is noticed, especially in the exports of coffee, hides, and other articles, though since 1900 there has been some recovery; thus the exports of coffee in 1900 were only 87,000 bags against over 300,000 bags in 1898 and 250,000 bags in 1899, but by 1904 the trade had recovered and the exports of coffee amounted to 574,000 bags. Only 115,000 hides were exported in 1900 as against 180,000 in 1899; no data are available for 1901 and 1902, but in 1903 the number increased to 283,000. Exports of ivory nuts in 1899 amounted to 5,000 bags, and in 1900 to less than a thousand bags. The value of gold and silver exported in 1898 was $2,800,000; in 1899, $2,200,000, and in 1900 the trade had greatly declined, amounting to less than $700,000. For imports into Barranquilla only data of quantity are available, and these are all stated in terms of weight. Here again a decline in the volume of imports is noticeable in regard to a number of groups of articles, mainly iron and steel, wines and liquors, and woolen goods; there has also been a decline in the imports of leather, soaps and perfumery, and other articles.

This information being so meager it is necessary in order to form some conception of the foreign trade of Colombia to have recourse to the reports of other countries on their trade with Colombia for recent years. In Table 62 are given the imports from Colombia into the five countries with which it mainly trades, namely, the United States, United Kingdom, France, Germany, and Spain, and the exports to Colombia from the same five countries for the years 1890, 1895, 1900, and 1905. By adding the figures of all the countries specified with regard to their trade with Colombia, a total may be obtained which must not be understood as representing with any accuracy the total trade of Colombia, but may be considered as at least indicative of the dimensions of that trade; moreover a total obtained in that way is valuable for purposes of comparing figures for different time periods. It appears from Table 62 that the total volume of the trade greatly decreased toward the end of the nineteenth century, for the total trade in 1900 with the five countries specified was 19½ million dollars, or 40 per cent less than in 1890. The effect was especially marked on the exports from the countries mentioned to Colombia, indicating a decline in the purchasing power of the people because of the disturbances referred to. Thus the exports from those countries to Colombia, which had been more than 21 million dollars in 1890, were only 14 million dollars in 1895 and less than 8 million dollars in 1900, a reduction of more than 60 per cent within ten years. Within the last few years a considerable improvement is noticeable, the imports having increased by almost 2 million dollars and the exports by almost 5 million dollars, though the volume of trade in 1905 is still below that of 1895. This falling off occurred especially in the trade with France, the United Kingdom, and even Germany. On the other hand, the trade with the United States, both in imports and exports, has been growing in the face of this general decline; for the imports from Colombia into the United States have increased from $3,575,000 in 1890 to $3,714,000 in 1895, to $4,308,000 in 1900, and $6,412,000 in 1905, while the exports from the United States to Colombia have increased from $2,586,000 in 1890 to $2,596,000 in 1895, $2,711,000 in 1900, and $3,583,000 in 1905, but declined slightly in 1906 and 1907, the decline being due chiefly to the fact that a section of Colombia became an independent country (Panama), and its commerce no longer figures as a part of that of Colombia.

TABLE 62.—COMMERCE WITH COLOMBIA OF FIVE SPECIFIED COUNTRIES, 1890, 1895, 1900, AND 1905.

COUNTRIES.	1890	1895	1900	1905
Imports from Colombia into—	*Dollars.*	*Dollars.*	*Dollars.*	*Dollars.*
United States	3,575,253	3,713,682	4,307,814	6,411,793

Spain	271,510	299,333	279,597	125,379
Total for 5 countries	11,507,001	14,011,618	11,821,101	13,790,437
Exports to Colombia from—				
United States	2,585,828	2,596,302	2,710,688	3,582,789
United Kingdom	5,886,606	6,141,051	1,774,740	2,877,503
France	10,943,100	3,821,400	2,437,783	3,330,794
Germany	1,133,118	1,170,722	549,066	1,789,998
Spain	605,250	512,978	354,325	999,096
Total for 5 countries	21,153,902	14,242,453	7,826,602	12,580,180

The total value of the trade of the five countries with Colombia for a long series of years is given on page 116. On pages 146 and 147 may be found a detailed statement in regard to the trade of the United States with Colombia by articles, and on pages 124 and 125 a similar statement for the United Kingdom, France, and Germany. It appears from these statements that the imports into the United States from Colombia reached their highest point in 1906, when they amounted to over 7 million dollars. A slight decline in 1907 reduced these imports to $6,309,000. In the fiscal year 1906 the chief imports into the United States from Colombia were as follows: Coffee, $4,102,000; hides and skins, $1,071,000; bananas, $477,000; india rubber, $346,000; cocoanuts, $372,000. Coffee alone, therefore, constituted almost 60 per cent of the imports, and the quantity of coffee imported almost equaled 50 million pounds. That, however, was not the largest import of coffee on record, for in 1904 the imports of coffee equaled 73½ million pounds. The imports into the United Kingdom from Colombia in 1906 were only $1,349,700, against $3,260,700 in 1904. The imports into the United Kingdom from Colombia also consisted mainly of coffee, which in 1904 amounted to 129,689 hundredweights and in 1906 only to 33,210 hundredweights. The other articles imported were cacao, raw hides, and india rubber. Germany bought from Colombia coffee mainly, of which the imports in 1905 amounted to 11,631,249 pounds, valued at $1,255,700, or more than half of the total imports, other articles of importance being hides and skins and india rubber, as in the case of the United States and the United Kingdom, and tobacco leaf. The same articles predominated in the imports of France from Colombia. The imports of Colombian coffee into France amounted in 1905 to 7,207,719 pounds, valued at $656,200, or 60 per cent of the total imports. Not only the United Kingdom

and France, but even the United States have been importing considerable quantities of cotton from Colombia during recent years. The statements of all these countries in regard to their imports from Colombia clearly indicate that this South American Republic has a large surplus production of agricultural and forest products, mainly coffee, cacao, hides, fruits, small but growing quantities of cotton, and india rubber, and that during years of political tranquillity the trade in this surplus is quite an active one.

The exports from the United States to Colombia reached their highest point in 1904, when they amounted to $4,661,000; they fell off to $3,491,000 in 1906 and $3,085,000 in 1907. In the fiscal year 1906 the exports from the United States to Colombia were made up largely as follows: Cotton cloths, nearly 13 million yards, valued at $654,000; manufactures of iron and steel, $624,000; wheat flour, nearly 102,000 barrels, valued at $519,000; lard, 3,775,000 pounds, valued at $313,000; leather manufactures, $135,000, and illuminating oil, nearly 1 million gallons, valued at $105,000. The increase during recent years has been greatest in the exports of lard, while the exports of cotton cloths during recent years have decreased from over 30 million yards in 1903 to less than 13 millions in 1906. In the case of the United Kingdom, considerably more than one-half of the exports in 1906 consisted of cotton cloths, of which almost 53 million yards were exported, worth $2,678,000. The bulk of the remainder consisted also of various textiles, such as linen and jute piece goods, bags and sacks, woolen manufactures, and ready-made clothing, in addition to which Great Britain exports to Colombia considerable quantities of iron manufactures. The German exports to Colombia have recovered lately from the decline indicated above. In 1902 they amounted to less than 1 million dollars. They consisted mainly of rice, sugar, some textiles, mainly woolen, and manufactured articles such as leather, stone and china ware, books, jewelry, etc. France exports to Colombia chemicals, cotton and woolen cloths, ready-made clothing, wines, hardware, toys, etc.

A recent British consular report contains a fairly complete statement of the weight and value of both the imports and exports for the entire country by ports. It is seen that during 1906 the port of Barranquilla received over one-half of the total imports and shipped almost three-quarters of the total exports, the next port in importance, Cartagena, being credited with over one quarter of the total imports and about 18 per cent of the total exports.

TABLE 62A.—IMPORTS INTO AND EXPORTS FROM COLOMBIA, 1906, BY PORTS.[a]

PORTS.	IMPORTS.		EXPORTS.

[d] Figures for November and December not available.

TARIFF.

The import tariff of Colombia divides the imports into 16 classes, with specific rates of duty ranging from 1 cent per kilo upward to $1.50, and in addition to this a surtax of 70 per cent. In order to further the industrial development of the country a number of articles are exempted from the surtax, including leather, yarn, coloring matter for tissues, wool yarn, wool, cotton, and jute threads, etc. There are also numerous products on which a reduced surtax is levied. As an offset for this reduction specially increased duties are charged on tobacco, alcoholic beverages, sugar, and salt. Rebates of from 25 to 50 per cent on the regular duties are allowed on imports into certain ports of the Republic.

CUBA.

[Area, 44,000 square miles; population in 1907, 2,056,000.]

COMMERCE.

The total commerce of Cuba in 1906 (calendar year) was $208,450,000, of which $99,540,000 were imports and $108,910,000 exports. Of the imports, 47.8 per cent was drawn from the United States; of the exports, 85.1 per cent was sent to the United States. The official figures of the United States with reference to its trade with Cuba show that the imports from that country fell from $53,801,591 in 1890 to $31,371,704 in 1900, and increased to $97,441,690 in 1907, and the exports thereto have grown from $13,084,415 in 1890 to $26,513,400 in 1900 and $49,305,274 in 1907, these being fiscal-year figures in all cases.

The steady growth of the commerce of Cuba since the cessation of war shows clearly the revival in the economic life of the country. The imports of merchandise, which amounted to $76,572,000 in the calendar year 1894, increased to $98,020,000 in the calendar year 1906. The share of the United States in the import trade of Cuba increased from 38.7 per cent in 1894 to 47.8 per cent in 1906. The exports from Cuba show a somewhat smaller increase, being $99,456,000 in 1894 and $108,910,000 in 1906. The share of the United States in the export trade of Cuba for the two years named was 85.5 and 85.1 per cent, respectively. The share of the United Kingdom in the commerce of Cuba during the calendar year 1905 was 13.1 per cent of the imports and 5.1 per cent of the exports. Detailed statements of the trade of Cuba by countries and by articles are given in the statistical appendix and may be found on pages 75, 76, 93, and 94.

An analysis of the commerce of Cuba for the calendar year 1905 brings out the following facts: Of the total imports of manufactures of cotton, $8,674,623, the United Kingdom contributed 42.6 per cent, Spain 21.5 per cent, and the United States 17 per cent; thus, while the share of the United States shows an increase from 7.2 per cent in 1903 to 10.4 per cent in 1904 and 17 per cent in 1905, it is still less than one-half of that of the United Kingdom. Of the imports of manufactures of iron and steel (not including machinery), $5,115,302, the share of the United States was 53.8 per cent, that of the United Kingdom 27.1 per cent, and that of Germany 9.1 per cent. In 1904 the United States contributed 48.1 per cent of the imports of iron and steel manufactures, in 1903 43.3 per cent, and in 1901 69.4 per cent. Of imports of machinery not elsewhere specified, $6,884,588, the share of the United States was 67.6 per cent and that of the United Kingdom 12.2 per cent. While the absolute value of the imports from the United States of machinery not elsewhere specified shows an increase from $1,435,500 in 1900 to $4,653,432 in 1905, the relative importance of the above-named imports from the United States has fallen from 93.2 to 67.6 per cent. During the same period the imports from the United Kingdom of machinery not elsewhere specified have increased from 2 to 12.2 per cent, notwithstanding the 20 per cent differential in import duty in favor of imports from the United States. Of the total imports of machinery for sugar mills and distilleries, $3,401,764, the United States is credited with 53.3 per cent and the United Kingdom with 16.5 per cent, as compared with 91.6 and 2.8 per cent, respectively, in 1900. Of the imports of boots and shoes, $3,010,936, the United States contributed 57.6, against 19.1 per cent in 1900; and Spain 42.4, against 79.8 per cent in 1900. In view of this rapid substitution of American for Spanish footgear, it

is worth noting that of men's boots and shoes 60 per cent is still derived from Spain and 40 per cent from the United States, but of women's shoes only 27.7 is derived from Spain and 72.3 per cent from the United States. Thus, in the supply of women's shoes, the American shoe manufacturer has been much more successful over his competitor than in that of men's shoes.

The share of the United States in the foodstuffs imported into Cuba during the calendar year 1905 was 99.4 per cent of the flour, 99.7 per cent of the lard, 94.5 per cent of the corn, 99 per cent of the beef other than jerked, but none of the latter variety; all of the mutton, 96.6 per cent of the pork, 66.2 per cent of the canned meats, and 84.7 per cent of the condensed milk, but only 16.4 per cent of the butter and 5 per cent of the cheese. Spain contributed during the same year 95.4 per cent of the wine and 91.6 per cent of the olive oil.

Of the exports of Cuba the United States takes by far the largest share. Of the total exports of raw sugar during the calendar year 1905, $71,249,056, the United States took $71,181,765; of the total exports of leaf tobacco, $14,043,506, the United States took $12,025,585; and of the total exports of cigars, $13,875,183, the United States took $4,115,587, Great Britain $5,308,659, Germany $1,634,374, and France $531,107. Practically the entire exports of fruit and over 50 per cent of the export of cacao went to the United States. Thus it is seen that the whole of the chief product of Cuba, sugar, and a considerable part of its products next in importance are exported to the United States. During the fiscal year 1907 the United States imported from Cuba sugar to the value of $70,637,288, or 70 per cent of the sugar brought into the United States from foreign countries, leaf tobacco to the amount of $13,527,863, and cigars and cigarettes to the amount of $3,889,520. The export and import trade of the chief ports of Cuba during the fiscal year 1905 is given in the following table:

TABLE 63.—FOREIGN TRADE OF PRINCIPAL PORTS OF CUBA IN 1905.

PORTS.	Exports.	Imports.	PORTS.	Exports.	Imports.
	Dollars.	*Dollars.*		*Dollars.*	*Dollars.*
Habana	39,842,197	65,183,479	Matanzas	8,733,560	3,014,105
Cienfuegos	12,479,097	6,888,734	Santiago	3,385,101	7,375,900
Cardenas	9,625,574	2,615,885			

The shipping of all the Cuban ports during the calendar year 1905 is shown by the following table:

TABLE 64.—TONNAGE MOVEMENT IN CUBAN PORTS IN 1905.

TRADE.	STEAMERS.		SAILING VESSELS.		TOTAL.	
	Number.	Net tonnage.	Number.	Net tonnage.	Number.	Net tonnage.

Cleared	7,797	7,688,278	10,401	645,287	18,148	8,333,619

TRANSPORTATION.

The total length of the railway lines of Cuba open for general traffic at the end of the fiscal year 1904 was 1,589.2 miles, as compared with 1,160.7 miles at the end of the fiscal year 1902. The most important and longest line is the one belonging to the Cuba Company, having a total length of 344.2 miles. The trunk line of the system under the control of the Cuba Company runs from Habana to Santiago, thereby connecting the eastern end of the island with the economic center. The Cuba Company, an American concern under the direction of Sir William Van Horne, has for its main object the development of the eastern part of the island, and has acquired large tracts of undeveloped land along the railway line. Next in length and importance is the United Railways of Habana, owned by an English company, with a total length of over 250 miles. Its principal line runs from Regla, a town just across from Habana, to Jovellanos, an inland town in the Province of Matanzas, 88 miles from Habana. It also operates a number of short lines around Habana. Besides the public railway lines there are short private lines used for the transportation of freight from the plantations and mills to the stations along the public railways. A bill was promulgated September 5, 1905, providing for the subvention of the Cuba Railroad Company by the Cuban Government by the advance of a credit of $798,450, which is to be repaid in installments by the company within ten years.

SUGAR.

The sugar of Cuba is entirely the product of the sugar-cane plant, and is of a uniformly superior quality. The cane is not indigenous to Cuba, but was introduced soon after the discovery of the island. The industry has received its main development since about 1830, after which year the annual production of sugar in the island has grown from about 100,000 to about 1,000,000 tons. Sugar is raised pretty generally all over the island, especially in the four central provinces—Habana, Matanzas, Santa Clara, and Puerto Principe. The plant flourishes luxuriantly as a rule with comparatively little care or encouragement, and replanting becomes necessary only once every ten or fifteen years, so that the crop is raised easily and cheaply; but the preparation for market is expensive in comparison.

The cost of raising a pound of sugar in Cuba has been estimated at about 1 cent, and the cost of manufacturing and transporting it to seaboard under present conditions 1 cent more, or about 2 cents a pound. The process of production involves purchase or lease of land; hire of laborers and their housing and sustenance; clearing away and breaking up of the fields; purchase of the original cane plants and their renewal from time to time; planting, cultivating, weeding, and harvesting, and the procurement of agricultural tools, implements, and machines for these undertakings; erection of buildings for storing and sheltering the stalks; construction of roads or private railways for transporting the same from the fields or farms to the mills; vehicles, cars, animals, or locomotives for use in transportation; building of mills and their equipment with the various kinds of necessary sugar machinery; repairs, salaries of mill operatives, loading and freight to seaboard, insurance, and interest on investment. In the old times the cost was much greater. The new era of improvement has only just begun, and it is the opinion of all the best informed observers that with the additional improvements which may be certainly expected soon to follow the cost of production will be further reduced. Improved roads and transportation facilities will probably also reduce the cost of transportation.

Although nearly the whole island is well suited for the successful raising of sugar cane of the best quality, one of the largest crops ever produced on the island—that of 1894—was raised on plantations covering about 2,000,000 acres, or only about one-fourteenth of the total acreage of Cuba. Owing to the devastation wrought during the war of liberation many plantations were abandoned or greatly crippled, and the recovery from these ravages is by no means yet complete. It is estimated that about 5,000,000 acres might quickly and easily be turned into first-class sugar plantations in addition to the plantations already existing and in operation.

The total number of plantations and farms of all sorts in Cuba prior to the late war was 90,960, but in 1899, just after the war, the number was only 60,711. Since 1899 the number has materially increased.

Improvements that have been gradually introduced in the process of sugar production in Cuba include steam power in the field and in the mills, labor-saving machines of various kinds, improved furnaces, clarifiers, grinding machines, defiberators, defecators,

vacuum pans, centrifugal separators, and other modern sugar machinery, cane carriers and railway tracks. through the fields for moving the crops to the mills, chemical laboratories, cane loaders and unloaders, electric-light plants in the mills, and a large variety of novel improvements, tools, fertilizers, etc.

The best estimates unite in stating the total area of developed land, including cities, towns, villages, farms, plantations, and pasturages, at about 14,000,000 acres, or about one-half of the island.

The relative importance of Cuba as a sugar-producing country may be seen from the following table:

TABLE 65.—WORLD'S SUGAR PRODUCTION AND SHARE SUPPLIED BY CUBA, 1902–1907.[a]

TOBACCO.

The tobacco of Cuba has the reputation of being the best in the world. The very superior grade is produced only in Pinar del Rio, the most westerly province, and in only one section of that province.

Tobacco of superior quality is grown throughout Cuba, but Pinar del Rio contains nearly three-fourths of the total tobacco acreage of the island, and Habana Province nearly one-fourth. The plant is indigenous, and tobacco became an article of export as early as the sixteenth century. Spain imposed very high taxes and tariffs upon it and derived from it much revenue. In 1894 the total product was 62,000,000 pounds. Since the war the amount raised has been somewhat less than this.

Cuba's tobacco production ranks next to sugar in importance. The tillage of the tobacco plant absorbs about 10 per cent of the cultivated area of the island, and in raising the crop and in the manufacture of cigars and cigarettes from the leaf nearly 100,000 persons are employed. The methods pursued in the Cuban tobacco fields are practically the same as those pursued in North Carolina or in Connecticut, except that in Cuba the planting is done almost entirely by hand. The Cuban season of growth is from September to January. The cutting and curing processes follow and last into February. The fermenting process comes next, and after that the leaves are assorted and baled and sent to the factory or the market. Much of the tobacco raised in Cuba is manufactured into cigars and cigarettes, and of this manufacture about one-fifth is reserved for home consumption and four-fifths is exported, together with the remainder of the leaf unmanufactured. In 1905, 37,729,311 pounds of leaf tobacco were exported, besides 225,181,266 cigars and 11,930,130 packages of cigarettes. The value of the unmanufactured export was $14,043,506 and of the manufactured export $14,271,565.

COFFEE.

The soil and climate of Cuba are admirably suited for the production of large crops of the best coffee. This fact is proved by historical records. While the Cubans during recent years have not raised coffee enough for their own consumption, it was for about thirty years in the first part of the nineteenth century one of their leading industries, and the amount annually exported averaged about 15,000,000 pounds.

Its decline was due to several causes, among which were the competition of the East Indies and South America, a succession of bad crops, and the increasing attractiveness of sugar-cane culture, in view of the great demand for Cuban sugar in the early part of the past century. At that period Cuba had almost a monopoly of the sugar market, and a great many planters changed from coffee to sugar culture in order to make more money. There were 1,600 coffee plantations in Cuba in 1846, but less than 200 in 1903.

TARIFF.

Under Spanish domination Cuba had an exceedingly high tariff, which was virtually prohibitive. At the same time Spanish products were admitted free of duty. In 1892 the Spanish Government granted considerable reductions of duty on imports from the United States in return for the free admission of Cuban sugar into the United States.

After the outbreak of the last revolution the Spanish Government found it necessary to revise the tariff. The new tariff was proclaimed August 8, 1897, and went into effect ten days later. It reduced the duties to a very large extent, making the new rates in several cases less than half the old rates. It also abolished the old custom of admitting Spanish products free. It provided, however, for "differential duties," which were to be levied in addition to the regular rates, called "fiscal duties," upon imports from foreign countries. The United States no longer enjoyed the special reductions granted in 1892.

Upon taking possession of the island in 1898, President McKinley, exercising his authority as Commander in Chief of the Army and Navy, proclaimed a new tariff for Cuba, which was practically a repetition of the Spanish tariff in force before the occupation of the island by the United States, with several rates, especially on food products, considerably reduced. On March 31, 1900, President McKinley proclaimed a new tariff, in which further modifications were made, some of the duties on food products being reduced, while others—as, for example, those on live animals—were increased.

On assuming control of the Republic in May, 1902, the Cuban Government decided to continue the tariff of 1900 in force, making only slight modifications in the customs treatment of imports from time to time. In December, 1903, the new reciprocity convention between the United States and Cuba went into effect. By the terms of this agreement certain reductions of duty were granted by the two nations to each other, amounting to 20 per cent on Cuban products entering the United States, and 20, 25, 30, and 40 per cent on various articles from the United States entering Cuba. In January, 1904, the Cuban Congress authorized the Government to increase certain rates by from 15 to 30 per cent. These changes, which affect practically all of the products covered in the convention between the United States and Cuba, were promulgated by President Palma, of Cuba, on February 1, 1904. The increases are at the rates of 15, 20, 25, and 30 per cent, but the differential in favor of United States products is still retained, since products of foreign countries have to pay still higher rates, equal to the difference provided for in the treaty. Further details as to the Cuban tariff will be found in the "Customs Tariff of the Republic of Cuba," published by the Bureau of Statistics of the Department of Commerce and Labor in May, 1905.

[Commercial and industrial conditions in Cuba are discussed at greater length in a monograph entitled "Commercial Cuba," issued by the Bureau of Statistics of the Department of Commerce and Labor in 1905, being part of the May, 1905, Summary of Commerce and Finance.

ECUADOR.

[Area, 116,000 square miles; population, estimated at 1,400,000.]

The total commerce of Ecuador in 1906, the latest year for which complete statistics are available, was $18,968,000, of which $8,279,000 were imports and $10,689,000 exports. Of the imports 27.4 per cent was drawn from the United States, and of the exports 30.9 per cent was sent to the United States. The official figures of the United States with reference to its trade with Ecuador show that the imports from that country have grown from $535,060 in 1890 to $1,524,378 in 1900 and $3,059,573 in 1907, and the exports thereto from $715,208 in 1890 to $1,216,008 in 1900 and $1,726,289 in 1907, these being fiscal-year figures in all cases.

COMMERCE.

The foreign commerce of Ecuador for the years 1900 to 1906 is given in the following table:

TABLE 67.—COMMERCE OF ECUADOR, 1900–1906, BY COUNTRIES.[a]

[a] Compiled from the reports of the German consul in Das Deutsche Handelsarchiv, Part II, for 1902, 1903, 1905, and 1906.
[b] As no report was found for 1903, the imports were obtained from the British Consular Reports and the exports from the Statesman's Yearbook, 1905.
[c] No data available. Included with "All other."

The imports into Ecuador in 1906, the latest year for which statistics are available, exceeded 8¼ million dollars, while the exports are growing at a fairly rapid rate. In 1906 the United Kingdom contributed about 33 per cent of the imports, the United States 27 per cent, Germany 18 per cent, France 7½ per cent, and all the other countries only 14 per cent. While the same four countries absorb the greater part of the exports, the order of importance is different. France is the most important purchaser of products of Ecuador, taking in 1906 a little over 31 per cent, the United States slightly less than 31 per cent, and Germany less than one-sixth, leaving less than one-fourth to all the other countries.

This geographic distribution of the exports and imports of Ecuador may be better understood from the nature of the articles entering its commerce. Of its exports, as shown in Table 68, almost 60 per cent consists of cacao, of which France is the most important consumer. Palm nuts, rubber, and coffee are other important agricultural exports, and in 1905 these four items alone amounted to 82 per cent of the total exports. The remainder consists of some hides, auriferous minerals, and straw hats.

The imports into Ecuador, on the other hand, are much more varied, consisting of comparatively small quantities of a variety of articles of ready consumption needed in a country with scarcely any manufacturing industries. In Table 69 are shown the imports into Ecuador in the years 1900, 1902, 1904, and 1905, the only recent years for which it was possible to obtain information. Textiles are seen to constitute about 30 per cent of these imports, and foodstuffs, iron ware, and ready-made clothing are the items next in importance; all these are products in the manufacture of which the United States and the United Kingdom are leading.

[a] Compiled from reports of the German consul in Das Deutsche Handelsarchiv. No report was made for 1903 and no data given for imports by articles in the report for 1901.
[b] No data available.

The commerce with the United States has grown considerably during the period 1890 to 1907. The imports into the United States from Ecuador have in the last seventeen years increased almost 400 per cent, from $535,060 to $3,059,573. The exports from the United States to Ecuador in the same period show an increase of about 140 per cent, from $715,208 to $1,726,289. The imports into the United States from Ecuador during 1906 consisted of cacao, which formed over 42 per cent of the total; rubber, over 23 per cent; vegetable ivory and hides and skins, over 10 per cent each; straw hats, etc., about 10 per cent, and all other articles only 3 per cent. Our imports of cacao from Ecuador have increased during the period 1890 to 1906 from $150,156 to $1,108,219. The exports from the United States to Ecuador in 1906 were chiefly made up as follows: Wheat flour and lard, about 28 per cent each; iron and steel manufactures, about 34 per cent; and manufactures of cotton, about 5 per cent. Of the imports from Ecuador to the United States in 1906 over three-fourths were admitted free of duty.

TARIFF.

The import tariff of Ecuador provides for levying the following duties: (1) Import duties; (2) a surtax of 100 per cent; (3) warehouse tax and surtax of 100 per cent; (4) transit tax and surtax of 100 per cent; (5) wharfage charges; (6) consumption taxes on liquors; (7) special dues; (8) porterage dues (longshoremen's charges); (9) consular fees.

The import duties are divided into 38 classes. The importation of commodities included in the first class is entirely prohibited. Articles mentioned in the second class are admitted free of duty and include among other products certain chemicals, live animals, all kinds of instruments and apparatus, machines, agricultural machinery, almost everything used in construction work from bricks to iron and steel beams and doors, windows, staircases, etc., iron and steel bridges, rails, etc. The goods mentioned in the classes 3 to 38 are subject to duties ranging from 1 centavo to 60 sucres per kilo (from one-fourth cent to about $14 per pound). Practically all the rates are specific.

GUIANAS (BRITISH, DUTCH, AND FRENCH).

The area of the three sections into which the Guianas are divided is estimated at about 167,000 square miles, and the population at about 400,000. British Guiana covers more than half of the total area, and contains about three-fourths of the entire population. The commerce of these colonies during the latest year for which information is available, was as follows:

TABLE 70.—COMMERCE OF BRITISH, FRENCH, AND DUTCH GUIANAS IN THE LATEST AVAILABLE YEAR.

SECTIONS.	Year ended—	Exports.	Imports.
		Dollars.	*Dollars.*
British Guiana	Mar., 1906	9,324,000	7,709,000
Surinam (Dutch Guiana)	Dec., 1905	1,781,000	2,635,000
French Guiana	Dec., 1904	2,022,000	2,257,000

It is the common characteristic of the trade of these three colonies that the greater share of their trade is with the mother country, as will be shown by the detailed figures referring to each colony. The only exception is found in the exports of Dutch Guiana, of which a greater quantity goes to the United States than to the Netherlands.

GUIANA, BRITISH.

[Area, 90,277 square miles; estimated population in 1904, 295,122.]

The total commerce of British Guiana in the year ended March, 1906, the latest year for which statistics are available, was $17,033,000, of which $7,709,000 were imports and $9,324,000 exports. Of the imports 29.7 per cent was from the United States, and of the exports 17.1 per cent was sent to the United States. The official figures of the United States with reference to its trade with British Guiana show that the imports from that country have decreased from $4,326,975 in 1890 to $3,795,358 in 1900 and $1,213,813 in 1907, and the exports thereto from $2,106,345 in 1890 to $1,915,192 in 1900 and $1,847,147 in 1907, these being fiscal-year figures in all cases.

This colony, with an area exceeding that of Great Britain, has a population of less than 300,000. Its economic development took place under conditions of negro slavery, the slaves being introduced from the West Indies, and was based almost exclusively on the production of sugar on large plantations. Since the abolition of slavery, contract labor, mainly of Indian coolies, has enabled the large plantation owners to continue the cultivation of sugar on a profitable basis, so that the sugar industry in British Guiana does not show the same tendency toward deterioration as in most of the West India islands. About half of all the cultivated land in the colony is under sugar cane, and because of the fertility of the soil, improved processes of production, and the excellent quality of the sugar the planters are able to hold their own against the competition of European beet sugar, and the so-called Demerara sugars command very high prices in the English markets.

COMMERCE.

The exports of sugar from British Guiana oscillate between 200 and 300 million pounds and usually represent about nine-tenths of the exports. The value of the total exports from British Guiana fluctuates between 8 and 11 million dollars and usually depends on the quantity of sugar exported as much as on the price in the world market. Other important articles of export are by-products of the sugar industry, such as molasses and rum, and in 1905 these three articles represented more than 90 per cent of the total exports of merchandise. In addition to this, exports of gold dust and bullion have been developing within the last fifteen years, and while in the beginning they represented the product of very primitive methods of washing the gold dust found along the rivers, at present scientific methods of gold mining are gradually being introduced.

While the population does not show any tendency to increase, the imports into Guiana show a decided tendency to decline. The highest mark which they reached during the last fifteen years was in the fiscal year 1894, when the merchandise imported had a value of $9,347,000, while during the eight years 1896 to 1903 they were below 7 million dollars and in 1905 $7,709,000. The imports consist mainly of foodstuffs and other articles of consumption, namely, large quantities of flour and rice used by the Indian coolies, dried fish, textiles, and spirituous liquors. Another important class of imports, however, is made up of materials needed in the sugar industry, such as coal, fertilizers, and machinery. In 1905 the imports of machinery amounted to over $300,000, those of coal to $118,000, and fertilizers to $620,000, the imports for that particular year being rather below the normal.

The trade of British Guiana is mainly with the United Kingdom, the United States, and Canada. The imports from the United Kingdom are over one-half, and the exports to the United Kingdom about 40 per cent, of the total. The United States supplies a little less than one-third of the imports and takes from one-third to one-fourth of the exports. Canada figures largely in the exports from British Guiana, of which it takes a share about equal to that of the United States, while the imports from Canada are only 3 to 4 per cent of the total. The sugar exported from British Guiana goes mainly to the United States and to Canada, which took about 40 per cent each, while most of the remainder goes to the United Kingdom. Of the rum, over four-fifths goes to the United Kingdom, which also takes practically all the gold bullion exported. To the markets of British Guiana the United States supplies almost all the wheat flour, most of the meat products, and most of the grain, while the United Kingdom ships about 90 per cent of the textiles, about four-fifths of the machinery, almost all the fertilizers, and most of the manufactured articles of iron, india rubber, hats, haberdashery and millinery, bags and sacks, malt liquors, drugs, etc., and most of the coal. The imports from the British East Indies consist of large consignments of rice, for the use of the coolies.

GUIANA, DUTCH.

[Area, 46,060 square miles; population in 1905, 75,465.]

The total commerce of Dutch Guiana in 1905, the latest year for which statistics are available, was $4,416,000, of which $2,635,000 were imports and $1,781,000 exports. Of the imports, 20.9 per cent was from the United States, and of the exports 38.9 per cent was sent to the United States. The official figures of the United States with reference to its trade with Dutch Guiana show that the imports from that country increased from $574,114 in 1890 to $1,230,412 in 1900 and fell off to $690,911 in 1907, and the exports thereto increased from $279,519 in 1890 to $493,985 in 1900 and $519,504 in 1907, these being fiscal-year figures in all cases.

COMMERCE.

In view of the small population, being an average of only about 1½ persons per square mile, a very small part of the large area of Dutch Guiana is economically exploited. Agriculture is the main industry of the population, of which 26,000, or more than 60 per cent of the people economically employed, are engaged in the fields, while the gold-mining industry, evidently on the decline, employs about 2,600 people, as against 3,400 in 1900. The majority of the population consists of descendants of former slaves, slavery having been abolished in 1863. Under slavery, sugar and coffee plantations were the basis of the economic prosperity of this colony. After emancipation many of its large plantations were broken up, and the population began to grow only within recent years, mainly by means of the importation of Indian coolies. The exports still consist mainly of agricultural products and small quantities of gold. The total value of the exports was over 2 million dollars annually during the years 1897 to 1901, and since then it has oscillated between $1,500,000 and $1,800,000. The exports of sugar vary between 15 and 25 million pounds. In 1905 they amounted to 18½ million pounds, valued at $586,000. The exports of cacao represent in some years a higher value. In 1899 they amounted to 8,500,000 pounds, worth $1,141,000, but since then they have been rapidly falling off, declining to 7 million pounds in 1901, less than 2 million pounds in 1904, though for 1905 they increased again to 3,700,000 pounds. The main reason of the decline is probably to be found in the Krullote (witchbroom) plague, and the increased exports of 1905 indicate that the efforts to combat that plague have been at least partially successful. The exports of coffee are small, amounting in 1905 to 232,000 pounds, valued at $19,000. The exports of gold in 1905 were $564,000, the highest on record during the decade. The value of the imports as a rule is higher than that of the exports, being from 2 to 3 million dollars annually and within recent years nearer the latter figure. They consist mainly of breadstuffs, such as flour, rice, of which about 10 million pounds are imported annually for the consumption of the coolies, textiles, such as cotton manufactures and ready-made clothing, meat products, and alcoholic liquors. The imports of machinery are considerable in view of the small population, amounting to $98,000 in 1905, and as much as $170,000 and over in earlier years. The trade of this colony is mainly with the mother country and the United States. About half of the imports come from the Netherlands and one-fifth to one-fourth from the United States. In 1905 the proportion was as follows: From the Netherlands, 58 per cent; from the United States, 21 per cent, and from all other countries 21 per cent. This proportion is practically constant, having scarcely changed since 1901, when it was 48 per cent, 20 per cent, and 32 per cent. Of the exports, 41.7 per cent went to the Netherlands, 38.9 per cent to the United States, and 19.4 per cent to all other countries. The imports from Dutch Guiana to the United States consist largely of cacao and sugar, and the chief exports from the United States are breadstuffs and provisions.

Detailed statements of the foreign trade of this colony will be found on pages 68, 69, 76, 96, and 97.

GUIANA, FRENCH.

[Area, 30,500 square miles; population in 1901, 32,908.]

The total commerce of French Guiana in 1904, the latest year for which statistics are available, was $4,279,000, of which $2,257,000 were imports and $2,022,000 exports. Of the imports 8.9 per cent was drawn from the United States, and of the exports only 1 per cent was sent to the United States. The official figures of the United States with reference to its trade with French Guiana show that the imports from that country were $17,647 in 1890, $37,564 in 1900, and $33,922 in 1907, and the exports thereto $160,933 in 1890, $189,910 in 1900, and $294,976 in 1907, these being fiscal-year figures in all cases.

COMMERCE.

Within the last decade, the foreign trade of French Guiana has shown a slight tendency to increase. The exports have fluctuated between $1,200,000 and $2,400,000, while the imports were usually several hundred thousand dollars larger. This is explained by the fact that French Guiana serves as a penal colony, and therefore contains a comparatively large unproductive population. While the natural conditions of climate and soil would permit of some agricultural development, very little has ever been attempted in that direction, and one is therefore not surprised to find that from 90 to 95 per cent of the exports consist of auriferous minerals, and that the exports of other merchandise are almost too small to deserve any mention. In 1904 exports of phosphates for fertilizing purposes amounted to $41,000 and shipments of rose essence amounted to $37,000. About 95 per cent of the gold was shipped to France and the rest to Switzerland. Most of the fertilizers went to the United States. The imports consisted mainly of food products, textiles, and other articles of domestic consumption, as is found to be the case in all minor Latin-American countries. In 1904 the main items of imports were as follows: Flour, $186,000; spirits, wines, and malt liquors together, $324,000; cattle, $103,000; salt pork, $89,000; and salt beef, $48,000. Other food products imported were vegetables, $81,000, and sugar, $59,000. The imports of cotton manufactures amounted to $152,000, while the bulk of the remaining imports consisted of such articles as candles, chinaware, glassware, jewelry, leather manufactures, oil, paper manufactures, soap, etc. Almost 70 per cent of these imports came from France, which enjoys the privilege of free trade with its colony. Next in importance in supplying the slight demand were the British colonies, probably the West Indies, and the United States, the latter supplying about $200,000 worth, or less than 10 per cent of the total. Even of the wheat flour imported, only one-fourth came from the United States and three-fourths from France, which is explained by the fact that France pays a drawback duty on flour ground in France from imported wheat. The main articles in which the United States competed to some degree successfully with France were salt pork and beef, lard and butter, and cotton-seed oil, of which latter the United States supplied two-thirds of the total imported. Of petroleum, the United States sent only $16,000 worth, as against $33,000 from France, probably of Russian origin. It is noteworthy that the United States sent practically no textiles, no leather manufactures, very little iron manufactures—in brief, very small quantities of manufactures in general.

Detailed information regarding the trade of French Guiana are given in the statistical appendix, and will be found on pages 69, 77, 97, and 98.

HAITI.

[Area, 10,204 square miles; population estimated at 1,347,000.]

Haiti has no official record of its foreign commerce. An estimate for 1900, based upon the known value of exports to and imports from that island by the principal commercial countries of the world, puts the total commerce of Haiti in that year at $6,175,000, of which about $4,900,000 were imports and about $1,275,000 exports. Of the imports practically three-fourths was drawn from the United States and of the exports an even larger proportion was sent to the United States. In the latest report the British consul quotes an estimate of the total value of imports into Haiti for the twelve months ended September, 1905, namely, $3,871,000, of which $2,747,000, or 71 per cent, is said to have come from the United States. No similar estimate for exports is available. The official figures of the United States with reference to its trade with Haiti show that imports from Haiti have decreased from $2,421,221 in 1890 to $1,184,797 in 1900 and $1,274,678 in 1907, and exports thereto have also decreased from $5,335,068 in 1890 to $2,996,689 in 1900 and $2,916,104 in 1907, these being fiscal-year figures in all cases.

COMMERCE.

The only reliable data on the trade of Haiti for recent years are compiled from foreign sources. In 1899-1900 the total imports were estimated by a German authority at $4,900,000, distributed among the principal nations as follows: United States, $3,700,000; France,

$450,000; Great Britain and colonies, $425,000, and Germany, $200,000. In 1901 the imports were estimated at $5,500,000. In 1902, owing to the revolution, they are said to have declined 30 per cent. The exports in 1901 were estimated at $1,275,000; in 1902 at $1,000,000. The data of imports from Haiti into the United States, United Kingdom, France, and Germany, in 1905, justify an estimate of the total value of exports from Haiti at $5,000,000.

From October 1, 1903, to June 30, 1904, 100,000,000 pounds of coffee were exported, being 30,000,000 pounds in excess of the exports of any previous year. But during the twelve months ended September, 1906, the exports of coffee again fell to 50,000,000 pounds. In 1904, 3,017,015 pounds of cotton were exported, against 3,260,271 pounds in 1903 and 2,000,000 pounds in 1902. In the fiscal year 1906 the exports of cotton amounted to 3,865,216 pounds. There were also exported in 1906, 6,208,289 pounds and 1,818 sacks of cotton seed, against 275,847 pounds in 1904 and 376,300 pounds in 1903. The quantity of cacao shipped from October 1, 1902, to September 30, 1903, was 4,990,520 pounds; from October, 1905, to September, 1906, 4,582,403 pounds; of logwood, 168,364,191 pounds and 120,252,960 pounds, respectively; of yellow wood, 623,955 pounds and 1,097,000 pounds; of guaiac (lignum-vitæ), 10,378,452 pounds and 4,837,560 pounds. Other articles exported in considerable quantities in 1906 are: Hemp, 669,853 pounds; orange peel, 494,492 pounds; hides and skins, 398,479 pounds; wax, 149,095 pounds; cedar wood, 613,000 pounds; tortoise shells, pistachio nuts, honey, besides small quantities of copper ore.

The official figures of the United States of the trade between the United States and Haiti (see table on pages 153 and 154) differ considerably from the German estimate given above. There was a sharp decline in imports from Haiti—from $2,747,000 in 1895 to $827,000 in 1899, or to less than one-third. Since 1900 the annual importation has averaged about a million dollars. Logwood, $256,000, forms nearly one-fifth of the total; coffee, $288,000, nearly one-fourth. Next follow cacao, $267,000; hides and skins, $122,000, and cabinet woods, $143,000. There has been a marked decline in the imports of logwood and coffee since 1900. In cacao and hides and skins there has been, on the whole, a steady increase. In cabinet woods the increase in imports has been almost uninterrupted since 1899.

French imports from Haiti in 1905 were $4,778,000, against $4,300,000 in 1904 and $6,180,000 in 1903. In 1905 they consisted practically of three articles: Coffee, $3,705,000; cacao, $281,000, and woods, $679,000. In the preceding year there were considerable imports of raw cotton, amounting to $200,000, but in 1905 these had fallen to such a small quantity that they were not separately stated. In the British statistics of imports, Haiti and Santo Domingo are combined. They show for 1904 a total of $337,000 (a slight increase over previous years), consisting mainly of logwood, $226,000, and raw cotton, $92,000, the trade in logwood having been practically stationary since 1900, while that in raw cotton was practically nothing in 1902. After 1904 the imports again declined to $153,000 in 1905 and were $209,000 in 1906, when logwood amounted to $156,000, or three-fourths of the total. The German figures show a decline in imports from Haiti from $1,108,000 in 1900 to $100,000 in 1905. In 1900 German imports of coffee were $394,000, and of cacao $564,000. In 1905 both had dwindled to practically nothing, leaving cotton and hides as principal items. In logwood, too, the trade has been largely diverted from Germany to France.

The United States exports to Haiti, as shown on pages 153 and 154, have declined almost uninterruptedly since 1895—from $5,092,801 in that year to $2,916,000 in 1907. The most important item in 1907 was cotton cloth, $608,000, or almost one-fourth of the total. Exports of cotton cloth to Haiti have remained practically stationary for the decade. Wheat flour, $522,000, the next largest item among the exports, shows a great decline as compared with $818,000 in 1895. A similar decline is shown in exports of provisions, the two principal items of which are pork, $136,000, and lard, $254,000, in 1907, against $973,000 and $289,000 in 1895.

French exports to Haiti have declined from $1,249,000 in 1903 to $1,094,000 in 1904 and $882,000 in 1905, made up mainly of fancy goods and notions, $177,000; cotton cloth, $110,000; wines, $88,000; medicines, $104,000, and clothing and underwear, $94,000. British exports to Haiti and Santo Domingo in 1906 were $1,603,000, showing a considerable increase over the preceding four years. They consisted mainly of cotton cloth, $1,198,000, besides which there were $48,000 of empty sacks, $45,000 of woolen goods, and $62,000 of metal goods. German exports to Haiti declined from $251,000 in 1900 to $179,000 in 1905, or about one-third, which is a trifle compared to the decline of imports into Germany. The principal item in German exports in 1905 was earthen, stone, and china ware, $33,000, while in 1900 the principal item was rice, $53,000, which in 1905 dwindled to $18,000. Next in importance in 1905 were cotton goods, $26,700; iron and manufactures thereof, $19,500; instruments, machines, and vehicles, $9,500. Thus, while Germany has been absorbing more and more of the carrying trade of Haiti and while most of the business of the Republic is carried on by German firms, the goods which form the subject of this trade have been derived to an increasing degree from countries other than Germany and the Haitian exports to Germany have become insignificant.

TARIFF.

The tariff of Haiti, containing over 1,600 schedules, provides specific import duties on a large number of products. In addition to these specific duties, there are surtaxes of 50 per cent, 33⅓ per cent, and one of 25 per cent in gold. There are also surtaxes of 20 and 10 per cent, respectively, on the export duties, which are levied on Haitian products, such as mahogany, animals, different kinds of wood, cacao and coffee, cotton, gums, hides and skins, and raw sugar. In addition to the duties and surtaxes mentioned, special taxes and dues, such as watch dues, pilot, sanitary inspection, water, and naturalization dues, are levied on imports, which are specified separately for the several ports.

MEXICO.

[Area, 767,258 square miles; population in 1900, 13,607,259.]

The total commerce of Mexico in the fiscal year 1907, was (including bullion and specie) $239,728,000, of which $116,215,000 were imports and $123,513,000 exports. Of the imports, 62.9 per cent was drawn from the United States, and of the exports 70.9 per cent was sent to the United States. The official figures of the United States with reference to its trade with Mexico show that the imports of merchandise only from that country have grown from $22,690,915 in 1890 to $28,646,053 in 1900 and $57,233,527 in 1907, and the exports of merchandise thereto from $13,285,287 in 1890 to $34,974,961 in 1900 and $66,248,098 in 1907, these being fiscal-year figures in all cases.

MANUFACTURES.

The Government statistics for 1902 enumerate 6,234 industrial establishments, employing 117,992 laborers, with a total production valued at about $70,000,000 United States gold. There are 2,082 sugar mills, in which the juice of the cane is extracted by wooden cylinders and boiled down into a dark-brown substance called "panocha," in the form of small cakes called "panelas" or "piloncillos." More important are the cotton mills, engaged in the making of cotton cloth called "manta," a coarse unbleached fabric, sold almost exclusively in the local markets. In 1904-5 the mills consumed about 68,000,000 pounds of cotton, a large portion of which was from the United States. At the end of the fiscal year 1905 the number of factories in operation was 128, by far the greatest number being located in the central States, Puebla leading with 29. The largest company is the Compañía Industrial de Orizaba, owning nearly one-fifth of the total cotton-manufacturing outfit of the Repub-

lic. As high as 15, 16, 30, and even 40 per cent dividends are mentioned as the profits of some of the cotton factories.

Nearly every State has its flour mills, the total number being 433, Michoacan leading with 74. They are not sufficient, however, to supply the local demand.

There are 21 iron and steel works in the country, one of the largest being the Mexican National Iron and Steel Company, located close to the Cerro del Mercado, the famous iron mountain of Durango. However, all others will be eclipsed by the works of La Compañía Fundidora de Hierro y Acero de Monterey, in the State of Nuevo Leon, which are approaching completion, with a capital of $10,000,000 Mexican silver ($4,980,000 United States gold). Torreon, another town in Nuevo Leon, is also an important center of the iron industry.

There were 242 tobacco factories, Jalisco leading with 40. The largest manufactories of cigars and cigarettes are in the Federal District and in the States of Puebla and Veracruz.

COMMERCE.

A prominent feature of the trade of Mexico is the preponderance of the United States both in imports and exports. In 1893 the imports from the United States were 60 per cent of the total imports and the exports to the United States 73 per cent of the total exports. In 1907 the United States furnished 62.9 per cent of the imports and took 70.9 per cent of the exports. Thus, while there has been a great increase in the trade between the United States and Mexico, both in imports and exports, the preponderance of the United States has remained about the same as it was fourteen years ago. Next in importance is the United Kingdom, the Mexican imports from which have increased from 5½ million dollars in 1893 to 11¾ millions in 1907, while the exports to that country, after attaining a maximum of 20.8 millions in 1906, declined to 15.9 millions in 1907. The relative positions of France and Germany during this period have been reversed, both in imports and exports. While in 1893 the imports from France were nearly double those from Germany, and the exports to France were also slightly in excess of those to Germany, in 1901 the imports from Germany for the first time exceeded those from France, and the divergence became further accentuated in 1903, when imports from Germany exceeded those from France by 3 millions. In 1906–7 the imports from Germany amounted to 12.2 millions, and exceeded those of France by 3.4 millions, and even those from the United Kingdom by about half a million dollars. The relative positions of Germany and France in the export trade of Mexico having been successively reversed, finally settled down in 1901 in favor of Germany, since which date the exports to Germany have risen to nearly three times those to France, the exports to Germany in 1905, $7,310,000, being nearly equal to the exports to the United Kingdom, $7,775,000; in 1907 they exceeded 10 million dollars. Next in importance is Spain, the imports from which into Mexico, aside from slight fluctuations, rose steadily from $2,212,000 in 1893 to $3,966,000 in 1907, while the exports to Spain from Mexico, $276,000 in 1893, rose with greater fluctuations to $1,080,000 in 1904 and $1,994,000 in 1907. In exports from Mexico Spain was surpassed almost during the entire period by Belgium, which in 1901 took from Mexico goods to the value of $2,172,000, and in 1907, $2,654,000. The imports into Mexico from Belgium, too, have for a time shown a remarkable rise, from $398,000 in 1893 to $2,590,000 in 1903, declining to $2,180,000 in 1904 and $1,561,000 in 1907. However, a considerable part of the Belgian trade probably consists of transit trade originating with other European countries. Among other countries may be mentioned Cuba, the exports to which, insignificant in 1897, rose to $971,000 in 1898, remaining practically at $2,500,000 during the four following years, then declining to $1,186,000 in 1907. This rapid increase was largely due to the exports of live stock needed to restock the Cuban plantations devastated during the war. The recent decline in this trade seems to indicate that the process of restocking is nearly completed.

A detailed statement of the distribution of the foreign trade of Mexico by countries since 1893 will be found in the statistical appendix, on page 77, and the data in regard to the imports and exports of the main articles of commerce on pages 98 to 100.

Mexico being a country of recent economic development, manufactured products naturally predominate in its imports, while the exports are nearly all made up of various raw materials. In the following two tables (71 and 72) a comparison is made of both the imports and exports as classified in a few large groups in the original reports of the Mexican Government for the fiscal years ended June 30, 1896, 1901, and 1906. A comparison of the earliest and last years shows a considerable increase in all of these groups, but some of them have grown much more rapidly than others. The increase seems to have been slight in the imports of manufactures ready for consumption, such as cloth, chemical and pharmaceutical preparations, spirituous liquors, paper, vehicles, and arms and explosives. Thus, while the value of the imports of all these groups has increased from $17,157,000 to $25,982,000, in 1896 they constituted over 40 per cent of the imports, and in 1906 only 24 per cent. On the other hand, the imports of machinery have doubled, those of animal products have increased 170 per cent, vegetable products 133 per cent, and mineral products (which group includes fuel and metals) over 417 per cent. The growing industrialization of Mexico seems on the one hand to have enabled it better to supply its own demands for simpler articles of consumption, while on the other hand, for the same reasons, its demand for food products, raw materials, and machinery has been rapidly growing.

TABLE 71.—IMPORTS INTO MEXICO, FISCAL YEARS 1896, 1901, AND 1906, BY GREAT GROUPS.[a]

GROUPS.	1896		1901		1906	
	Dollars.	*Per ct.*	*Dollars.*	*Per ct.*	*Dollars.*	*Per ct.*
Animal products	3,035,067	7.2	4,860,720	7.5	8,160,641	7.4
Vegetable products	6,963,051	16.5	10,185,243	15.7	16,243,231	14.8
Mineral products	8,769,800	20.8	19,031,291	29.2	45,286,841	41.2
Cloth, and manufactures of	9,426,103	22.3	9,212,507	14.2	11,465,219	10.4
Chemicals and pharmaceutical preparations	1,725,345	4.1	2,585,320	4.0	3,856,648	3.5
Spirits, beer, and mineral waters	2,530,249	6.0	2,788,920	4.3	3,608,683	3.3
Paper, and manufactures of	1,647,561	3.9	2,215,620	3.4	2,697,762	2.5
Machinery, and parts of	5,212,144	12.3	9,531,653	14.6	10,228,528	9.3
Vehicles	811,461	1.9	1,446,738	2.2	2,300,775	2.1
Arms and explosives	1,018,461	2.4	1,512,768	2.3	2,052,874	1.9
All other	1,114,696	2.6	1,712,673	2.6	3,983,034	3.6
Total	42,253,938	100.0	65,083,453	100.0	109,884,236	100.0

[a] For 1896 and 1901, values stated in gold pesos, which were taken to be equivalent to the United States dollar; for 1906, values stated in silver pesos, and converted at the legal rate of 49.8 cents.

At the same time this industrial development has not yet proceeded far enough to change the nature of its exports, as is shown by Table 72. The mineral development of Mexico within the last decade has increased the ratio of the mineral products to the total exports from 68.4 per cent in 1896 to 71 per cent in 1906, while the exports of animal products and manufactured articles, though showing a slight absolute increase, have proportionately declined. The precious metals still constitute considerably more than half of the total exports of Mexico. Within the short space of ten years silver exports have almost doubled and gold exports have increased fivefold.

The largest item in the import trade of Mexico during the last twelve years was machinery and apparatus, due to the rapid development of the mining industry and railway building, as shown by the fact that the mineral production, valued at $29,374,000 United States gold in 1898, was valued in 1903 at $38,138,000 United States gold, while the length of railways increased from 9,019 miles in 1898

to 12,227 miles in 1905. The imports of machinery in 1905, valued at $9,890,000, are greatly in excess of like imports previous to 1904, the nearest approach to that figure having been made in 1903, with $9,771,000. Machinery forms nearly half of the iron and steel imports, which reached a value of $20,218,000 in 1905; the next largest item in that group in 1903 was rails, and then construction materials. But the slackening of railway building within the most recent years reversed the order, the imports of construction material amounting to $4,145,000 and of rails to $1,805,000 in 1905. In nearly all classes of iron and steel manufactures the imports from the United States constitute more than half, often two-thirds or more, of the total.

Cotton and cotton goods are second in importance among the imports, with a total value of $10,261,000 for 1905. The largest item in this class is raw cotton, $4,099,000, which was five times greater than like imports of 1900; next came cotton cloths, $3,450,000, that item having been practically stationary during the entire period, with a maximum of $4,200,000 in 1896. Practically all the raw cotton comes from the United States, and is required to supply the deficiency in home-grown cotton for the Mexican cotton mills, which in 1904–5 consumed 35 million pounds of foreign raw cotton in addition to the crop of their own land. In the imports of cotton yarns and piece goods the United Kingdom far exceeds all competitors.

Coal, $2,552,000, forms the next largest item in Mexico's imports, and associated with it is coke, $1,089,000. The growth of coal imports has been remarkable, the figure for 1905 being more than four times that of 1894, while the figure for coke increased threefold. Nearly all the coal, namely, $1,980,000 worth, came from the United States, the United Kingdom ranking next with $525,000; in coke also the United States came first, contributing $835,000 worth, or almost 80 per cent, though only two years earlier more than half came from Germany. The weight of the total coal imported was 1,116,684 metric tons.

The lumber imports were $2,314,000 in 1905, this figure being five times that of 1894. Practically all this lumber comes from the United States, and the same is true of furniture and other manufactures of wood.

Among other large import items are wines, $1,931,000, of which more than half came from Spain, and of the remainder by far the larger part came from France; vehicles, $1,964,000, nearly two-thirds of which came from the United States; silk and manufactures thereof, $2,026,000, of which France furnished about one-half; paper and manufactures thereof, $2,267,000, in which the United States leads, with Germany second; gunpowder and other explosives, $1,306,000, nearly three-fourths of which came from the United States; copper and manufactures thereof, $3,116,000, mostly from the United States; woolen cloths, $1,467,000, in which the United Kingdom leads, closely followed by France, with Germany third; the imports of wheat and other cereals in 1903 were $1,345,000, of which $1,297,530 came from the United States, but since then these imports declined to $217,000 in 1905.

TABLE 72.—EXPORTS FROM MEXICO, FISCAL YEARS 1896, 1901, AND 1906, BY GREAT GROUPS.[a]

GROUPS.	1896		1901		1906	
	Dollars.	*Per ct.*	*Dollars.*	*Per ct.*	*Dollars.*	*Per ct.*
Gold	3,087,675	5.5	4,397,168	6.0	15,784,497	11.7
Silver	31,536,136	56.2	35,558,605	48.7	62,449,242	46.3
All other mineral products	3,760,039	6.7	8,118,831	11.1	17,735,436	13.1
Vegetable products	13,472,611	24.0	17,749,213	24.3	31,338,211	23.2
Animal products	3,391,509	6.1	5,665,200	7.8	5,838,266	4.3
Manufactured products	820,058	1.5	1,175,998	1.6	1,483,264	1.1
All other	10,999	(b)	326,554	.5	398,212	.3
Total	56,079,027	100.0	72,991,569	100.0	135,027,128	100.0

[a] Values as expressed in Mexican dollars have been converted at the following rate: 1896, 53.4 cents; 1901, 49.1 cents; 1906, 49.8 cents.
[b] Less than 0.1 per cent.

While from 1895 to 1899 silver was mostly exported in bars, the largest export item since 1900 has been argentiferous lead and copper, three-fourths of which goes to the United States, which takes also most of the other forms of silver and silver ore. Nearly all the gold is exported in the form of bullion, of which the United States takes eight-ninths. The value of the copper exports, 14 million dollars in 1905, was in excess of the gold exports during the same year. None of the other exports of minerals are of importance except lead, $3,600,000 in 1905, 70 per cent of which went to the United States.

Coffee exports have declined from $6,295,000 in 1894 to $4,304,000 in 1905, or over 30 per cent. The decline, evidently due to the low prices prevailing during recent years, has been almost continuous since 1895. More than one-half of the Mexican coffee went to the United States, and over one-fourth to Germany. The exports of henequen, only $3,591,000 in 1894, have increased to $13,666,000 in 1905, or nearly fourfold. The increase in exports of istle has been in almost the same proportion. Practically all the henequen and istle go to the United States.

There has been a steady growth in the exports of rubber, to which considerable attention is given in Mexico, but so far the amount is small, being $334,000 in 1905.

The exports of cattle increased steadily until 1901, since which time they have fallen off rapidly, being smaller in 1905 than at any time since 1895. Of the $1,090,000 worth of cattle exported in 1905, about two-thirds went to Cuba and nearly one-fifth to the United States. Cuba also took nearly all the horses exported.

Hides and skins exported in 1905 were valued at $3,134,000, the largest item being kid skins, $1,690,000, practically all of which went to the United States.

AMERICAN INVESTMENTS IN MEXICO.

American investments in Mexico aggregate probably more than $750,000,000. In 1902, according to the report of the United States consul, 1,117 American companies, firms, and individuals had at that time invested in Mexico $500,000,000 gold, in round figures, and the increase since that time has probably averaged over 50 millions annually. About half of this has been invested since 1898.

About two-thirds of this total is invested in railroads. All the important railroads in Mexico (except the Interoceanic, the Mexican, and the Tehuantepec) are owned chiefly by Americans, the amount of stock held by others than Americans being comparatively small. Of the total investments in Mexican railways, 80 per cent belongs to Americans. The Mexican Central represents the largest single American interest in Mexico, having expended for the construction and equipment of the road to the end of 1902 the sum of $158,999,979. The Mexican National is next in rank, with an investment of $107,350,000.

Next in importance is the mining industry, in which Americans have invested nearly $100,000,000. The largest share of this, or $27,800,000, is in Sonora mines, $21,000,000 in Chihuahua, $6,500,000 in Durango, and $6,000,000 in Coahuila.

Investments in agricultural enterprises amount to about $30,000,000.

In manufactories and foundries about $10,000,000 had been invested up to 1902, but the figure doubtless is very much larger now, in view of the enormous development that has taken place, especially in the State of Sonora and at Monterey. In 1902 the State of Sinaloa headed the list with $4,000,000, invested mostly in sugar refineries; the State of Nuevo Leon came next, with $2,500,000, invested mostly in the smelters at Monterey; the Federal District came third, with $2,400,000.

In banking $4,250,000 was invested in 1902, of which $2,700,000 was in the Federal District and $1,500,000 in Nuevo Leon.

Other investments exceeding $1,000,000 are as follows: Architects, engineers, contractors, $3,000,000; assay offices and labora-

tories, $7,000,000; brokers, commission men, general agents, $1,500,000; electric light, telegraph, telephone, etc., $6,000,000; lumber and sawmills, $1,600,000, and real-estate dealers, building companies, etc., $3,000,000.

CURRENCY.

In December, 1904, a bill was passed for the reform of the existing currency which was intended to create a stable silver currency as a transition step to the gold currency. The chief provisions of the law were the arbitrary fixing of the value of the Mexican silver dollar, which contains 24.4391 grams of fine silver and 2.6342 grams of copper, at 49.8 cents United States currency, which also happens to be the value of the Japanese yen, and is the equivalent of 75 centigrams of fine gold. The unlimited coinage of silver was abolished and the right to issue silver coin reserved to the Government. The law came into force May 1, 1905, and immediately showed its beneficent effect on Mexican commerce and industry. The stability of the currency, which removed the extreme fluctuations in foreign exchange, has stimulated international dealings and is expected to attract foreign capital to even a greater extent than has been the case heretofore.

The Government has been able without any difficulty to maintain the newly established value of the silver dollar. It has rapidly introduced considerable quantities of gold currency in circulation, the amounts of gold coined during the fiscal years 1906 and 1907 being $20,804,700 and $11,578,500, respectively. The continuous rise of silver in the world markets during the more recent period proved a potent factor in making gold part of the national circulation, since the Government was able to and actually did sell with profit silver in exchange for gold to be used as circulating medium at home. It is reported that considerable quantities of gold coins have been put into circulation by the Government, though naturally the change from the former system of an exclusive silver circulation to one composed of gold and silver must proceed gradually. Both the Government and the principal banks hold now considerable quantities of gold as a part of their reserve, and exchange funds for their circulating bank notes.

TARIFF.

The present tariff law of Mexico took effect September 1, 1905, when rates were revised to bring them in accord with the changed standard of value. The tariff is highly protective on all products which it is intended to produce at home. The duties are all specific. Raw materials needed in the production of manufactured articles are mostly admitted free or at low rates of duty. In revising the tariff most of the surtaxes which were formerly imposed upon imports have been abolished with the exception of the municipal surtax of 1½ per cent on the amount of the duties and the stamp duties on tobacco, which are paid not only on imported products, but on products of domestic manufacture as well. An export duty is levied on certain kinds of wood, grasses, henequen, istle, and hides and skins.

[A detailed discussion of conditions in Mexico, entitled "Commercial Mexico in 1904," was published by the Bureau of Statistics of the Department of Commerce and Labor in February, 1905.]

MIQUELON, LANGLEY, AND ST. PIERRE (FRENCH).

[Area, 93 square miles; population in 1902, 6,482.]

This group of islands lies off the south coast of Newfoundland and, being of an extremely rocky character and unfit for agriculture, the inhabitants are chiefly engaged in the cod-fishing industry. The imports in 1906 were valued at $1,013,000, about one-half being from France. The exports in the same year were $1,218,000, of which about nine-tenths represented domestic products, chiefly fresh or dried cod, cod-liver oil, etc. The trade of Miquelon, Langley, and St. Pierre with the United States is inconsiderable, imports in 1906 from the United States having been $255 in value, and exports thereto $105,096. Formerly the exports from the United States to this colony ranged from $200,000 to nearly $500,000 annually, and imports in the five years 1894 to 1898, inclusive, averaged about $150,000 per annum; but since 1900 the trade has decreased until in 1907 the imports from these islands amounted to only $515 and the exports thereto $49,737.

COMMERCE.

The imports into Miquelon have been rapidly declining within the last decade, after reaching the highest point of 2½ million dollars in 1898 and 1899. In 1901 they amounted to $1,879,000, in 1903 to $1,600,000, in 1905 to $1,050,000, and in 1906 to $1,013,000 only. They consist mainly of breadstuffs, meats, spirituous liquors, sugar, vegetables, etc. The large imports of salt used in the preparation of fish for export deserve some mention, and even these have fallen off greatly. In 1897 they amounted to almost 80 million pounds, falling off to 16 million pounds in 1905, as a result of the decreased exports of pickled codfish from 75 million pounds in 1897 to 24 million pounds in 1905. Practically the entire exports from Miquelon are sent to France, which supplies about one-half of the imports, but Canada and the United States also contribute fairly important shares of the latter. From the United States the island of Miquelon obtains most of its wheat flour, sugar, tobacco, petroleum, anthracite, and a very small share of the textiles; also most of its salt beef and pork. About 95 per cent of the live animals come from Canada, as well as about 90 per cent of the butter and almost all its fodder and all the coke. Most of the beverages and the manufactured articles, such as textiles, iron, etc., are brought from France.

NEWFOUNDLAND.

[Area, 40,200 square miles: population in 1901, 217,037 (exclusive of Labrador, with an area of 120,000 square miles and a population of 3,634).]

The total commerce of Newfoundland in the fiscal year ended June 30, 1906, was $22,500,000, of which $10,414,000 were imports and $12,086,000 exports. Of the imports 34.7 per cent was from the United States, and of the exports 10.6 per cent was sent to the United States. The official figures of the United States with reference to its trade with Newfoundland including Labrador show that the imports from that country have grown from $354,003 in 1890 to $562,759 in 1900 and $1,478,259 in 1907, and the exports thereto from $1,221,704 in 1890 to $2,017,524 in 1900 and $2,920,349 in 1907, these being fiscal-year figures in all cases.

COMMERCE.

Considering its small population, Newfoundland has quite a large and rapidly growing foreign trade. The exports increased from $6,184,000 in 1890 to $12,086,000 in 1906, or nearly doubled in sixteen years. The imports increased with almost equal rapidity, namely, from $6,453,000 in 1890 to $10,414,000 in 1906. Fishing being the main industry of Newfoundland, the products of this industry naturally constitute much the greater part of the total exports. In 1906 the exports of dried cod amounted to 166 million pounds, valued at $7,865,000, or over 65 per cent of the total exports. Other fish exported amounted to $808,000; the exports of various oils obtained in the fishing industry, such as cod oil, seal oil, and whale oil, amounted to $874,000, and sealskins to $314,000. Thus, all the products of the fisheries together amounted to $9,861,000, or about 82 per cent of the exports. The only other important items were iron and copper ore, exports of iron ore having rapidly increased from less than $59,000 in 1891 to $1,100,000 in 1906, while the exports of copper ore average about $400,000.

These exports of Newfoundland find a rather extensive market both in Europe and in North and South America. While the United Kingdom for several years, beginning with 1902, absorbed a greater share of these exports than any other country, in the latest year Brazil, Portugal, and Canada surpassed that country as markets for the goods of Newfoundland. The four countries named

and the United States and Italy received approximately equal portions of the Newfoundland exports, namely, from about 12 to 18 per cent each, and together they claim between three-quarters and four-fifths of these exports. This wide distribution is mainly found in the exports of the fish products, while the iron ore is sent mainly to Canada, pyrites altogether to the United States, and the copper ore is taken in about equal shares by the United Kingdom and the United States.

The imports of Newfoundland consist, as might be expected, mainly of articles of immediate consumption, such as foodstuffs of animal and vegetable origin, sugar, tea, coal, salt, textiles, and wearing apparel. Like many other countries of the American continents, Newfoundland imports large quantities of goods from the United States and the United Kingdom, but it differs from the Latin-American countries in that it buys very little from the Latin countries of Europe or even from Germany. In fact, the main source of supply is Canada, which contributes from 35 to 40 per cent of the imports, while the United Kingdom and the United States contribute normally about 25 per cent each, though in the latest year for which figures are available the exports from the United States have greatly increased, exceeding even those from Canada. Flour constitutes the main item of import, and about two-thirds of it comes from Canada and one-third from the United States. Meat products, particularly salted beef and pork, come almost exclusively from the United States, while textiles are supplied mainly by the United Kingdom.

For detailed statements in regard to the foreign commerce of Newfoundland see the statistical appendix, pages 70, 78, and 101.

PARAGUAY.

[Area, 157,000 square miles; population in 1899, 630,103.]

The total commerce of Paraguay in 1904, the latest year for which statistics are available, was $6,745,000, of which $3,566,000 were imports and $3,179,000 exports. Of the imports 3.5 per cent was drawn from the United States, no direct exports to the United States being shown in the Paraguayan report. The official figures of the United States with reference to its trade with Paraguay show that the imports from that country have grown from $1,740 in 1901 to $3,819 in 1907, and the exports thereto from $12,695 in 1901 to $173,560 in 1907, these being fiscal-year figures in all cases.

COMMERCE.

The exports and imports of Paraguay during 1904, according to the report of the chamber of commerce at Asuncion, amounted to $3,178,819 and $3,565,631, respectively. In 1899 they amounted to $2,900,000 and $2,147,838, respectively. The chief imports in 1904 were as follows: Textiles, $1,151,556; groceries, $619,371; manufactures of iron and steel, $518,792, and beverages, $264,941. The chief exports in 1903 were as follows: Hides and skins, $1,056,220; yerba maté, $789,843; woods, $585,061; jerked beef, $398,558; tobacco, $323,952; quebracho extract, $300,628, and oranges, $156,173. Of the imports in 1904, the United Kingdom is credited with $1,168,198, or about one-third of the total; Germany with $887,668, or one-fourth of the total; Argentina with $435,544, or one-eighth; France with $311,650, or about 9 per cent of the imports; Italy with $294,809; Spain with $206,652, and the United States with $125,296. The imports from the United Kingdom consist largely of textiles and manufactures of iron and steel. The imports from Germany are chiefly textiles, manufactures of iron and steel, and foodstuffs. The imports from Argentina are chiefly foodstuffs; those from France are to a large extent textiles, foodstuffs, and beverages. Beverages occupy the first place in the imports from Italy. Owing to the fact that the exports from Paraguay must pass either through Brazilian or Uruguayan ports, there are no statistics of the distribution of the exports by foreign countries. By far the larger part of the trade passes through the Asuncion custom-house.

TARIFF.

The import tariff of Paraguay provides for ad valorem rates of duty ranging all the way from 2 to 80 per cent. The new tariff, which went into effect March 16, 1906, divides the imports into ten classes.

The first class provides a duty of 35 per cent ad valorem on all articles not specially mentioned; the second, with a duty of 2 per cent ad valorem, includes iron, steel, and copper bars and plates, and precious stones; the third, 5 per cent ad valorem, includes gold and silver jewelry, scientific instruments, sewing machines, spades, wheat, and other articles; the fourth, 15 per cent ad valorem, includes, among other articles, cast iron in bars, and fire bricks; the fifth, 20 per cent ad valorem, includes flour, unpolished marble, and ammunition; the sixth, 25 per cent ad valorem, firearms, cotton goods, etc.; the seventh, 40 per cent ad valorem, includes all kinds of oils (except petroleum), porcelain, silk goods, etc.; the eighth, 55 per cent ad valorem, harness and other leather goods, coffee, shoes, cigars and cigarettes, confectionery, corn, furniture, ready-made clothing, wines, matches, etc.; the ninth, 80 per cent ad valorem, includes alcohol, rum, and playing cards. The tenth class, or free list, includes telegraph wire, cattle for breeding purposes, agricultural implements, railway appliances, crude chemicals, locomotives, machinery, Roman cement, steel and iron wire for fencing purposes, etc.

PERU.

[Area, 695,700 square miles; population estimated at about 4,500,000.]

The total commerce of Peru in 1905, the latest year for which statistics are available, was $49,086,000, of which $21,068,000 were imports and $28,018,000 exports. Of the imports 16.2 per cent was drawn from the United States, and of the exports 9.2 per cent was sent to the United States. The official figures of the United States with reference to its trade with Peru show that the imports from that country have grown from $351,695 in 1890 to $2,122,543 in 1900 and $4,958,202 in 1907, and the exports thereto from $1,427,301 in 1890 to $1,662,475 in 1900 and $6,075,739 in 1907, these being fiscal-year figures in all cases.

Peru lies wholly within the Tropics, and is divided geographically into three regions. The narrow coast region rises to about 4,000 feet, and has a hot, dry climate. The Andes region has a temperate or even cold climate, with considerable rain and snow fall. East of the Andes lies the forest region or "montaña," with its fertile river valleys and navigable rivers belonging to the Amazon system.

The coast region, although largely a desert, is the most developed part of the country, not only in commerce, for which it is adapted by its position and transportation facilities, but also in agriculture and the manufacturing industries. In the irrigated valleys of the coast there are raised considerable crops of sugar, cotton, rice, corn, coffee, cacao, tobacco, etc. The production of sugar has increased from 95,000 metric tons in 1895 to over 150,000 metric tons in 1906, of which by far the larger part is exported. The cotton output for 1904 is estimated officially at 10,000 metric tons. The highland regions are well adapted for cattle raising, but the industry has undergone very little systematic improvement. An English company has recently imported about 6,000 sheep of improved breeds, with promising results. In spite of the rather primitive condition of the grazing industry in Peru, the exports of wool during 1905 amounted to about $2,341,000, of which alpaca wool constituted about 80 per cent.

The "montaña" of Peru abounds in rubber, but the systematic exploitation of the rubber regions is retarded by insufficiency of transportation facilities. The principal manufacturing establishments are sugar mills, cotton mills (with an annual production of about 20,000,000 yards of cloth, mostly coarse), woolen mills, hat factories, oil presses, cocaine factories, and cigar factories. Almost all of the larger establishments are operated by foreigners.

TRANSPORTATION.

The transportation facilities of Peru are as yet far from adequate. The railways, of which there were about 1,200 miles in 1905, are confined to a large extent to the coast region, where natural obstacles to construction are slight. But as the economic importance of the "montaña" is recognized more and more, and its valuable resources are beginning to attract the attention of the large foreign syndicates, the railway lines are gradually extended into the sierra regions, and plans are well advanced for connecting the headwaters of the Amazon with the coast by rail. Thus Lima is now connected by rail with Cerro de Pasco, the center of the mining industry, and there is a line running from the port of Mollendo to Sicunai, 87 miles from Cuzco. The Sicuani-Cuzco line is now in course of construction. There is a branch line from Juliaca, on the Mollendo-Cuzco line, to Puno, on Lake Titicaca, by which an outlet is afforded to a part of the Bolivian exports. Most of the railways belong to the State, but are operated by the Peruvian Corporation, in accordance with the agreement of 1890. Peru is connected by telegraph with Bolivia, and there are cable stations at Payta, Callao, Lima, Baranca, and Mollendo. An automobile freight line has recently been established between Lima and Callao.

COMMERCE.

The imports into Peru increased from $8,274,000 in 1891 to $21,068,000 in 1905, an increase of about 154 per cent. Exports from Peru increased during the same period from about $8,106,000 to about $28,018,000, or over 246 per cent. The main exports in 1905 (the latest year for which detailed statistics are available) were as follows: Sugar, $8,923,000; minerals, metals, etc., $5,243,000; gums and resins, $4,448,000; wool, $2,341,000; cotton, $2,008,000; guano, $1,391,000; leather and manufactures thereof, $695,000, and cocaine, $567,000.

Taken together, these eight articles, in 1905, constituted 91.4 per cent of the total exports from Peru. As is seen from the above enumeration, by far the greater part of the Peruvian exports consists of products of agriculture and animal industry, while minerals form a little less than one-fifth of the exports. In Table 74 the exports from Peru are given by main articles for 1902 to 1905, earlier figures not being available in any form convenient for comparison. A comparison for this short period indicates a much larger growth in the exports of products of forestry and animal industry than in those of agriculture. Thus, the exports of gums and resins have increased from $1,800,000 to about $4,450,000, or about two and one-half times; exports of wool have more than doubled, while the exports of cotton have increased about 30 per cent and those of sugar about 50 per cent.

As is to be expected, the imports into Peru consist of a much greater variety of articles, mainly for immediate consumption, such as cotton goods, wheat, wines and liquors, drugs, coal, etc. The only important exception is to be found in the imports of iron and steel and machinery, these being largely used in the growing mining industry of Peru. The imports of the main articles are shown in Table 73.

On page 78 will be found a table giving the imports and exports to and from Peru by main countries, which shows that the United Kingdom claimed in 1905 over one-half of the total exports. This proportion holds good almost through the entire period for which the data are given. Chile, Peru's neighbor on the south, comes second, though at a very great distance, taking in 1905 less than 4 million dollars' worth of Peruvian exports, after which come the United States, Germany, and France, in the order mentioned. Together these five countries took about 90 per cent of the articles shipped. The same countries furnish Peru with the greater share of its imports, though the predominance of the United Kingdom is not so noticeable. In 1905 about 35 per cent were supplied by the United Kingdom, about 16 per cent each by the United States and Germany, and about 6 per cent each by France and Chile. It was shown by Mr. Hutcheson, special agent of the Department of Commerce and Labor, that comparing the two five-year periods of 1895–1899 and 1900–1904, the average imports from the United States have

[a] Compiled from Deutsches Handels-Archiv, June, 1907.

increased 166.1 per cent; those from the United Kingdom, 27.1 per cent; from Germany, 54.6 per cent; from France, 53.5 per cent, and from Italy, 68.7 per cent. The rapid increase in imports from the United States is due largely to the increase in American investments in Peru, which are estimated at present at $25,000,000. The greatest increase is shown in the imports of manufactures of iron and steel, 201.1 per cent. The imports of cotton goods from the United States are still very small, the increase for the two periods named being only 14.7 per cent, as compared with 146.5 per cent in the imports from Italy. This is attributed to the fact that Peru is manufacturing unbleached cotton goods, which constitute a large part of our exports of cotton manufactures to that country. The imports of breadstuffs, provisions, and other foodstuffs from the United States have increased to a large extent, breadstuffs having advanced from an annual average of $38,200 in 1895–1899 to $446,100 in 1900–1904, and provisions from $49,500 to $163,000 during the same periods. According to figures published by the Bureau of Statistics, the total exports from the United States to Peru during the fiscal year 1906 were $4,833,307, the principal articles being as follows: Iron and steel and manufactures thereof, $,1518,201; breadstuffs, $693,612; cotton cloth, $97,916; wood and manufactures thereof, $600,521; cars, carriages, etc., $196,512; and chemicals, drugs, etc., $156,459. The imports into the United States from Peru during the same year amounted to $2,454,943, the chief commodities being: Sugar, $757,356; raw cotton, $430,087; chemicals, drugs, etc., $434,746; wool, $286,028; guano, $273,988; goat skins, $257,907, and rubber, $79,351. The chief ports of Peru are Callao, Mollendo, Salaverry, Iquitos (on the Amazon), and Payta. There is direct steam communication with Panama and the United Kingdom. The merchant marine of Peru is as yet insignificant.

TARIFF.

The import tariff of Peru consists almost entirely of ad valorem rates of duty, which, in common with the general custom in South American countries, are virtually made specific by means of a valuation tariff fixing the values of merchandise for customs purposes. The tariff contains over 3,300 schedules with rates of duty of 10, 20, 25, 40, 45, and 65 per cent ad valorem. A few articles (wheat, flour, opium, kerosene, and beer in bottles) are subject to specific rates. The free list includes, among other products, steel in bars or sheets, copper wire, plows, pumps, coal, Roman cement, copper, explosives, railway appliances, agricultural implements, fire bricks, all kinds of machinery, sewing machines, boilers, cranes, etc.

SANTO DOMINGO.

[Area, 18,045 square miles; estimated population in 1906, 600,000.]

COMMERCE.

The total commerce of Santo Domingo ranges between 6 and 10 million dollars annually. Since the administration of customs was intrusted to officials selected by the United States Government both the imports and the exports have materially increased. In 1906 the total trade amounted to $10,825,000, of which the imports were $4,281,000 and the exports $6,544,000. Of the imports, 58.5 were drawn from the United States, and of the exports 57.3 per cent were sent to the United States. The official figures of the United States with reference to its trade with Santo Domingo show that imports therefrom have increased from $1,951,013 in 1890 to $3,680,413 in 1900 and $3,370,899 in 1907, and exports thereto from $950,217 in 1890 to $1,317,098 in 1900 and $2,509,817 in 1907.

Official statistics of commerce of Santo Domingo were meager until 1905, and information, very fragmentary at best, could be compiled only from reports of consuls located in that country and from the statistics of foreign countries showing their trade with Santo Domingo.

The exports and imports from 1890 to 1906 are given as follows:

TABLE 75.—COMMERCE OF SANTO DOMINGO, 1890 AND 1892–1906.

YEARS.	Imports.	Exports.	YEARS.	Imports.	Exports.
	Dollars.	*Dollars.*		*Dollars.*	*Dollars.*

1893	1,888,000	3,750,000	1901	2,987,000	5,224,000
1894	1,550,000	2,880,000	1902	.....	4,483,000
1895	1,732,000	1,764,000	1903	.....	4,779,000
1896	1,704,000	2,199,000	1904	.....	.....
1897	2,246,000	3,568,000	1905	3,096,263	6,896,098
1898	2,274,000	2,725,000	1906	4,281,337	6,543,872

Fairly complete records of the foreign trade of Santo Domingo have been published for 1905 and 1906; that is, since the introduction of the change in the customs administration mentioned above. In Table 76 the imports and exports of these years are given by countries. In 1905 63 per cent and in 1906 nearly 60 per cent of the imports came from the United States. Of the exports 65 per cent went to the United States in 1905 and only 57 per cent in 1906. In 1902, according to an estimate made by the French consul, the total exports equaled about $4,818,000, of which $2,641,000 went to the United States, or about 55 per cent. This comparison seems to show that no great change in the currents of trade has been caused by the changes in the customs administration. Germany is next in importance both in imports and in exports. The imports from Germany in 1906 were almost double those of 1905 and constituted over 19 per cent of the total; the exports to Germany increased from $1,261,000 to $2,100,000 and constitute now nearly one-third of the total exports. Among the purchasers of the products of Santo Domingo, France holds third place, followed, though at some distance, by the United Kingdom, while in the imports the order is reversed. The trade of Santo Domingo with all other countries except the four mentioned is quite insignificant, the imports amounting to about 5 per cent and the exports to no more than 1½ per cent.

[a] Compiled from Bulletin of the Bureau of the American Republics, Vol. XXIV.
[b] Included in "Other countries."

The quantities and values of the articles exported, as well as the main countries to which the most important articles were shipped in 1905 and 1906, are shown in Table 77. For comparative purposes the values of exports in 1902, as estimated by the French consul, are given, and from this table the following facts may be gleaned: Sugar and cacao are the most important articles of export, each constituting in 1906 about one-third of the total. As far as it is possible to judge from crude commercial estimates, the sugar industry has remained nearly stationary in Santo Domingo, and the exports in 1906 were no greater than in 1902. On the other hand, the exports of cacao have been growing rapidly and have

increased about 40 per cent within the short space of time from 1902 to 1906. The exports of tobacco and bananas have grown still more rapidly, the first having trebled, while the exports of bananas have increased over eightfold within the same years, largely due to the operations of the United Fruit Company. Coffee, hides and skins, and vegetable wax constitute the bulk of all other exports. In the case of these exports, several interesting peculiarities may be noticed. Practically all the sugar and all the bananas go to the United States, but only one-third of the cacao and but little over one-fifth of the coffee and of the tobacco leaf. Germany takes more than half of the cacao, about 60 per cent of the tobacco leaf, and about 45 per cent of the coffee, while the exports to France consist mainly of cacao, tobacco, and coffee.

[a] Compiled from Bulletin of the Bureau of the American Republics, Vol. XXIV.
[b] Estimates of French consul.
[c] Not separately stated.

In the import trade the first place is occupied by cotton manufactures, which in 1906 had a value of $1,136,000, or considerably over one-fourth of the total imports. It is encouraging to find that more than one-half of these cotton manufactures are derived from the United States. Iron and steel manufactures constitute the second item, worth $474,000, or 11 per cent of the total. Over 60 per cent of these is bought in the United States. Rice, credited to Germany, but probably derived from the Dutch East Indies, wheat flour, entirely from the United States, and provisions, partly from the United States and partly from Germany, are the most important of the other articles of import. Leather manufactures, wood manufactures, fish, chemicals, drugs and dyes, and sugar and confectionery are all derived almost exclusively from the United States.

In view of the meager data of the commerce of Santo Domingo for any but recent years, it is necessary to turn to the records of the countries with which Santo Domingo is trading. The imports of the United States from Santo Domingo from 1903 to 1907 are shown in a table on page 160. Throughout the decade sugar has been by far the most important item, constituting in 1906 60 per cent, and in some earlier years an even larger proportion of the total. The imports of Dominican cacao, though in 1906 only a little over one-third those of sugar, have increased far more rapidly. The most remarkable development has been in the banana trade, which rose from practically nothing in 1894 to $260,000 in 1906, occupying now the third place. Dyewoods, which in 1895 and 1896 came next after sugar, dwindled to almost nothing in 1904, though since 1905 they show once more a considerable rise, probably due to the opening of new tracts by railway.

The German statistics show an increase in special imports from Santo Domingo from $1,270,000 in 1900 to $2,427,000 in 1905. By far the largest item in the German imports is cacao, which rose from $184,000 in 1900 to $1,053,000 in 1905—that is, from one-seventh to almost one-half of the total. Coffee meantime fell off from $247,000 to $65,000. Other notable imports into Germany were divi-divi, $12,000; cattle hides, $113,000; leaf tobacco, $735,000; beeswax, $131,000. Imports into France increased from $313,000 in 1900 to $729,000 in 1905. Cacao, $630,000, formed nearly seven-eighths of the total. Of other items only raw coffee, $43,000, is noteworthy. The British statistics of trade with Santo Domingo are combined with those for Haiti.

[a] Compiled from Bulletin of the Bureau of the American Republics, Vol. XXIV.

A table on pages 160 and 161 shows the exports from the United States to Santo Domingo for the years 1903 to 1907. These exports have remained practically stationary—in the neighborhood of a million and a half dollars. The largest item, constituting one-fifth of the total exports from the United States to Santo Domingo in 1906, was cotton cloths, $300,000. Wheat flour, $247,000, in 1906, was much below the figure for cotton cloth. Iron and manufactures thereof formed an aggregate of $327,000; leather and manufactures thereof, $104,000, of which boots and shoes were $67,000; meat and dairy products, $146,000, and wood and manufactures thereof, $96,000.

German exports to Santo Domingo show a gradual decline from $292,000 in 1900 to $208,000 in 1903, but increased to $364,000 in 1905. Imports of cleaned rice amounted to $84,000, or 23 per cent, and beer in bottles to $34,000, or nearly 10 per cent. Other important articles were arms and cutlery. The French exports, $124,000 in 1905, against $6,000 in 1900, consisted mainly of cotton goods, woolen goods, and toys. The British exports to Santo Domingo, merged with those of Haiti, are stated by the French consul to be slightly in excess of those of France, but to have diminished one-half since 1896.

TARIFF.

The import tariff of Santo Domingo contains over 2,000 schedules, the rates being mostly specific. A number of the articles for which ad valorem rates are provided have their values specified in the tariff, making the rates virtually specific. The tariff is a revenue measure. In addition to the regular import duties, a number of surtaxes, stamp duties, consumption taxes, etc., are levied. The Republic has also an export tariff, levying rates on a considerable number of products.

URUGUAY.

[Area, 72,210 square miles; population in 1902 estimated at 978,000.]

The total commerce of Uruguay in 1904, the latest year for which complete statistics are available, was $61,731,000, of which $21,938,000 were imports and $39,793,000 exports. Of the imports 9.7 per cent was drawn from the United States, and of the exports 5.4 per cent was sent to the United States. The official figures of the United States with reference to its trade with Uruguay show that the imports from that country have grown from $1,754,903 in 1890 to $1,848,077 in 1900 and $3,160,891 in 1907; and the exports thereto were $3,351,874 in 1890, $1,816,720 in 1900, and $3,412,785 in 1907, these being fiscal-year figures in all cases.

COMMERCE.

The trade of Uruguay has been practically stationary during the last decade. This phenomenon, which presents a decided contrast to the conditions prevailing in the neighboring La Plata States, is attributed generally to the frequent political disturbances from which the country has suffered of late. From 1891 to 1897 the annual exports averaged about $30,500,000, as compared with the annual average of about $34,500,000 for the period of 1898–1904. The imports for the same periods averaged $22,346,000 and $24,808,000 per annum, respectively. The position of the chief competing nations in regard to the import trade of Uruguay is discussed by Special Agent Hutchinson as follows:

Among the chief sources of supply of these imports the United States holds fourth place, being surpassed by England, Germany, and France. The increase in our trade in the past few years, however, has been fairly satisfactory, and there are indications that we may soon pass France and take third place. The following table illustrates the movement which is taking place. The figures are compiled from the export statistics of the various countries mentioned as being more reliable than the Uruguayan import statistics. They show the annual average value in thousands of United States dollars of exports to Uruguay of all domestic merchandise for the two five-year periods named:

TABLE 79.—AVERAGE ANNUAL VALUE OF EXPORTS TO URUGUAY FROM LEADING COUNTRIES, 1894–1903.

COUNTRIES.	1894-1898	1899-1903	Increase.
	Dollars.	*Dollars.*	*Per cent.*
United Kingdom	6,300,000	7,400,000	17.4
Germany	2,030,000	2,895,000	42.6
France	2,040,000	2,115,000	3.7
United States	1,140,000	1,500,000	31.6
Italy	1,664,000	1,204,000	[a] 27.6
Belgium	312,000	375,000	[a] 20.2

[a] Decrease.

Data of the distribution of the foreign trade of Uruguay by countries, according to its own official figures, are given on page 79, in the statistical appendix. In the import trade the United Kingdom is seen to occupy the most important position. Nevertheless, this preeminence is not so strongly expressed as is the case in some of the other South American countries, since in 1903 the imports from the United Kingdom amounted to 25 per cent of the total imports and the actual value of the imports decreased from over 9 million dollars in 1890 to less than 7 million dollars in 1903. On the other hand, the imports from Germany are rapidly growing, having increased from $1,900,000 in 1891 to $3,650,000 in 1903, or, in percentages of the total imports, from 10 per cent in 1891 to 14 per cent in 1903. France, Italy, Argentina, and the United States contribute from 2 to 3 million dollars' worth of goods annually, but the United States stands only sixth in the list. Still less important is the place of the United States in the exports, in which respect it occupied in 1903 the seventh place, with a total of $1,788,600, or less than 5 per cent of the total exports. The bulk of these exports goes mainly to Latin countries, namely, France, Belgium, and Argentina, which took in 1903 over 6 million dollars' worth each and together about half of the exports. Five and a half million dollars' worth went to Brazil, almost 5 million dollars' worth to Germany, and less than 3½ million dollars' worth to the United Kingdom. Here again the growth of Germany has been most noticeable, the exports to that country having increased almost fivefold within the last fifteen years.

The general nature of both imports and exports is indicated in Table 80, where the articles are grouped together into a few large classes for 1903, 1904, and 1905, and a comparison made with the annual average for 1899 to 1903, while detailed figures of both exports and imports in regard to the most important articles are shown in the statistical appendix, on pages 102 and 103. The brief summary strikingly emphasizes the fact that slaughterhouse products practically constitute the entire export trade of Uruguay, while consumption goods make up the bulk of the imports, such as food products, textiles (specified in the official classification of Uruguay as soft goods and materials), beverages, ready-made clothing, tobacco, and cigars. The considerable decline in the exports of slaughterhouse products in 1905 as compared with the preceding year is explained by the British consul as attributable to the diminution in amount of live stock as a result of the revolution of 1904, and the same explanation holds good in regard to the exports of live stock. On the other hand, the general improvement in the import trade may be accounted for by the necessity for restocking the market after nine months of civil war, while the increase in the imports of raw material and machinery is probably due to large undertakings, such as port improvements, electrification of street-car lines, etc. It must be remembered, however, that wool is classified in this schedule with the slaughterhouse products, and wool forms the bulk of the exports sent to France, Belgium, and Germany.

TABLE 80.—IMPORTS AND EXPORTS OF URUGUAY IN SPECIFIED YEARS, BY ARTICLES.[a]

[a] From British Diplomatic and Consular Reports, Annual Series, Nos. 3515 and 3735.

A study of this brief table brings out some interesting points in regard to the effect of the political disturbance upon the trade of Uruguay in 1904 and 1905. There was a great decrease in 1904 in the imports, and especially, since the manufacturing industries were most affected, in those of raw materials and machinery. On the other hand, the exports in that year were actually greater than in 1903, which might have led to the conclusion at the time that the conditions of production and export were not very much influenced by the political disturbances. However, the figures of 1905 demonstrate that the effect was no less noticeable in the export trade, except that it was felt somewhat later.

As regards the currents of trade, they differ considerably for different articles of export and import. The Uruguayan wool, as was stated above, goes mainly to France, Germany, and Belgium, these three countries having taken almost 90 per cent of the wool in 1904. On the other hand, the exports of meat, mainly the cheap article known as jerked beef, are principally to Brazil (over 80 per cent in 1903 and over 70 per cent in 1904). Hides and skins go to Belgium, France, and Germany, which three countries took about 75 per cent of the total exports in 1904, while the live stock of Uruguay, a rather inferior article, goes exclusively to Brazil.

In the imports from the United Kingdom textiles are of greatest importance, amounting to almost one-half of the total imports of textiles into Uruguay. These textiles consist mainly of cotton goods and smaller quantities of woolen and linen goods. Next in importance are the imports of coal, of which, according to the latest data, relating to 1903, 122,000 metric tons were imported. British coal constitutes about 90 per cent of the coal imported into Uruguay. Large quantities of manufactured steel and iron are also imported from the United Kingdom. In brief, textiles, coal, and iron and steel may be said to constitute almost 90 per cent of the imports from the United Kingdom. On the other hand, the bulk of the imports into Uruguay from the United States consists of entirely different goods, so that the United States and the United Kingdom can scarcely be said to be as yet competing in the Uruguayan markets. The imports from the United States consist of wood and its manufactures and mineral oils, these constituting over one-half of the imports from the United States, while the imports of textiles from the United States are stated to have been in 1903 over $100,000 worth. This item consists, primarily, of twine for harvesting machines and some sack cloth—that is, articles which are not to any extent brought from the United Kingdom. Again, from $100,000 to $150,000 worth annually of iron and steel manufactures is credited to the United States, composed mainly of fencing wire and agricultural machinery. The imports from Germany consist mainly of various manufactured articles, most important among which are textiles, foodstuffs, iron and other metals, etc. Among textiles the most important items are cotton knit goods and cloths and woolen goods. The foodstuffs imported from Germany consist mainly of spices and rice. Among the German iron and steel products barbed wire holds the first place. It is not surprising that live animals and foodstuffs (mainly raw sugar and potatoes) constitute about two-thirds of the imports from Argentina. Another important item is wood and its manufactures; but the imports of $40,000 to $50,000 worth of cotton goods from Argentina may appear somewhat surprising. Considerable quantities of woolen and silk goods and other textiles are also brought from Argentina, the total imports of textiles from that country amounting to about $1,200,000 in 1903, which may be taken as an indication of the rapid industrial development of that country and its possibilities as a competitor of the older industrial countries in the growing markets of South America.

The imports from France consist mainly of textiles, food products, beverages, glass and china ware, drugs and chemicals, and various other articles of manufacture. The textiles imported from France consist mainly of cotton, wool, and silk. More than half of all the silk imported into Uruguay comes from France, as compared with one-fourth of the wool and only one-tenth of the cotton goods, the cotton goods being mostly of the better qualities—lingerie, laces, etc. Of the food products imported from France, refined sugar constitutes more than half; the other large items are potatoes and chocolate. The beverages of French origin are mainly wine, also some cordials and cognac. The imports from Italy likewise consist primarily of textiles, food products, and beverages, the textiles being made up chiefly of cotton cloths and other cotton goods, the food products being olive and cotton-seed oil, rice, and fruits, while of the beverages over 80 per cent is common Italian wine.

These various statements may be summed up as follows: The Republic of Uruguay presents an active market for a great many products of manufacture, most of these being such the production of which has been rapidly developing in the United States, and in this market many European and even some South American industrial countries are actively competing with each other, while as yet the American manufacturer has not succeeded in acquiring a position of any great prominence, though signs of progress are not wanting. The imports from the United States showing the highest increases during the periods 1894–1898 and 1899–1903 are manufactures of iron and steel, cordage and twine, leather and its manufactures, paints, colors, etc., and paper and its manufactures. In the imports from the United Kingdom, large increases are shown in coal and coke, in manufactures of iron and steel, and in scientific instruments. The imports from Germany showing large increases are cotton and foodstuffs. The chief imports from Uruguay into the United States during the fiscal year 1907 were as follows: Hides and skins, $1,605,933; wool, $1,178,267, and hair, $107,110. The chief exports from the United States to Uruguay during the same year were: Mineral oils, $660,352; wood and its manufactures, $842,903; manufactures of iron and steel, $548,568, and agricultural implements, $126,927. Most of the commerce of Uruguay passes through the port of Montevideo, which is undergoing extensive improvements.

TARIFF.

Most of the rates in the Uruguayan tariff are ad valorem, coupled with a fixed value of merchandise under the valuation tariff, which makes them virtually specific. The tariff is a very detailed one, comprising more than 4,200 schedules.

VENEZUELA.

[Area, 593,943 square miles; population in 1903 estimated at 2,633,671.]

The total commerce of Venezuela during the fiscal year ended June, 1906, was $24,306,000, of which $8,676,000 were imports and $15,630,000 exports. Of the imports, 30.2 per cent was from the United States, and of the exports 31.1 per cent was sent to the United States. The official figures of the United States with ref-

erence to its trade with Venezuela show that the imports from that country declined from $10,966,765 in 1890 to $5,500,019 in 1900, and increased to $7,852,214 in 1907, and the exports thereto declined from $4,028,583 in 1890 to $2,452,757 in 1900, and increased to $3,024,629 in 1907, these being fiscal-year figures in all cases.

COMMERCE.

Commercial statistics of Venezuela are of a fragmentary nature, and very little can be ascertained in regard to the total trade for the period prior to the fiscal year ended June, 1903. On page 70, in the statistical appendix, a table will be found giving the value of the total imports into and exports from Venezuela since 1865 until the end of June, 1906, but many years for which no official data could be ascertained are missing, the most important break being between the fiscal years 1898 and 1903. It is seen that the total volume of trade, which had grown considerably until about 1890, began to fall off, under the influence of political conditions, and in 1898 both the imports and the exports were only one-half of what they were in 1891. For the last four years, however, fairly satisfactory data have been gathered, and in Table 81 the distribution of both the imports into and the exports from Venezuela for the four years ended June, 1906, are presented. But it must be pointed out that the data for 1903 do not include the very important ports of Ciudad Bolivar, Caño Colorado, and La Guayra, so that a comparison between that year and the subsequent year would be misleading. Taking the three latest years for which data are available, we find that both the imports and exports are still much smaller than they were fifteen or twenty years ago, the imports oscillating between 8 and 11 million dollars and being smaller in 1906 than they had been in 1904, while the exports are nearly double the imports

TABLE 81.—IMPORTS AND EXPORTS OF VENEZUELA, YEARS ENDED JUNE, 1903–1906, BY COUNTRIES.[a]

All other	116,000	43,000	63,000	75,000
Total	7,653,000	15,574,000	13,995,000	15,630,000

[a] Compiled from Memoria del Ministerio de Fomento, 1905, 1907.
[b] Exports for 1903 do not include ports of Ciudad Bolivar, Caño Colorado and Guiria.
[c] Includes all possessions.
[d] Not separately stated.

and yet 10 million dollars less than in 1891. The commercial conditions in Venezuela are especially important for the reason that both in imports and exports the United States occupies the first place, according to the data of the latest two years. The value of the imports into Venezuela from the United States has remained about the same for the last three years, and constituted 24.9 per cent in 1904, 29.5 per cent in 1905, and 30.2 per cent in 1906; the imports from the United Kingdom have decreased by over a million dollars, forming in 1906 but 29.8 per cent, as against 32.5 per cent two years earlier, and the imports from Germany have decreased over half a million dollars, while corresponding decreases have taken place in the imports from France, Spain, and other countries. In the case of the exports from Venezuela the shipments to the United States have increased by about $900,000 in the period from 1904 to 1906 and now constitute about one-third of the total exports, while those to France have in the same period decreased about a million and a half, and in 1906 represent 25.4 per cent of the total, as against 35 per cent in 1904. The Netherlands, including its colonies, comes third, taking 14.6 per cent in 1906, while Cuba alone took over $1,700,000, or 11 per cent, almost half a million more than the United Kingdom with all the British possessions. The trade between Venezuela and the United States seems, therefore, to be growing and full of promise for the future.

TABLE 82.—EXPORTS FROM VENEZUELA, YEARS ENDED JUNE, 1903–1906, BY ARTICLES.[a]

Total	7,653,000	15,574,000	13,996,000	15,630,000

[a] Compiled from Memoria del Ministerio de Fomento 1905, 1907.
[b] Not separately stated.

The exports from Venezuela, by articles, are shown for the last four years in Table 82. Coffee constitutes the most important item, amounting in some years to as much as one-half of the total exports, and cacao is second in importance. In addition, Venezuela exports large quantities of cattle and hides and skins, so that over 80 per cent of the exports consists of agricultural products. Balata gum is also exported in fairly large quantities. The exports of asphalt have been falling off since 1904. In 1906, the latest year for which statistics are available, coffee constituted 45.8 per cent, cacao 18.1 per cent, cattle 11.2 per cent, hides and skins 9 per cent, balata gum 4.5 per cent, and gold 3.6 per cent, and all other articles less than 8 per cent. The exports of coffee from Venezuela are of such importance that it was thought desirable to present the detailed statistics of that trade in a separate table.

All other countries	1,326,584	1,684,371	793,480
Total	125,581,170	86,949,455	94,369,146

A similar study of the imports into Venezuela from Venezuelan accounts presents many difficulties, the imports being stated as separate shipments from various countries into individual ports, and no data are obtainable for total imports either by countries of origin or by ports. In addition, the imports are stated in an extremely long and unclassified list of articles. Under these circumstances a brief statement of the imports of a few articles, constituting about two-thirds of the total imports, is all that is attempted

in Table 84. This table shows that cotton manufactures are the largest item of import and that various food products, such as wheat flour, rice, lard, and butter, are other important articles of import. The bulk of the cotton manufactures during the year came from the United Kingdom, while Germany and the United States contributed much smaller quantities. On the other hand, almost all the wheat flour, lard, and hams came from the United States. From Germany Venezuela bought in 1906 considerable quantities of rice, butter, cotton manufactures, drugs, and iron manufactures. The imports from the Netherlands consisted, as far as it was practicable to ascertain, of cotton manufactures and stearin. In view of the insufficiency of the data, the study of the tendencies of the foreign trade of Venezuela must be made from the data of the foreign countries which trade with it.

TABLE 84.—IMPORTS INTO VENEZUELA, YEAR ENDED JUNE 30, 1906, BY PRINCIPAL ARTICLES AND COUNTRIES.

ARTICLES.	Total.	United States.	United Kingdom.	Germany.	Netherlands.	France.	All other.
	Dollars.	*Dollars.*	*Dollars.*	*Dollars.*	*Dollars.*	*Dollars.*	*Dollars.*

Total	8,676,000	2,622,000	2,583,000	1,709,000	597,000	529,000	636,000

In Table 85 are shown the imports from Venezuela into five countries, namely, the United States, the United Kingdom, France, Germany, and Spain, according to the statistical reports of these countries, as well as the exports from those countries to Venezuela, for the calendar years 1890, 1895, 1900, and 1905. The totals obtained in this manner can not be claimed to represent with any degree of accuracy the total foreign trade of Venezuela, which has a more or less active trade with a few other countries, namely, the Netherlands, Cuba, and Italy. Nevertheless, a comparison of these totals for different years may serve as an indication of the trend of the foreign commerce of Venezuela. The table indicates a considerable falling off of trade during the last decade of the nineteenth century and only a moderate recovery since 1900, which has not yet resulted in the reestablishment of the older conditions. Thus the total trade with the five countries in 1890 amounted to 35 million dollars, in 1895 to less than 34 million dollars, in 1900 to only 22½ million dollars, and in 1905 to 24 million dollars. Between 1890 and 1900 the imports from Venezuela into all the countries mentioned decreased about 30 per cent, and the exports from these countries to Venezuela decreased considerably over 40 per cent. All the countries mentioned, except Spain, have suffered from this decline of the trade of Venezuela. Imports into the United States from Venezuela have fallen off about one-half, or from 11 million dollars in 1890 to 5½ millions in 1900 and 7 millions in 1905; those into the United Kingdom, from 1½ million in 1890 to 600,000 dollars in 1900 and about 1 million dollars in 1905; and those into France, from 7.7 millions in 1890 to 5.7 millions in 1900 and 3½ millions in 1905, while the imports from Venezuela into Germany and Spain meantime have actually increased. In the case of the exports, on the other hand, France was the greatest sufferer, losing almost her entire trade with Venezuela, which in 1890 amounted to 2¼ million dollars and in 1900 to less than half a million, while the other countries have suffered a loss of from 30 to 40 per cent.

TABLE 85.—IMPORTS FROM AND EXPORTS TO VENEZUELA OF FIVE SPECIFIED COUNTRIES, 1890, 1895, 1900, AND 1905.

COUNTRIES.	1890	1895	1900	1905
Imports from Venezuela into—	*Dollars.*	*Dollars.*	*Dollars.*	*Dollars.*
United States	10,966,765	10,073,951	5,500,019	7,109,850
United Kingdom	1,501,559	259,920	601,665	996,552
France	7,716,321	8,627,100	5,717,818	3,435,979
Germany	1,373,498	3,509,310	2,406,894	3,348,184
Spain	553,298	484,489	1,096,655	1,290,450
Total, 5 countries	22,111,441	22,954,770	15,323,051	16,181,015
Exports to Venezuela from—				
United States	4,028,583	3,740,464	2,452,757	3,213,575
United Kingdom	4,076,152	3,954,007	2,762,673	2,335,905

Germany	2,041,326	1,758,106	1,289,246	1,334,942
Spain	403,808	310,902	285,779	359,654
Total, 5 countries	12,786,844	10,812,070	7,226,442	7,990,600

On pages 117 and 127 to 129 will be found statements of the trade of Germany, France, and the United Kingdom with Venezuela, while a similar statement for the United States is found on pages 162 and 163, in the statistical appendix. The imports into France from Venezuela consist practically of two items only, namely, coffee and cacao, which make up about 90 per cent of the total imports. Other articles, in which the trade is of much smaller importance, are india rubber, pearls, cabinet woods, hides, and horns and hoofs. The imports into Germany consist also to a great extent of coffee and cacao, but india rubber is another very important article. Over 1,300,000 pounds of india rubber was imported in 1905, worth $1,136,000. In 1901 the value of the rubber imported from Venezuela was only $328,000, but the larger value of the imports was due mainly to the rise in price, the average valuation of the rubber imported being 400 marks per quintal (43 cents per pound) in 1902, and 800 marks per quintal, or just double the amount, in 1905. The United Kingdom differed from the other countries, inasmuch as it imported very little coffee or cacao, the bulk of its imports from Venezuela being made up of india rubber, ornamental feathers, and pearls. The imports into the United States from Venezuela consist mainly of coffee. The quantity imported was 45 million pounds in 1903, 54½ millions in 1905, and almost 63 millions both in 1904 and 1906, the value of the coffee imported in 1906 being $5,543,000, or 69 per cent of the total imports. In comparison with this the imports of cacao are very small, although growing rather rapidly. In 1903 they amounted to about 400,000 pounds and in 1906 to nearly 4½ million pounds, the value in the latter year being a little less than half a million dollars. Hides and skins represent a more important article of import, their value being in 1906 $1,560,000.

The statements of the exports from the countries mentioned to Venezuela are of necessity much more complex. Germany shows exports mainly of iron and steel manufactures and cotton manufactures. The exports from France are not very great, amounting in 1905 to a little over $600,000, but even this is a considerable improvement over the figures of 1902, which were only $150,000. These exports consist mainly of hardware, brushes, buttons, toys, cotton manufactures, and prepared medicines. Of the exports from the United Kingdom, over 70 per cent consist of cotton manufactures, and other textiles make up the bulk of the remainder. The United States exports to Venezuela were mainly wheat flour, cotton manufactures, iron and steel manufactures, illuminating oil, lard, butter, and smaller quantities of a large variety of other articles.

TARIFF.

The import tariff of Venezuela divides foreign merchandise into nine classes paying specific rates of duty as follows: (1) 5 centimes

of the bolivar per kilogram; (2) 10 centimes of the bolivar per kilogram; (3) 25 centimes of the bolivar per kilogram; (4) 75 centimes of the bolivar per kilogram; (5) 1 bolivar 25 centimes per kilogram; (6) 2 bolivars 50 centimes per kilogram; (7) 5 bolivars per kilogram; (8) 10 bolivars per kilogram; (9) 20 bolivars per kilogram.

Among the goods admitted free of duty are live animals, iron boiler plates, agricultural implements, barbed wire for fencing, Roman cement, printing papers and their accessories, certain kinds of machinery, iron bridges, etc.

WEST INDIES.

BRITISH WEST INDIES.

[Area, 12,032 square miles; estimated population in 1904, 1,698,581.]

The total commerce of the British West Indies in 1905–6, the latest year for which complete statistics are available, was $75,548,000, of which $40,177,000 were imports and $35,371,000 exports. Of the imports 31.6 per cent was drawn from the United States, and of the exports 35.8 per cent was sent to the United States. The official figures of the United States with reference to its trade with the British West Indies show that the imports from said islands have declined from $14,865,018 in 1890 to $11,894,520 in 1900 and $10,259,253 in 1906, but increased to $12,191,852 in 1907, and the exports thereto have grown from $8,288,786 in 1890 to $8,895,164 in 1900 and $10,755,139 in 1907, these being fiscal-year figures in all cases. Jamaica, Trinidad, and Barbados contribute over 50 per cent of the total trade of the British West Indies. The chief imports are cotton manufactures, articles of apparel, breadstuffs, and manufactures of iron and steel. The chief exports are sugar, sugar products, and fruits. The trade of the United States with the British West Indies consists mainly of imports of bananas, sugar, cacao, and asphaltum, and exports of breadstuffs, provisions, and manufactures of leather. The revenues and expenditures of the British West Indies for 1904 were $10,728,403 and $11,200,000, respectively. The total public debt in 1904 was $28,855,150.

Tables containing information in regard to the total trade of all the British West Indies combined will be found on page 71 in the statistical appendix. In the statements which follow, a brief analysis is made of the trade of the separate colonies into which the British West Indies are divided for administrative purposes. Such detailed treatment is considered necessary in view of the independent statistical records of the foreign trade which all these colonies publish.

BAHAMAS.

[Area, 4,404 square miles; estimated population in 1904, 57,146.]

The main occupations of the small population of this group of coral islands are fishing and the raising of subtropical fruits, such as pineapples and oranges. The exports are gradually increasing, and since 1901 have amounted to about a million dollars a year, as against $600,000 to $700,000 ten years ago. More than half of these exports consist of sponges, of which 1,400,000 pounds, valued at $514,000, were exported in 1904. Next in importance is Bahamas hemp, the production and exportation of which have rapidly increased within the last decade. In 1897, the first year in which these exports were specially recorded, the exports amounted to 900,000 pounds, valued at $22,000, and in 1904 the exports were 2,200,000 pounds, valued at $144,000. Among other articles of export may be mentioned pineapples, salt, and turtle shell. The annual imports have increased from less than a million dollars in the early nineties to a million and a half within the last two or three years, consisting mainly of wheat flour, rice, and other breadstuffs, meat products, sugar, coffee, alcoholic liquors, tobacco, and textiles. The trade of the Bahamas is mainly with the United States, which in 1904 took two-thirds of their exports and contributed three-fourths of their imports. The remainder of the imports was contributed mainly by the United Kingdom, while of the exports some quantities went to the United Kingdom, Germany, the Netherlands, and France. This distribution of the exports from the Bahamas is for the most part explained by the wide market for sponges, the other articles of export, such as hemp, pineapples, and other fruits, going almost exclusively to the United States. Practically all the food products except rice are contributed by the United States; while the United Kingdom sends to this colony certain manufactured articles, such as rope and textiles. Even in the latter, however, the United States occupies the first place.

BARBADOS.

[Area, 166 miles; estimated population in 1904, 199,514.]

The staple product of this small island, as of most other West Indian islands, is sugar, the production of which developed under slavery conditions and has continued since the abolition of slavery in very much the same fashion with hired labor. Under the influence of the competition of subsidized European beet sugar, the industry passed through a severe crisis in the middle of the last decade of the nineteenth century, from which, however, it is gradually recovering. The total value of exports was over 5 million dollars in 1890 and 1893, but fell below 3 millions in 1895, reached 4.6 millions in 1901, was less than 3 millions in 1903, and about 4 millions in 1904. The total value of exports followed closely the fluctuations in both the quantity and value of the sugar exported, which, in recent years, constituted from three-fifths to two-thirds of the total exports. The bulk of the remainder consists almost exclusively of molasses; the exports of all other articles amounted, in 1904, scarcely to $200,000, or about 6 per cent of the total exports. The quantity of sugar exported is subject to very marked fluctuations, and amounted during the five years 1901 to 1905, inclusive, to 123 million pounds, 101 million pounds, 71 million pounds, 123 million pounds, and 92 million pounds, respectively. The total value of imports is more uniform, amounting to about 5 million dollars annually, though during the earlier years of the period under discussion they occasionally reached 6½ million dollars. The imports are made up mainly of breadstuffs, such as wheat and rye flour, valued at $334,000 in 1905, dried fish, meat products, rice, alcoholic liquors and tobacco, lumber, staves and shooks used for barrels containing sugar, etc., cotton and other textiles, boots, shoes, etc. The exports of Barbados are destined chiefly for the United States, which, in 1904, took about 45 per cent of the total, while British North America took 33 per cent and the United Kingdom less than 10 per cent. A little less than half the imports came from the United Kingdom, about one-third from the United States, and most of the remainder from Canada and from the other British West Indies. More than half the sugar exported goes to the United States, about one-third to Canada, and the rest to the United Kingdom, while about 80 per cent of the molasses goes to Canada and Newfoundland. The respective positions of the countries from which Barbados imports its goods for immediate consumption are about the same as in the case of most other West Indian islands—that is, it buys almost all of its flour, grain, meat products, mineral and vegetable oils and oil cake, and also a small part of its textiles from the United States, while the greater share of its textiles and most other manufactured articles come from the United Kingdom. British India figures in the import trade of Barbados mainly in supplying rice, a large quantity of which is consumed by the laborers on the sugar plantations.

BERMUDA.

[Area, 19 square miles; estimated population in 1904, 20,206.]

The little island of Bermuda, with the numerous little islets surrounding it, has a foreign trade that is quite considerable in view of its small population. In 1905 the total trade amounted to $3,415,000, of which the imports equaled $2,644,000 and the exports only $771,000. Almost one-half, or 48.8 per cent, of the imports came from the United States, and 91.7 per

cent of the exports went to the United States. This large excess of the imports over the exports, which is not compensated by any recorded exports of gold, seems to suggest that the main economic function of Bermuda is to serve as a winter health resort for foreigners, principally Americans, and that these and the military stationed in the island are the main consumers of the large quantity of goods imported. The exports consist of onions, which in 1904 constituted $361 000, or over 60 per cent of the total; potatoes, $127.000, or 22 per cent, and lily bulbs. The imports are made up mainly of foodstuffs, such as cattle, flour, groceries, meats, dairy products, sugar, vegetables, etc., and fairly large quantities of spirituous liquors, tobacco, and textiles for consumption by the local population. In addition to the United States, the United Kingdom and Canada are the only two countries supplying large quantities of goods to Bermuda. In 1904, the latest year for which full figures are available, the United States furnished 46.6 per cent, the United Kingdom 36.9 per cent, and Canada 13.6 per cent, leaving only 3 per cent for all other countries. From the United States Bermuda bought more than one-half of its flour, about one-third of the cotton goods, all its corn, one-fourth of the oats, most of the hardware and cutlery, most of the manufactured leather, and almost all its cattle, sheep, and lumber, all its meat, all its oil, and most of the provisions. The United Kingdom supplied two-thirds of the cotton goods, most of the ready-made clothing, almost all the woolen goods, and all the spirituous liquors. Canada sent fish, some flour, three-fourths of the oats, more than half of the hay, and smaller quantities of provisions and vegetables.

For further statistical information, the reader is referred to pages 80, 105, and 106.

GRENADA.

[Area, 133 square miles; estimated population in 1904, 68,253.]

The island of Grenada has shown greater commercial prosperity in recent years than certain others of the West Indies, its variety of production having rendered it less dependent upon the sugar industry than many others of those islands. The exports, though declining in the middle of the nineties, have in recent years shown a tendency to grow, and, after reaching a minimum of $746,000 in 1897, gradually increased to $1,552,000 in 1904. They consist almost exclusively of cacao, of which over 13 million pounds were exported in 1904, valued at $1,325,000, or 85 per cent of the total, the bulk of the remainder being contributed by nutmegs and other spices. Cotton is regularly being exported from this island, though its quantity is small and does not show any increase. In 1892 the cotton exported amounted to 489,000 pounds, but during the decade ended 1904 the exports averaged less than 300,000 pounds. About two-thirds of the total exports are sent to the United Kingdom, about 20 per cent to the United States, and 15 per cent to France.

For further information see pages 80 and 106.

JAMAICA.

[Area, 4,207 square miles; estimated population in 1904, 803,838.]

This is the largest single island in the group of British West Indies, and its population constitutes almost half of that of the entire group. According to the latest census, that of 1891, there were only 14,692 white persons out of a total of 639,491, or 2.3 per cent. Sugar and coffee, produced on large plantations, were the mainstay of the economic life of this island in the days of slavery, but the liberation of the slaves led to the breaking up of the large estates into small land holdings, and many crops for home consumption were substituted for these export crops. The foreign trade of this island does not show any tendency to increase, and in fact the imports have as a rule been smaller in recent years than in the beginning of the fifteen-year period for which statistics are presented on pages 80, 81, and 107. The total volume of the exports is subject to great fluctuations, as is to be expected where the bulk of the exports consists of agricultural products subject to crop variations. The total value of exports as well as of imports is from 8 to 10 million dollars per annum, the total value of the trade being from 16 to 20 million dollars a year. In the fiscal year 1905, the latest for which complete data are presented, both the exports and the imports were considerably smaller than for the previous years, and the total value of the trade was $15,178,000 as against $17,314,000 in the preceding year.

The exports consist almost exclusively of agricultural products and a few simple manufactured articles directly derived from them, namely, cacao, coffee, fruits and nuts, spices and extracts, sugar and rum, tobacco and its manufactures, wood and timber, the articles not here enumerated amounting to less than 4 per cent of the total exports. But in the comparative importance of these articles considerable changes have taken place even within the last fifteen years. In 1891 the total exports amounted to $8,869,000, and of this, raw sugar represented $1,149,000, or 13 per cent; coffee $1,381,000, or 15.6 per cent; bananas $2,162,000, or 24.4 per cent; logwood $1,861,000, or 21 per cent, and rum $969,000, or 11 per cent. In other words, the main articles of export were, in their order of importance, bananas, logwood, coffee, sugar, and rum, these five articles constituting 85 per cent of the total exports. Since that time the exports of sugar have been constantly decreasing, from 42 million pounds in 1891 and 48 million pounds in 1892 to 22 million pounds in 1905, worth $566,000, or less than one-half of the value of the sugar exports fifteen years earlier. The exports of logwood have decreased from 109,000 tons to less than 30,000 tons during the same period, and their value has dropped to $368,000, or about one-fifth of their value fifteen years ago. The exports of coffee have decreased from 8 to 10 million pounds in the earlier years of this period to less than 6 million pounds in 1905, and because of the fall in the price of coffee the total value of the coffee exports has fallen off much more, namely, from $1,381,000 to $414,000, or to less than one-third. The exports of rum have also decreased from nearly 1.6 million gallons, valued at $970,000, in 1891, to 1.2 million gallons, valued at $450,000 in 1905. As against this decline in the exports of sugar, rum, logwood, and coffee, there was a compensating increase in the exports of other articles, namely cacao, bananas, oranges, spices, logwood extract, and tobacco, thus indicating a considerable diversification of the crops. Within this period the exports of cacao increased from 700,000 pounds to 2,600,000 pounds, and in value from $70,000 to $198,000. The exports of bananas increased from less than 5 million bunches to nearly 9 million bunches, though because of the fall in the price of bananas the value has not shown a corresponding increase. The number of oranges exported increased from 40 millions to 73 millions and in 1900 was even as high as 107 millions. The exports of ginger and of pimento have nearly doubled. There has been a rapid increase in the exports of logwood extracts since 1895, when they were first mentioned, and in 1905 they amounted to $310,000, thus compensating to some extent for the decline in the exports of logwood. Exports of tobacco and cigars have increased fourfold.

The imports into Jamaica consist mainly of breadstuffs, such as wheat flour, corn and bread, dried fish, meat and dairy products, rice, malt liquors, textiles, and dry goods. Among the signs of the economic development of Jamaica may be pointed out the increase in the imports of coal and coke from 46,000 tons in 1891 to 87,000 tons in 1905, and of petroleum from 600,000 to 765,000 gallons in the same period. On the other hand, notwithstanding the increase in population, the imports of breadstuffs and dried fish and rice have not shown any increase, thus indicating a growth in the production of foodstuffs in the island itself. Both in the imports and the exports the largest share of the trade of Jamaica is divided between the United States and the United Kingdom. Of the exports, more than one-half usually go to the United States and about 20 per cent to the United Kingdom, the rest being divided between Canada, the British West Indies, France, Germany, and Austria-Hungary. Of the imports, about 40 per cent each come from the United Kingdom and the United States, while the bulk of the remainder comes from Canada. In 1906, the latest

year for which detailed figures are available, the exact shares of the trade were as follows: The exports of produce of Jamaica to the United States were 57.2 per cent of the total exports, to the United Kingdom 21.5 per cent, to Canada 7.5 per cent, to France 5.4 per cent, to Germany 1.8 per cent, and to all other countries 6.6 per cent. Of the imports into Jamaica during that year, 38.2 per cent came from the United States, 49.8 per cent from the United Kingdom, 8.2 per cent from Canada, and only 3.8 per cent from all other countries. To the United States are shipped almost all the bananas, two-thirds of the oranges, half of the cocoanuts, small quantities of cacao, coffee, logwood extract, spices, and logwood, very little sugar, and almost no rum or tobacco. The United Kingdom takes a large share of the cacao and coffee, some bananas and oranges, more than three-fourths of the rum, and some sugar, tobacco, spices, etc. Most of the raw sugar goes to Canada, while most of the coffee goes to continental Europe. To the market of Jamaica the United States contributes mainly food products, practically all the beef, all the bread, a good share of the butter, most of the cheese, a considerable share of the fish, almost all the flour and meal, all the corn, oats, and pulse. Certain classes of manufactured articles are also bought mainly in the United States, such as bicycles, boots and shoes, carriages, drugs and medicines, furniture, hardware and cutlery, wire fencing, nails, lamps, printing paper, and perfumery. From the United Kingdom are obtained most of the textiles and a great many other manufactured articles. Thus, in 1905 the United Kingdom shipped about nine-tenths of all the clothing, bags and sacks, beer, ale, and porter, books, and cement, two-thirds of the cordage, about 80 per cent of the cotton manufactures, and the earthen and china ware, more than half of the glass, over 90 per cent of the haberdashery and millinery, two-thirds of the hardware and cutlery, almost all the hats and caps, and galvanized iron for roofing, four-fifths of the machinery, almost all the linen manufactures, four-fifths of the agricultural machinery and writing paper and stationery, all the locomotives, almost all the silk manufactures, soap, spirits, tin, and cigarettes, and all the woolen manufactures. Most of these are articles the production of which in the United States has grown very rapidly within the last few years, and a larger share of the trade of Jamaica may be obtained by the American manufacturer in the future.

LEEWARD ISLANDS.

[Area, 701 square miles; estimated population in 1904, 132,400.]

The colony of Leeward Islands consists of a number of small islands in the British West Indies, of which the most important are Antigua, St. Christopher, Nevis, Dominica, and the Virgin Islands. In 1905, the latest year for which data are available, the total commerce was equal to $3,948,000, almost equally divided between imports and exports. Of the exports, only 10 per cent went to the United States, but of the imports 37.8 per cent came from this country. The decline of foreign commerce is noticed in the case of this colony not less than in that of many other British West Indian colonies. In the early nineties the exports equaled about 2½ million dollars, but in 1903 they had fallen to $1,300,000, the imports being only a little larger. Sugar is the mainstay of the economic life of this colony and constituted in the early nineties almost 90 per cent of its exports, but only 67 per cent in 1904. There has been some decline in the quantity of sugar exported, which in 1890 amounted to almost 83 million pounds and in 1900 to only 34½ million pounds, after which there was some recovery, so that the exports in 1904 amounted to 55 million pounds. But hand in hand with this decline in quantity there has been a continuous decline in price, so that the total value of sugar and molasses exported fell off from $2,300,000 in 1892 to $1,100,000 in 1904. As a partial compensation for this loss, there has been a considerable increase in the exports of cacao and fruits, mainly limes. In 1890 the exports of cacao amounted to only 400,000 pounds, while for the last five years they averaged over a million pounds, and the increase in value was still greater because of a rise in the price of cacao, namely, from $35,000 in 1890 to $102,000 in 1904. The increased demand for limes stimulated the exports of that fruit, which amounted to $80,000 in 1890 and $175,000 in 1904. Within the last two years exports of cotton have again appeared, after the production of cotton had been practically abandoned for many decades, but thus far these new products have not enabled the colony to regain the economic position it held in the past. The imports into Leeward Islands have likewise been smaller within recent years than some ten or fifteen years ago, averaging within the last three years about $1,800,000. In 1904 the main articles of import were wheat flour, $234,000; cotton manufactures, $201,000; haberdashery and millinery, $162,000, and machinery for sugar manufacture, $113,000. Other articles of some importance, are corn meal and flour, fertilizers for use in cane sugar cultivation, dried and pickled fish, meat products, rice, etc. The entire trade is practically dominated by three countries, namely, the United Kingdom, Canada, and the United States. Of the imports in 1904, 45.2 per cent came from the United Kingdom and 37.1 per cent from the United States, while of the remainder, 11.2 per cent came from British North America and the surrounding British West Indian islands, and only 7.4 per cent from all the other foreign countries. Of the total exports, more than half went to Canada, about one-fourth to the United Kingdom, and about 17 per cent to the United States, leaving less than 8 per cent for all the other countries. Most of the sugar shipped from Leeward Islands goes to Canada; only small portions are sent to the United States and the United Kingdom. The same is true of molasses, while, on the other hand, the United Kingdom is the main purchaser of cacao and limes. The United Kingdom supplies to the Leeward Islands almost all their imports of cotton manufactures, haberdashery, hardware, leather and saddlery, machinery for sugar making, fancy goods, paper, soap, spirits, etc. From Canada are imported dried and pickled fish and manufactures of wood. The United States supplies almost all the beef, pork, bacon, wheat flour, grain, corn meal, bread, oleomargarine, oil cake, and tobacco.

Further information in regard to the foreign trade of Leeward Islands may be obtained by referring to pages 81 and 108.

ST. VINCENT.

[Area, 133 square miles; estimated population in 1905, 49,256.]

The little island of St. Vincent, 95 per cent of whose population is colored, shows the results of economic depression due to the unsatisfactory condition of the world sugar market even more strongly than the larger islands. The exports from St. Vincent amounted to $572,000 in 1892 and to only $248,000 in 1904. The imports were $501,000 in 1892 and $361,000 in 1904. The value of the raw sugar exported in 1890 was $258,000 and in 1904 only $48,000. Arrowroot is now the main product of the island for export purposes, but even the exports of this article show a slight tendency toward decline. The imports consist mainly of textiles, breadstuffs, rice, and smoked fish and similar articles. The currents of trade are mainly with the United Kingdom and the other British West Indies. These two share about equally in the entire exports and supply each about 40 per cent of the imports. Less than $10,000 worth was exported to the United States for the year ended March, 1905, while the imports from the United States amounted to $74,000, wheat flour and pine lumber being among the most important articles.

See tables on pages 81 and 110 for further trade statistics.

ST. LUCIA.

[Area, 233 square miles; estimated population in 1904, 52,682.]

The foreign trade of the island of Santa Lucia is not large. The exports from the island amounted in the nineties to over $600,000 and have fallen to from $300,000 to $400,000 in the last few years, though they showed a sudden increase in 1905, the latest year for which trade figures are available, amounting to $837,000 as against

$431,000 the preceding year. The main exports are raw sugar and crude cacao, the decline having taken place chiefly in raw sugar, which amounted to over $400,000 in the early nineties and only $127,000 in 1902; in 1904, the sugar exports again increased to $262,000, while in 1905 they were but $220,000. The changes in the value of the sugar exports are due more to fluctuations in price than in quantity exported, which latter is rather uniform, being usually between 8 and 10 million pounds annually. The imports are much larger than the exports, amounting to between 1½ and 2 million dollars. An interesting peculiarity of the import trade is the large quantity of coal imported, chiefly for the sugar industry and bunkering purposes. The other important items are building materials, textiles, cattle, haberdashery, etc. The mother country absorbs more than half of the island's exports, taking most of its sugar. Over 25 per cent of the exports go to France, which buys almost all of its cacao. Hardly any of the products of Santa Lucia go to the United States. On the other hand, this country supplies a considerable share of the imports into Santa Lucia, which in 1904 amounted to 23 per cent, while the United Kingdom supplied 65 per cent. The shipments from the United States to Santa Lucia consist mainly of coal and provisions, while the United Kingdom supplies almost all the manufactured articles.

Detailed statements of the foreign trade of this colony, both by countries and by articles, may be found on pages 81 and 109.

TRINIDAD AND TOBAGO.

[Area, 1,869 square miles; estimated population in 1904, 310,000.]

This colony consists of the island of Trinidad, with an area of 1,755 square miles and a population of 290,000, and the smaller island of Tobago, with an area of 114 square miles and a population of 20,000, the two islands having been joined into one colony in 1899. In the tables of trade of this colony by articles and countries, which may be found on pages 82 and 110, in the statistical appendix, the data for the last five years are for the combined foreign trade of both islands, exclusive of the trade between the two islands. For the years preceding 1899 the data of both imports and exports are for Trinidad alone.

While constituting a part of the group known as the British West Indies, both islands are located in close proximity to the Venezuelan coast and their natural resources are similar to those of other countries of the northern part of South America. The products of Trinidad and Tobago may be seen from the statistics of the exports of the colony. In the early part of last century coffee was the main source of prosperity of those islands, but since then the production of coffee has been almost abandoned and sugar plantations substituted. The sugar industry, which was developed under conditions of slave labor imported from the northern part of the West Indies, has been preserved in Trinidad to a greater extent than in those latter islands, and is kept up at present largely by contract labor of Indian coolies under conditions very similar to those of British Guiana. In addition to the sugar industry, within the last fifteen years there has been a notable growth in the production of cacao. The only other industry worth mentioning is the asphalt industry, Trinidad having very rich asphalt lakes, as has also Venezuela, of which Trinidad is, geologically, a part.

The exports from Trinidad and Tobago have shown a healthy increase during the last fifteen years, averaging from 6 to 7 million dollars annually in the last decade of the nineteenth century and reaching 15 million dollars during the fiscal year ended March, 1906. The exports of sugar have varied in quantity much less than in value, the explanation being found in the fluctuation of the price of sugar. Thus, throughout the fifteen years for which data are given the exports of sugar have never fallen below 90 million pounds annually and only once have exceeded 120 million pounds, while the value of the sugar exported has fluctuated between 2 and 3½ million dollars. On the other hand, the exports of cacao show an almost continuous rise both in quantity and value. In 1894 they amounted to 16 million pounds, worth $2,140,000, and in the fiscal year 1905 they were over 40 million pounds, worth $4,300,000. The exports of asphalt, at the beginning of the period under discussion, were rather less than 100,000 tons annually, worth about half a million dollars, and during the latest years they have increased to 150,000 tons, and even more, reaching the highest point in 1903, when they amounted to 192,000 tons, worth $993,000.

The imports into Trinidad are regularly greater than the exports by several million dollars. There is not a single year in the entire period under discussion during which they have fallen below 10 million dollars, the figures for the fiscal year 1906 being in excess of 16 million dollars. The explanation of this peculiarity must be sought in the statistical methods of the reports of the foreign trade rather than in the economic conditions of the colony. The island of Trinidad, because of its proximity to Venezuela, evidently serves as a transshipment point both for goods exported from Venezuela as well as for goods imported from Europe and destined for Venezuela, and while an effort has been made, since 1897, to state transshipments separately, this intention has not been carried out manifestly with any degree of success, as may be judged from the fact that the report for the fiscal year 1905 shows imports for consumption of over 7½ million pounds of cacao from Venezuela, though there can be no doubt that a large part of these imports were destined not for consumption but for reexportation. This qualification should be kept in mind in a study of the tables. In general it may be stated that the nature of the imports is about the same as shown above in the study of the South American countries. The imports consist mainly of wheat, flour, and other breadstuffs; meats, dried fish, and other provisions; wines, liquors, tobacco, large quantities of textiles, boots and shoes, and similar articles of personal consumption.

The trade of Trinidad is distributed among a very small number of countries, the most important ones being the mother country (United Kingdom), the United States, the neighboring country of Venezuela, and British North America. In the fiscal year 1905, the latest year for which accurate data are available, over one-third of the exports of domestic production went to the United Kingdom, over one-fourth to the United States, about 20 per cent to France, and 13 per cent to British North America, leaving only about 5 per cent for all the other countries. In addition, $1,818,400 worth of goods which were described as the produce of other countries were exported. These goods went mainly to the United States, Venezuela, France, and the United Kingdom, thus indicating shipments both to and from the South American continent. The records of transshipment included only goods to the value of $1,208,500, being mainly imports from Venezuela shipped to the United Kingdom and the United States. On the import side, the trade of Trinidad was somewhat more variegated, the imports from the United Kingdom during 1905 being a little less than 40 per cent of the total, the imports from the United States constituting 26.7 per cent, from Venezuela 14.6 per cent, from British North America about 5 per cent, with smaller quantities from Germany, France, British West Indies, and a few other countries.

The sugar exported from Trinidad goes mainly to the United Kingdom and to British North America, very small quantities of it reaching the United States. Most of the cacao goes to France and the United States and some to the United Kingdom, while of the asphalt two-thirds is bought by the United States and the rest divided between Germany and the United Kingdom.

The United States supplies to the markets of Trinidad mainly breadstuffs, such as wheat flour, corn, and oats; meat, provisions, live animals, considerable quantities of coal, and only small quantities of manufactures, such as hardware, boots and shoes, patent medicines, paper and stationery, soap, etc. From Canada Trinidad purchases fish and oats, while the bulk of the manufactured articles comes from the United Kingdom, which country occupies a commanding position in the imports of malt liquors, bicycles,

books, candles, cement, confectionery, cordage and twine, furniture, hardware and structural iron, jewelry, boots and shoes, saddlery, machinery, prepared medicines, condensed milk, painters' colors, paper and stationery, patent fuel, rails and rail material, soap, alcoholic liquors, textiles, ready-made clothing, etc. This long list, it will be observed, consists mainly of articles in the production of which the United States occupies a very high position, and it is but reasonable to expect that when the general difficulty spoken of in the introduction to this study will have been overcome the American manufacturer will be able to command a greater share of the market in question.

TURKS AND CAICOS ISLANDS.

[Area, 166 square miles; estimated population in 1904, 5,300.]

The population of this small colony is occupied mainly in the fishing industry. Its foreign trade is insignificant. The exports amounted in 1904 to $117,000, against $200,000 in 1897, the highest figures ever reached. They consist mainly of salt, though during the last decade exports of sisal grass assumed some dimensions. The imports are likewise small, averaging $144,000 annually during the last four years, and consist mainly of breadstuffs and other provisions. The trade of Caicos is mainly with the United States, to which it sent, in 1904, 82 per cent of its total exports, and from which it purchased 62 per cent of its total imports.

DANISH WEST INDIES.

[Area, 138 square miles; population in 1901, 30,527.]

The Danish West Indies consist of the islands of St. Thomas, St. Croix, and St. John. The imports and exports of St. Croix for 1904–5 were $885,800 and $483,700, respectively. The imports into St. Thomas and St. John for the same year amounted to $907,100, bringing the total imports into the colony up to $1,792,900, but the exports within the last decade from the two latter islands can not be ascertained. The imports have grown considerably, while the exports from St. Croix have been declining. These consist mainly of sugar and small quantities of sugar by-products, such as molasses and rum. The quantity of sugar exported fluctuates between 20 and 30 million pounds annually, and does not show any tendency toward a permanent decline, as the decrease in the value of exports may be explained by a fall in sugar prices. Almost all the sugar exported goes to the United States. The exports from the United States to the Danish West Indies during 1890 amounted to $794,273, in 1900 to $624,524, and in 1907 to $777,577, and the imports from the Danish West Indies into the United States in 1890 were $588,739; in 1900, $568,935, and in 1907, $440,855, consisting almost entirely of sugar. The chief exports from the United States to the islands are breadstuffs and coal. The trade with Denmark is small. The imports into Denmark from the islands in 1904 amounted to $30,000, and the exports from that country to the islands were less than $7,000.

TABLE 86.—EXPORTS OF SUGAR, MOLASSES, AND RUM FROM ST. CROIX, 1896–1905.

FISCAL YEAR.	Sugar.	Molasses.	Rum.
	Pounds.	*Gallons.*	*Gallons.*
1896	21,453,785	275,999	103,356
1897	28,057,835	202,949	85,512
1898	27,856,679	87,802	79,480
1899	25,935,010	69,186	71,097
1900	26,387,779	90,591	42,345

1903	34,709,480	37,545	99,946
1904	23,331,274	54,896	45,810
1905	27,712,849	94,509	67,088

DUTCH WEST INDIES (CURAÇAO AND DEPENDENCIES).

[Area, 403 square miles; population in 1902, 53,046.]

The colony of Curaçao consists of the islands of Curaçao, Bonaire, Aruba, a part of St. Martin, St. Eustache, and Saba. The trade of this group of small islands is inconsiderable. The imports for the years 1901 to 1905 are shown in Table 87, the data anterior to 1901 being incomplete. The imports into Curaçao have increased from $875,000 in 1901 to $1,540,000 in 1905, but these were intended largely for Venezuela. A record of exports is only obtainable since 1903, when they amounted to $200,000, increasing to $343,000 in 1904 and $386,000 in 1905. These exports consisted largely of straw hats, of which almost 90,000 dozen were exported in 1905, valued at $135,000. Other articles exported were salt, hides and skins, divi-divi, and phosphorous lime. The exports from the United States to the Dutch West Indies were $832,808 in the fiscal year 1905, $751,453 in 1906, and $711,141 in 1907, while the imports from the Dutch West Indies into the United States increased from $193,309 in 1905 to $356,071 in 1907. These imports consisted of hides and skins, drugs and dyes, and woods, and the total value seems to be equal to the total value of exports from the Dutch West Indies.

TABLE 87.—IMPORTS INTO CURAÇAO AND DEPENDENCIES, 1901–1905, BY ARTICLES.

FRENCH WEST INDIES.

[Area, 1,160 square miles; population, 392,140.]

The total commerce of the French West Indies in 1904, the latest year for which complete statistics by countries are available, was $10,329,000, of which $5,452,000 were imports and $4,877,000 exports. Of the imports 35 per cent was drawn from the United States, and of the exports only $11,000 worth was sent to the United States. The official figures of the United States with reference to its trade with the French West Indies show that the imports from these islands were $128,997 in 1890, $30,176 in 1900, and $41,019 in 1907; and the exports thereto, which were $1,792,612 in 1890 and $1,867,168 in 1900, decreased to $1,422,025 in 1907, these being fiscal-year figures in all cases.

GUADELOUPE.

[Area, 722 square miles; estimated population in 1903, 182,000.]

The total commerce of Guadeloupe in 1904 amounted to a little less than 5 million dollars, nearly equally divided between exports and imports. The United States has practically no share in the export trade of Guadeloupe, but of the imports 34.4 per cent came from the United States. The foreign trade of Guadeloupe does not show any tendency toward increase, the exports fluctuating between 2½ and 3½ million dollars and the imports being usually a little larger, or from 3 to 4 million dollars. The figures for 1904, which are the latest available, are considerably below the normal amount of trade, which is probably due to a short crop and the low price of sugar.

The little double island of Guadeloupe has specialized in the production of a few tropical commodities, which are, however, of universal consumption, namely, sugar and its by-product rum, coffee, and cacao. Sugar constitutes about two-thirds of the exports—coffee, cacao, and rum being the only other items figuring prominently in the export statistics of the colony. Together these four articles made up over 97 per cent of the exports in 1905. The exports of coffee show but little development. In 1896 they amounted to about 1,462,000 pounds and in 1905 to 1,829,000 pounds. On the other hand, the exports of cacao have almost doubled within the same decade, increasing from 873,000 pounds to 1,400,000 pounds. Practically the entire exports of Guadeloupe are shipped to France, where the colonial cacao, coffee, and sugar are given preferential treatment in the tariff. In 1904, 96.5 per cent went to France and 3.2 per cent to French colonies, leaving less than 1 per cent for exportation to foreign countries.

With its sugar, rum, coffee, and cacao Guadeloupe buys a large variety of articles for immediate consumption, and the total volume of its imports seems to be quite dependent on the fluctuation of its purchasing power. The main articles of import are foodstuffs, those for 1904 including wheat flour, $288,000; rice, $230,000; codfish, $164,000; wine, $151,000; all breadstuffs except wheat flour, $66,000; salted meats, $63,000, and smaller quantities of lard, butter, cheese, and vegetables. Of all other articles of import not intended for food consumption, the most important are textiles, such as cotton manufactures, $180,000. As Guadeloupe admits French products free of duty, almost one-half of its imports come from France, primarily textiles, wines and liquors, and various manufactures; but most of its food products must be obtained from the United States, from which it buys almost all of its salted meats, lard, butter, cotton-seed oil, timber, and lumber.

Detailed statements of the trade of Guadeloupe, both by countries and by articles, are given in the statistical appendix, on pages 83 and 113.

MARTINIQUE.

[Area, 380 square miles; estimated population, 203,780.]

The foreign commerce of the island of Martinique has shown a marked decline since the beginning of the eighties. In 1882 it amounted to over 13 million dollars and in 1905 it was only $5,952,000, of which imports were $2,877,000 and exports $3,075,000, the decline being almost equally divided between exports and imports. This falling off of the trade was due to a decline in the sugar industry, reflecting the general condition of the sugar market, resulting from the competition of beet sugar with cane sugar. Even within recent years the exports of raw sugar have fallen off from 76 million pounds in 1896 to 52 million pounds in 1904, though the year 1905 showed some improvement. In addition to the falling off in the quantity of sugar exported, the fall in the price was also a factor in reducing the total value of the exports, and, as a consequence, the total value of the imports. The exports of rum have fallen off from 4½ million gallons in 1896 to less than 2 million gallons in 1904, partly because of the general reduction in the sugar industry and partly, perhaps, because of the decline in the demand for that particular spirituous liquor. Ninety-eight per cent of the exports of Martinique in 1905 were shipped to France, and only about $4,000 worth, or scarcely more than one-tenth of 1 per cent, consisting of raw sugar, to the United States.

About twenty-five years ago the imports from Martinique into the United States were quite considerable, amounting to 2 or 3 million dollars, and consisted mainly of raw sugar, but in 1884 this trade began to fall off very rapidly and in five years was reduced to practically nothing.

Besides sugar and rum, small quantities of cacao, varying from 700,000 to 1,500,000 pounds annually, are exported to France.

The imports of Martinique during the last five or six years of the nineteenth century amounted to 4½ to 5 million dollars annually, but since 1901 have shown a tendency to decline rapidly. In 1901 they amounted to $5,200,000, in 1903 to $3,900,000, and in 1905 to $2,800,000. In this import trade the predominance of the mother country is less pronounced, the imports from France usually representing about one-half of the total, while the United States occupies the second place. In 1905 the imports from France constituted 53.7 per cent and those from the United States 34.5 per cent of the total. The main articles of import are wheat flour, coal for use in the sugar industry, cotton manufactures, fish, spirits and wines, and various meat provisions. From the United States are imported most of the meat products, coal, wheat flour, and other grains and grain products, and all the cotton-seed oil, timber, and lumber, while the mother country supplies most of the imported preserved fish, some wheat flour, rice, practically all the alcoholic liquors, and most of the manufactured products such as textiles, ready-made clothing, paper manufactures, leather manufactures, metal manufactures, etc.

Detailed statements of the foreign trade of Martinique, both by countries and by articles, are given in the statistical appendix, and will be found on pages 83, 113, and 114.

PORTO RICO.

[Area, 3,435 square miles; estimated population, 1,000,000.]

Porto Rico is situated east of the island of Haiti and west of the islands of St. Croix and St. Thomas. Its area is 3,435 square miles (about half the size of New Jersey), and its population in 1904 was estimated at 1,000,000 (61.8 per cent white and 38.2 per cent colored), or 291 persons to the square mile, a density far in excess of the average of the United States (26) and greater than that of any American State except Massachusetts (349) and Rhode Island (407). The dominant and almost exclusive industry of Porto Rico is agriculture. Formerly coffee was by far the most important product. According to the census of 1899, 41 per cent of all the cultivated land was devoted to coffee, 15 per cent to sugar cane, 14 per cent to bananas, 8 per cent to sweet potatoes, 4 per cent to Indian corn, 2 per cent to malangas, 2 per cent to rice, 1 per cent to cocoanuts, and 1 per cent to tobacco. Thus the coffee area at that time was nearly three times the sugar area, and the value of the products bore about the same relation. Since then the relation has been largely reversed. In 1907 of the entire exports of the island, amounting to $26,996,300, sugar constituted 54.7 per cent, coffee 17.4 per cent, and tobacco 4.2 per cent. The crisis in the coffee industry which brought about this reversal was due to overproduction induced by previous high prices, partial loss of the Spanish market, owing to the imposition of high duties, partial loss of the French market for a similar reason, the change in the money standard, and the hurricane of August 8, 1899. The hope that the figure of the banner year, 1896, namely, 59 million pounds, would be attained within the near future has not yet been realized. On the contrary, the quantity of exports in 1905 was not quite half so large as in 1904, though more than half in value. However, the conditions for coffee culture are so favorable as regards labor, facilities for transportation, and absence of export duties that the present decline can hardly be considered otherwise than as temporary. This hope is supported by the fact that the exports of coffee have increased from 16,850,000 pounds in 1905 to 38,757,000 pounds in 1907, and their value from $2,241,000 to $4,670,000.

The great development which the sugar industry has assumed since the American occupation is due of course to the fact that the immense market of the United States became free to the Porto Rican product. The coffee industry did not gain by this change to an equal extent, for the reason that coffee had been on the free list before annexation and so remained. Moreover, the Porto Rican coffee belongs to the class of "mild coffees," which are more popular in Europe than in the United States. Almost immediately after the annexation large tracts of lowlands along the coast were bought by Americans and transformed into sugar plantations, which yield a large income to their owners. Lands which had lain idle for many years were thus transformed into sources of wealth, and soon the most desirable sugar lands had been taken up. From the lowlands the sugar plantations are spreading inland to the line beyond which this crop is no longer profitable. With the increase in the crop there came a change of methods. Everywhere the old processes of manufacture were replaced by modern scientific methods, which extract 10 or 11 per cent of sugar from the cane against the 5 or 7 per cent of former days. The coffee and sugar industries are not rivals. Sugar thrives best in the lowlands and coffee thrives best in the highlands. The two areas do not overlap nor even come in contact.

Tobacco is rapidly becoming one of the most valuable staples of export. Large tracts in the interior valleys have been cleared for cultivation and covered with cheese cloth, in the shelter of which the tobacco is grown. Fortunately the best quality of tobacco is found in the highlands and on soils which are unsuitable for other crops, and in this way labor and crops are more evenly distributed over the island. The culture of tobacco is particularly inviting, in that it requires no large capital or expensive machinery and the loss of a crop can be repaired in one year.

The climate, rainfall, and soil of Porto Rico indicate on the whole a good country for corn. Farmers report a crop of 60 bushels on new land of good quality and 20 to 25 bushels on old land. In 1897 Porto Rico exported to Cuba 4,246,776 pounds of corn and 7,946 pounds of corn meal, and to Spain 30,133 pounds of corn. No corn was imported in that year, showing that the production was more than sufficient for home consumption.

Considerable quantities of rice were produced in former times, but as the rice area is coextensive with the sugar area, sugar, being the more valuable crop, tends to drive out the cultivation of rice. Beans are planted for home consumption, though not in sufficient quantity to supply the demand. The same is to be said of sweet potatoes. Bananas are produced in great abundance to furnish shade to the coffee plants and are also grown without reference to coffee. They constitute the principal vegetable food of the laboring class. The product of bananas per acre on rich land is enormous, in some cases as much as 60,000 pounds of fruit per acre. Nearly all kinds of vegetables can be raised. One gardener near Rio Piedras delivered in San Juan several loads of watermelons, each melon weighing 50 pounds or over.

FRUITS.

Tropical fruits are produced in Porto Rico in great quantity and perfection, and the output could be largely increased. The orange tree is at home in this mild climate, secure from frost. It grows rapidly and is hardy, healthy, and a marvelous producer. Lands for orange groves may be purchased for from $5 to $20 per acre. One tree at Mayaguez was observed on which 7,000 oranges were counted. The same remarks apply to limes, lemons, shaddock, and mangoes.

An acre planted in cocoanuts produces about 10,000 nuts annually, worth $150 on shipboard. The cost of harvesting and loading is about $24 per acre. Pineapples grow in all parts of the island and require very little labor, 8,000 to 10,000 plants being set out on an acre. The guava is produced in abundance. Peaches, pears, figs, and grapes grow well. The culture of the grape was discouraged in Spanish days, lest it should compete with the wines of Spain. Experiments have shown, however, that the product of the Porto Rican grape is equal to the best.

Porto Rico is well adapted to stock raising, having abundant pastures of superior grasses (grama, guinea, malojilla) affording pasture all the year round, abundance of pure water, and equable climate. The cattle are of Spanish stock, more or less crossed. The horses also are of Spanish stock, descended from Arabian, and, though small, are very active. Sheep do not prosper, owing to the great humidity. Goats are found in considerable numbers all over the island. Hogs and poultry have thus far been raised but to a limited extent, though the conditions for their maintenance are excellent.

The forests of Porto Rico contain woods of great value, such as Spanish cedar, ebony, and sandalwood. Timber, however, is very scarce, and most of that used in building is imported.

MANUFACTURES.

Manufactures, aside from the establishments connected with coffee and sugar culture, are in their infancy, being limited to cigars and cigarettes, macaroni, chocolate, ice, matches, rum, straw hats, and canning (especially pineapples).

TRANSPORTATION.

Hardly a point of the island is more than 30 miles from tide water, but the coast is remarkably uniform, with few indentations presenting natural harbors. San Juan, on the north coast, is the best port. Others are Ponce on the south coast, Mayaguez on the west coast, and Culebra on Culebra Island, off the east coast. Congress, at its last session, appropriated $750,000 for deepening San Juan harbor to 30 feet. This improvement will be of great importance, as that port is the natural stopping place for vessels on their way to and from the Panama Canal.

No railway has yet penetrated into the rugged interior of the island. The existing railways skirt the coast, almost everywhere in sight of the sea. A circle of rail will soon inclose the island, more than half of it being already completed and most of the rest in course of construction. From Carolina on the north a line runs westward to Camuy; from Ponce on the south a line runs westward and then northward to Aguadilla. The interval between Camuy and Aguadilla (30 miles) was completed toward the end of 1906, affording continuous rail connection between Carolina and Ponce. The road from Guayama, near the southeast corner, westward has been built to within 4 miles of Ponce, and when that interval is bridged it will be possible to travel by rail around the western three-fourths of the island. Of the remaining fourth nearly one-half is already covered by a road centering at Fajardo and by others running between Naguabo and Humacao. The total of first-class macadam roads toward the end of the fiscal year 1907 was 511 miles, of which 335 miles had been built since 1898. Two of these roads cross the island from north to south, one from San Juan to Guayama, the other from Arecibo to Ponce. From Caguas, on the San Juan-Guayama road, a road runs to Naguabo on the east coast, and from Cayey, a little north of Guayama, a road runs westward to Ponce. Other important roads are those from Aguadilla to Lares and from Mayaguez to Las Marias, both in the principal coffee region.

COMMERCE.

The relative positions of the United States and foreign countries in the commerce of Porto Rico have been completely reversed by the change of flag. The change is shown in percentages by the following table:

TABLE 89.—SHARE OF THE UNITED STATES IN THE TRADE OF PORTO RICO, 1895 AND 1905–1907.

YEARS.	Imports into Porto Rico.	Exports from Porto Rico.	Imports and exports combined.
	Per cent.	*Per cent.*	*Per cent.*
1895	23	19	21
1905 (fiscal year)	84	83	84
1906 (fiscal year)	88	82	85
1907 (fiscal year)	88	82	85

The change was due in part to the removal of the tariff barriers between Porto Rico and the United States and in part to the presence of American traders and American capital in the island, while the trade between Porto Rico and Spain and Cuba, formerly free, became subject to tariff after the American occupation.

[b] Including sirup.

TRADE WITH THE UNITED STATES.

Before the American occupation Spain held the foremost place both in imports and in exports, though her predominance was not nearly as decided as is that of the United States at present, as may be seen from the fact that from 1893 to 1896 Spain sent 32.52 per cent of the imports and took 24.82 per cent of the exports from Porto Rico, as compared with the 88 per cent of imports and 82 per cent of exports which now represent the share of the United States in the trade of the island.

The shifting from coffee to sugar as the leading article of export is shown by comparing the figures for 1895 with those for 1907. While in 1901 and 1902 practically all the coffee went to foreign countries, in 1903 a considerable quantity, namely, 6,314,686 pounds, valued at $718,531, went to the United States, but this dwindled to less than half in 1904 and almost altogether vanished by 1907. Practically all the sugar went to the United States, the maximum of sugar (and molasses) sent to foreign countries in one year, namely, $362,351 worth in 1901, having been but 7 per cent of the total of $5,311,610, while in 1907, out of the total of sugar and molasses exported, worth $15,367,810, only $66,596 worth, or less than one-half of 1 per cent, was sent to foreign countries. This quantity consists almost entirely of molasses, the sugar exports to foreign countries having practically ceased. Sugar was the leading article of export to the United States even before the change of flag. In the case of tobacco, too, the exports to foreign countries have progressively declined, till in 1907, when the total tobacco shipments attained the maximum of $5,489,138, the exports to foreign countries formed only $75,318, or 1.4 per cent. A similar phenomenon appears in hides. In 1901 the exports of hides to foreign countries were valued at $42,566; those to the United States at $38,976. In 1907 foreign countries took only $3,556 worth, while the United States took $88,045 worth. In one item only, namely, live animals, have the exports to foreign countries for some time been greatly in excess of the shipments to the United States. By far the greater part of these were cattle shipped to Cuba, which in 1905 amounted to $154,087 out of a total of $280,932 for all live animals, and in 1906 to $127,472 out of a corresponding total of $173,233; but in 1907 the total exports of live animals to foreign countries had dwindled down to less than $10,000.

Aside from the leading articles above mentioned, the only notable products shipped from Porto Rico to the United States are raw cotton, which in 1905 amounted to $105,870 and in 1906 to $118,720, but decreased to $22,410 in 1907; and fruits, the exports of which have rapidly increased from $250,847 in 1905 to $496,694 in 1906 and $779,183 in 1907. Among minor articles exported to foreign countries in 1907 were raw cotton, meat products, and manufactures of straw and palm leaf.

Among the exports of domestic merchandise from the United States to Porto Rico the most important item in 1907 was rice, $4,165,330, shipments having increased steadily from $1,309,725 in 1901. Next in importance came manufactures of cotton, $3,678,247, in which colored cotton cloths represented the sum of $1,644,968. The increase in this item has been almost continuous since 1901, when it represented $1,659,725. Shipments of iron and steel and manufactures thereof were valued at $3,888,637, the largest part of which consisted of machinery, $2,151,393. In this group, too, the steady increase since 1901 was interrupted by a decline in 1904 from $1,434,350 to $1,013,061. Exports of provisions amounted to $2,311,227, the largest items of which were salt pork, $637,819, and lard and lard compounds, $718,578. This group also showed an increase in every year except 1904. Breadstuffs exported amounted to $1,656,436, consisting mostly of wheat flour, $1,168,797. Here again there was an increase in every year except 1904. Other notable exports in 1907 were coal, $176,188; fertilizers, $274,310; fish, $418,700; boots and shoes, $645,234; illuminating oil, $165,921; paper and manufactures thereof, $234,998; silk manufactures, $129,372; soap, $275,561; malt liquors, $211,391; refined sugar, $287,924; tobacco (unmanufactured), $481,490; vegetables, $527,662; wood and manufactures thereof, $1,397,767; manufactures of wool, $260,633.

TRADE WITH FOREIGN COUNTRIES.

The $2,602,784 worth of imports into Porto Rico from foreign countries in 1906 consisted of a great variety of articles, none of which showed a marked predominance. The largest item was fish, of

which $514,733 was imported, and included in this item was $460,860 of dried and salted cod and haddock from Canada. In chemicals, drugs, and dyes France, with $48,681 worth out of a total of $81,031, was far in the lead. Cotton manufactures came mainly from the United Kingdom and Spain. Fertilizers, to the amount of $134,466, came almost exclusively from France. In linens Spain led, closely followed by the United Kingdom. In iron and steel and manufactures thereof France led, followed closely by Belgium and the United Kingdom, while Germany's share was relatively unimportant. Leather and manufactures thereof came almost exclusively from Spain, which also furnished nearly all the olive oil and most of the paper imported from abroad. Nearly all the foreign butter came from Denmark, nearly all the cheese from the Netherlands, and practically all the soap from Spain. In wines Spain was far in the lead, furnishing about as much as France and Italy together. In vegetables, too, the quantities furnished by Spain exceeded the aggregate of all other contributors.

Spain still occupies the leading place among foreign nations in imports into Porto Rico, being closely followed, however, by British North America, with its large exports of fish and lumber.

Among the foreign countries of destination of Porto Rican exports, Spain would occupy the foremost place were it not that Cuba, with her great demand for Porto Rican cattle and coffee, and France, the great consumer of Porto Rican coffee, had for the most part taken the lead of Spain, Cuba in 1901, 1902, 1904, and 1905, and France in 1902, 1903, and 1904. Germany's purchases from Porto Rico, after increasing from 1901 to 1904, dropped to an insignificant figure in 1905. Austria-Hungary's purchases in 1904 reached $469,778, made up entirely of coffee, as was also the case in 1906 and very nearly in the earlier years. Great Britain's purchases from Porto Rico have been insignificant during the last five years.

[A detailed report on economic conditions in Porto Rico, entitled "Commercial Porto Rico in 1906," was published by the Bureau of Statistics of the Department of Commerce and Labor in April, 1907, and may be had on application to that Bureau.]

[a] 1887 to 1897 calendar years, from "Deutsches Handelsarchiv," with exception of 1894. The values given in the original are credited to original Porto Rican trade returns and are given in pesos, which have been reduced to United States dollars at the annual average New York rates of exchange. The values of 1894 represent the calendar year and are from the Porto Rican returns and Bulletin No. 13, 1898, of the Department of Agriculture, the same method of reduction to United States money being applied.
[b] Exports from United States to Porto Rico, calendar year.
[c] Imports into United States from Porto Rico, calendar year.
[d] Calendar year; figures include coin and bullion. From report of War Department.
[e] Six months ending June 30; first four months from report of the War Department; last two months from returns of the collector of customs for Porto Rico.
[f] Fiscal years after 1900.
[g] Shipments to Porto Rico after 1900.
[h] Shipments from Porto Rico after 1900.

UNITED STATES.

[Area (exclusive of Alaska and islands), 3,026,789 square miles; estimated population (including Alaska and Hawaii) June 1, 1907, 85,593,303.]

The total foreign commerce of the United States in the fiscal year 1907 was $3,315,272,503, of which $1,434,421,425 were imports and $1,880,851,078 exports. Of the imports, $747,291,253 were from Europe, $263,576,349 from North America, $160,165,537 from South America, $212,475,427 from Asia, $21,127,466 from Africa, and $29,785,393 from Oceania. Of the exports, $1,298,452,380 were sent to Europe, $349,840,641 to North America, $82,157,174 to South America, $92,703,664 to Asia, $16,511,026 to Africa, and $41,186,193 to Oceania.

Of the total above mentioned, the imports from foreign countries into the noncontiguous territory of the United States (exclusive of the Philippines, which for statistical purposes remain foreign territory) amounted to $8,866,787 and the exports from this noncontiguous territory to foreign countries equaled $6,645,767. Deducting these quantities from the totals of the foreign commerce of the United States, we find that the imports into the continental United States were $1,425,554,638, while the exports from the continental United States were $1,874,205,311. But in addition to this, the value of the merchandise received from the noncontiguous territory of the United States (again exclusive of the Philippines, which are included with the statistics of foreign commerce) was $63,297,144 and the shipments to the noncontiguous territory $58,589,290, making the total merchandise entering the ports of the continental United States $1,488,851,782 and that leaving those ports $1,932,794,601, or a grand total of $3,421,646,383. In this calculation Alaska was considered as outside of the continental United States. If Alaska be excluded, the totals would be: Shipments entering ports of continental United States, $1,476,696,584; shipments from those ports, $1,914,391,836; total trade, $3,391,088,420.

Of the imports for 1907 $149,747,693, or 10.44 per cent, consisted of foodstuffs in crude condition and food animals, and $158,656,263, or 11.06 per cent, of foodstuffs partly or wholly manufactured; the crude materials for use in manufacturing amounted to $477,027,174, or 33.25 per cent; and manufactures for further use in manufacturing to $274,096,464, or 19.11 per cent, while manufactures ready for consumption represented the sum of $364,192,884, or 25.39 per cent, leaving $10,700,947, or 0.75 per cent, for miscellaneous articles. The domestic exports were distributed among the six classes mentioned as follows: Foodstuffs in crude condition, and food animals, $167,348,227, or 9.03 per cent; foodstuffs partly or wholly manufactured, $345,706,609, or 18.65 per cent: crude materials for use in manufacturing, $593,145,135, or 32 per cent; manufactures for further use in manufacturing, $259,414,784, or 13.99 per cent; manufactures ready for consumption, $480,708,667, or 25.93 per cent; miscellaneous, $7,394,612, or 0.40 per cent.

The distribution of exports of manufactures in the fiscal year 1907 was $354,508,845 to Europe, $211,834,090 to North America, $71,083,066 to South America, $56,549,667 to Asia, $35,636,013 to Oceania, and $10,511,770 to Africa.

The census of 1905 showed the total value of all manufactures in the United States to be 14.8 billion dollars, exclusive of mechanical and neighborhood industries, the products of which were estimated by the Census Office at over 2 billion dollars; the value of farm products in 1906 was estimated by the Secretary of Agriculture at nearly 6.8 billions, and the value of products of the mines in 1906 was more than 1.6 billions. The total wealth, as shown by the census reports, was, in 1870, 30 billion dollars; in 1880, 42½ billions; in 1890, 65 billions; in 1900, 88 billions; and in 1904 more than 107 billions, while the per capita wealth has grown from $780 in 1870 to $1,310 in 1904. The total money in circulation on June 1, 1907, was $2,772,956,455, or an average of $32.22 per capita. The value of the internal commerce of the United States in 1906 is estimated at 26 billion dollars, or a sum equal to the entire international commerce of the world.

A series of tables showing the commerce and commercial development of the United States for a term of years and the details of its commerce with the various countries of America will be found in the closing pages of this volume. They show in detail the trade with the various American countries and in condensed form the national commerce and development of internal trade conditions from 1800 to 1907.

STATISTICAL APPENDIX.

FOREIGN COMMERCE OF THE PRINCIPAL COUNTRIES OF AMERICA.

IMPORTS INTO AND EXPORTS FROM PRINCIPAL COUNTRIES OF AMERICA IN SPECIFIED YEARS.

[a] Total trade. Data for the years 1835 to 1890 taken from E. Levasseur's Le Brésil (Paris, 1899); trade figures for the years 1893–1898 are British estimates reproduced by the Bureau of the American Republics in its publication entitled "United States of Brazil: A Geographical Sketch" (Washington, 1901); figures for 1900 and subsequent years are taken from the official Brazilian trade statistics. Rates of exchange of the milreis taken from official records.

[b] No data available. [c] Merchandise only. [d] Preliminary data. [e] Prior to 1868 the interprovincial trade is included.

[f] Including small quantities of gold dust, nuggets, and metallic silver, which are not included in the precious-metals statement.

[g] Gold-bearing quartz, dust, nuggets, etc. [h] Silver, metallic, including silver ore.

[i] Figures for Quebec and Ontario only for the years 1858 to 1867, inclusive.

[j] Including foreign and domestic bullion and specie, but excluding foreign gold dust, nuggets, and metallic silver.

[a] Total trade, including gold and silver. Figures for 1883 to 1893 and for 1902 to 1905 from the official Resúmenes Estadísticos; figures for the other years from the Memorias de Hacienda.

[b] The Chilean peso has been taken as equivalent to the United States dollar for the period to 1884; to 75 cents from 1885 to 1896, and to 36.5 cents since 1897. Data for the period prior to 1890 taken from the Resúmen de la Hacienda Pública de Chile, 1901 (Spanish and English); for the years 1890 to date the figures are those of the Annual Estadística Comercial de la República de Chile.

[c] Total trade. Values up to 1891 stated mostly in currency, in subsequent years mostly in gold; for this reason no attempt has been made to reduce the original values to terms of American currency. The trade of the free ports, Panama and Colon, does not figure in the above table.

[d] No data.

[a] Total trade.
[b] In the case of imports the original figures are given in terms of gold pesos, which were taken as equivalent to United States dollars; in the case of exports the original values were stated until 1905, inclusive, in terms of silver pesos, which were reduced to United States dollars by using the estimates of the Director of the United States Mint.
[c] The values of the gold exports as originally stated have been reduced to United States currency at the rate of 1 peso=$0.984, until 1905, inclusive.
[d] No data available.
[e] Contains imports of gold and silver, not separately stated in the preliminary report.

[a] Fiscal years ending June 30.

[b] Prior to 1900 Porto Rico and Cuba are classified together as "Spanish West Indies."

[c] Conversions of the Honduran dollar into United States currency have been made at the rate of 74.9 cents in 1890, 71.5 cents in 1891, and 63.8 cents in 1892–3. On October 15, 1894, the currency of British Honduras was changed from silver to gold, and the gold dollar of the United States was made the standard coin of the colony. In consequence of this change and the uncertainty in the rate of exchange of the sol in 1894, correct values of the imports and exports for that year could not be obtained. For converting the values given in the original trade returns, the sol has been taken as equal to 50 cents.

[d] Stated as Central American States.

[e] From British diplomatic and consular reports. Original values stated in terms of gold, except exports for 1901, which were converted at the rate of 1 peso=32.2 cents. No complete data available for years for which no figures are given

a Not separately stated.

b Apparent loss in exports to the United States is accounted for by the fact that during the first nine months of 1899 about $7,000,000 of tobacco and cigars destined for the United Kingdom was shipped via New York and reported as exports to the United States, the countries of ultimate destination not being given.

c Australasia.

d British Australia.

e Includes $219,000 in sealskins from the South Atlantic.

f Calendar years 1890–1893; subsequently fiscal years ended March 31 of the following year. Imports and exports of bullion and specie included.

g Dutiable articles "warehoused for exportation and transshipped" included in both imports and exports until March 31, 1900, only. The value of these articles in subsequent years was: 1900–1901, $420,000; 1901–2, $574,000; 1902–3, $354,000; 1903–4, $274,000; 1904–5, $287,000; and 1905–6, $380,000; 1906–7, $279,000.

a Included with "All other countries."
b British Guiana only.
c Includes both foreign and domestic merchandise.
d United Kingdom only.
e Fiscal years, compiled from the Boletin de Estadistica Fiscal. Bullion and specie included. The conversion of Mexican dollars has been made at the following rates: 1893, 66.3 cents; 1894, 53.5 cents; 1895, 50.2 cents; 1896, 53.4 cents; 1897, 50.9 cents; 1898, 45.1 cents; 1899, 47.6 cents; 1900, 47.2 cents; 1901, 49.1 cents; 1902, 44.1 cents; 1903, 40.2 cents; 1904, 45 cents; 1905, 46.5 cents.
f About 90 per cent of the gold exports go to the United States, and the value of exports to United States should be increased correspondingly.

IMPORTS INTO AND EXPORTS FROM PRINCIPAL COUNTRIES OF AMERICA, 1891–1906, BY COUNTRIES—Continued.

[a] Included in "All other countries." [b] From British Consular Report No. 3870. [c] Includes both foreign and domestic merchandise.

[d] Years 1897–1906 ended June 30. Prior to the year 1896–97 imports in bond from the United States through Canadian ports are included with the imports from the Dominion of Canada, but in that and subsequent years they are credited to the country of origin. The figures in these statements include imports and exports of bullion and specie. Records for 1892 destroyed by fire.

[e] Values, as expressed in sales, converted at the rate of 48.665 cents. Compiled from British Diplomatic and Consular Reports, 1891–1894, No. 1866; from Commercial Monographs of 1899, years 1895–96; from Estadistica General de Adunanas de Peru for 1898, years 1897–98; from British Consular Report No. 3281, years 1899–1901; from Deutsches Handelsarchiv for June, 1907, years, 1902–05.

[f] No data.

[g] Includes imports into Iquitos amounting to $912,663, of which countries of origin are unknown.

[h] Includes exports from Iquitos amounting to $1,390,324, of which countries of destination are unknown.

[a] Compiled from the Anuario Estadístico de la República Oriental del Uruguay.

[b] Figures for 1901 include fifteen months ended March 31, 1902; for 1902, the twelve months ending March 31, 1903; for years subsequent to 1902, calendar year statements.

[c] Not separately stated.

[d] Probably includes transshipments.

[e] For 1893 and subsequent years the value of imports includes an estimated amount for freight and value of packages; in previous years the value was that of the goods at the port of shipment. The amount of the above charges was approximately 21.4 per cent of the total value of the imports in 1893, 15.9 per cent in 1894, and 13.3 per cent in 1895; the percentages in subsequent years can not be stated.

[f] Includes $186,703 of bunker coal, reported for first time as an export in 1906.

[a] Probably includes transshipments.
[b] The value of bunker coal is included in the imports but is excluded from the exports.
[c] General exports prior to 1899.
[d] Includes $292,000, value of a cargo of coal recovered from a wreck and exported.
[e] Import figures for 1896 to 1899 include an estimated amount for freight, insurance, and value of package; figures for 1899 are exclusive of imports and exports of bullion and specie. Figures for 1903 to 1906 are for fiscal years ended March 31 of the year following.
[f] Exclusive of the value of goods (35,000 dollars) imported for hurricane relief purposes from Great Britain and British colonies.
[g] General exports.
[h] Including an estimated amount for value of packages.

[a] Including transshipments; exclusive of trade between Trinidad and Tobago. Years 1901 to 1906 ended March 31 of the following year.
[b] Including Cuba and Porto Rico.
[c] The increase is largely due to the fact that during 1905–6 Trinidad became the transshipping center for Royal Mail steamers.
[d] Data for 1891 to 1898 are for Trinidad only, exclusive of its trade with Tobago.
[e] Total for British North America.
[f] Less than $500.

IMPORTS INTO AND EXPORTS FROM PRINCIPAL COUNTRIES OF AMERICA, 1891–1906, BY COUNTRIES—Continued.

[a] Inclusive of the value of the ore exported.

[b] Includes for periods 1890, and 1893 to 1900 estimated amount short in stated value of exports to the United States, averaging about $5,000,000 annually.

[c] Conversions of the Honduras sol into United States currency have been made at the rate of 74.9 cents in 1890; 71.5 cents in 1891; 63.8 cents in 1892 and 1893. On October 15, 1894, the currency of British Honduras was changed from silver to gold, and the gold dollar of the United States was made the standard coin of the colony. In consequence of this change and the uncertainty in the rate of exchange of the sol in 1894, values of the imports and exports for that year can not be considered as correct. For converting the values given in the original trade returns, the sol has been taken as equal to 50 cents.

[d] Including lamps and lamp ware.

[a] A small quantity of this (16,248 pounds, in 1904) is called in the original "cebada tostada" (roasted barley), meaning probably malt. In 1905 the figures given include 3,873,394 pounds of "cebada malta," malt barley.
[b] Thousand pounds.
[c] Included in "All other."
[d] Total value of all ores mentioned, the values of which are not separately stated.
[e] Including 2,040 pesos of coin, metal not specified.
[f] Not stated.

[a] Fiscal-year figures. Beginning July 1, 1900, the statistical reports to the Division of Insular Affairs were based upon a new schedule, giving the classification of commodities imported and exported much more in detail than were required by the schedule in effect prior to that date.

[b] Includes salted or pickled meats of all kinds.

[c] Lard and tallow.

[d] Butter and oleomargarine.

[e] Wines and cordials.

[f] Malt liquors and cider

a Represents the value of the silver as well as of the copper and lead contained therein.
b Data for 1906 from British Consular Report No. 3870.
c Includes all live stock.
d Specified as farinaceous foods.
e Includes all textiles.
f Includes leather goods.
g Specified as vegetable oils, juices, etc.
h Includes soaps, chemicals, etc.
i Includes farm and dairy products.
j Includes beer and cider.
k No data.
l Includes fruits and plants.
m Gold and silver coin.

[a] Whisky only.
[b] Excluding cigars.
[c] Figures for 1901 are for fifteen months ended March 31, 1902; those for 1902 for the fiscal year ended March 31, 1903, all other for the calendar years stated.
[d] No figures available
[e] For 1893 and subsequent years the value of imports includes the estimated charges for freight, insurance, and value of packages. In prior years the value was that of the goods at the port of shipment. The amount of the charges was approximately 21.4 per cent of the total value of the imports in 1893, 15.9 per cent in 1894, and 13.3 per cent in 1895. The percentage in subsequent years can not be stated.
[f] No data.

COMMERCE OF THE UNITED STATES AND LEADING EUROPEAN COUNTRIES WITH SPECIFIED COUNTRIES OF AMERICA, BY YEARS AND BY PRINCIPAL ARTICLES.

COMMERCE OF THE UNITED STATES AND LEADING EUROPEAN COUNTRIES WITH SPECIFIED COUNTRIES OF AMERICA, 1881-1906.

[These tables relate only to commerce with those countries of America whose statistical statements are incomplete. Shipments of gold and silver are not included. To make this statement more complete the data of the general trade were taken for Germany and France, and in the case of the United States and the United Kingdom the exports of foreign merchandise were included.]

[a] Included under Sweden and Norway prior to 1903.
[b] Sweden only after 1902.
[c] Included with Colombia prior to January 1, 1904.
[d] Figures relating to Hawaii and Porto Rico discontinued in statement of foreign trade after they became customs districts of the United States in 1900.

PRINCIPAL ARTICLES FORMING THE IMPORT AND EXPORT TRADE OF THE UNITED STATES.

The tables which follow show the movements in the principal articles forming the imports and exports of the United States for specified years. The articles enumerated form more than three-fourths of the total value of the imports and exports of the country, and these tables showing the movements in such articles at intervals for a long term of years offer facilities for an analysis of that trade.

IMPORTS INTO, AND DOMESTIC EXPORTS FROM, THE UNITED STATES OF PRINCIPAL ARTICLES FOR SPECIFIED FISCAL YEARS, 1875 TO 1907.

IMPORTS.
